1 INTRODUCTION TO TOPS

TOPS or TP Operational Processes & Standards is a comprehensive framework developed by TP to ensure operational excellence across operations.

1.1 Mission Statement

TP Operational Processes & Standards (TOPS) aims to standardize operational and performance management processes across all operations globally. Beyond providing a framework for Supervisors, Operations Assistant Managers (OAMs), and Operational Managers (OMs) to guide their daily, weekly, and monthly activities related to people performance improvement and development, with a focus on achieving consistent results, TOPS represents TP operational excellence and culture.

1.2 Documentation Purpose

This document serves as a comprehensive reference guide for deploying both mandatory and recommended TOPS practices. It outlines core operational standards and procedures for managing TP Operations. As a reliable source of truth for TOPS, it details the essential processes applicable to TP centers globally.

The objectives of the TOPS document are to ensure:

- **Cultivating a Unified Culture:** Establish a unified understanding of TOPS practices among employees across departments and levels within the organization. Its main purpose is to promote the consistent use of these practices in all centers around the globe.
- **Standardized Approach for Consistent Operations Management:** Ensure that the delivery of TOPS processes remains consistent across various teams and locations. Operational practices not described in this document are not part of TOPS.
- **Operational Consistency across Environments:** Establish a standard that is consistently upheld across both office and remote work environments, ensuring uniformity in performance and operational excellence throughout all TP settings.
- **Building Operational Excellence:** This core framework of TP Operational Management outlines our ongoing efforts to define the best operational management practices. Drawing on over 40 years of expertise in managing operations, this document also reflects our commitment to continuous improvement by incorporating tested best practices from multiple geographies within the group.

1.3 TOPS Guiding Principles

The following are the guiding principles adopted during the process design. It is important to refer back to these when interpreting the process requirements:

- **People-First:** At the heart of our operations is a commitment to our people; valuing their growth, well-being, and contributions as our greatest assets.
- **Excellence in Delivery:** We strive to be the best, consistently topping stack rankings through superior performance and relentless pursuit of perfection. Green is not green unless we are on the top.
- **High Tech Operation:** Ensure streamlined and stable operations that leverage Artificial Intelligence (A.I.) and various technologies to handle repetitive tasks, allowing our professionals to focus on customer needs, enhance decision-making, streamline workflows, and personalize customer interactions. Our operations are designed to continuously adopt new technologies, staying at the forefront of operational advancements
- **High Touch Operation:** Cultivating Emotional Intelligence (E.I.) within our teams to foster empathy, develop emotional bonds, improve communication, and long-lasting customer relationships.
- **Reliable Efficiency:** Maximizing productivity with minimal waste, demonstrating our commitment to smart resource management and dependable service delivery that customers can trust and value.
- **Customer Focus:** Placing customer satisfaction at the heart of our service delivery, driving us toward excellence and fostering a mindset of continuous improvement. Guided by insights and feedback, we support our partners in achieving their organizational goals, meeting targets, and continuously helping them become more efficient.
- **Collaboration:** Encouraging a culture where teamwork and shared goals lead to collective success. One TP culture.

1.4 TOPS Application Rules

1.4.1 RULES OF ENGAGEMENT

TOPS is a mandatory framework for all operations in Core Services except:

1. Client contract does not allow TP to deploy any tools or processes
2. Client pays overhead resources and decides the management model
3. Human Resources Outsourcing (HRO) Operations
4. Operations going dark (30 days prior to service end date)
5. Pending work councils or unions approvals

Any exceptions to the cases above must be approved by the Global Team and President of the Region. Exceptions requests must be submitted via Service Now.

1.4.2 ADAPTATION TO OPERATIONAL REALITIES

Despite being mandatory for all operations (excluding the use cases described above) regardless of size, staffing ratios, or the operational staff's ability to access the TP network, its application may suffer variations based on the following criteria:

1. Availability of mid-management roles (it varies, for example, if the OAM role does not exist)
2. Client enforcement of specific operating frameworks
3. Whether operational staff can access the TP network/TP-defined TOPS digital system.

Key Principles:

- a) **M3, MAP, CES, Outlier Mgmt (Client-Level Events) remain unchanged for every scenario:**
 - Regardless of the operation's size, these events are management events and are required for any operation.
 - These are operational control gates that must happen at the defined frequency to promote proper development of the operation.
 - It is, however, understandable that, for example, a Monthly Management Meeting (M3) for a client with 320 FTEs that has one LOB might not take as long as one for a client with 650 with multiple LOBs. However, M3 is still required to review pre-delivery performance and conduct a checkpoint to ensure oversight of operational and contractual commitments.
 - For situations where there is limited access to the TP system/network, TP Manager levels have access to the TP network and the ability to apply those defined events.
- b) **TOPS promotes Avoiding Duplication and Ensuring Practical Application of TOPS:**
 - Work duplication must be avoided when the client requires specific operational frameworks.
 - Therefore, some events that are already documented in a specific client digital system are exempt from completion in the defined TOPS digital app.
 - In cases where Supervisors and CEs (CE) have limited or no access to the TP network, some events are exempt due to the difficulty of application without proper digital support tools.

1.4.3 OVERVIEW OF APPROVED ADAPTATIONS BY OPERATIONAL SETUP

Minimum Requirement per operating setup	1. Availability of mid-management roles								
	USE CASE A) Normal Scenario			USE CASE B) OAM reporting directly to OD or above (no OM)			USE CASE C) Operation only with Supervisor without OAM and/ OM		
	OM,OAM,Supervisor			OAM,Supervisor			Supervisor		
Event Name	Application	Frequency	Owner	Application	Frequency	New Owner	Application	Frequency	New Owner
Monthly Management Meeting (M3)	Mandatory	Monthly	OM	Mandatory	Monthly	Operations Director (OAM's Direct Manager)	Mandatory	Monthly	Operations Director
OAM Dev & M3 Review	Mandatory	Monthly		Mandatory	Monthly		Mandatory	Monthly	
Customer Experience Session (CES)	Mandatory	Monthly		Mandatory	Monthly		Mandatory	Quarterly	
Monthly & QTR Performance Review OAM	Mandatory	Monthly		Mandatory	Monthly		Not applicable		
MAP Meeting	Mandatory	Monthly	OAM	Mandatory	Monthly	OAM	Not applicable	Replaced by M3	
DSM	Mandatory	Daily		Mandatory	Monthly		Not applicable		
Supervisor Shadowing & Observation	Mandatory	Monthly		Mandatory	Monthly		Not applicable	Replaced by OAM Dev & M3 Review.	
SUP Dev & MAP Review	Mandatory	Monthly		Mandatory	Monthly		Not applicable		
Monthly & QTR Performance Review Supervisors	Mandatory	Monthly		Mandatory	Monthly		Mandatory	Quarterly	Operations Director
Daily Game Plan Execution	Mandatory	Daily	Supervisor	Mandatory	Daily	Supervisor	Mandatory	Daily	Supervisor
CE Coaching (All CE's)	Mandatory	Monthly		Mandatory	Monthly		Mandatory	Monthly	
CE Monthly Performance Review	Mandatory	Monthly		Mandatory	Monthly		Mandatory	Monthly	
CE Development Plan	Mandatory	Monthly		Mandatory	Monthly		Mandatory	Monthly	
Outlier Management	Mandatory	No changes	NA	Mandatory	Monthly	No changes	Mandatory	No changes	No changes
PSP & LSS	As Required	As required	OAM	As Required	As required	Operations Director	As Required	As required	Operations Director
Coaching Intensity Survey	Mandatory	Monthly	CE	Mandatory	Monthly	CE	Mandatory	Monthly	CE

Minimum Requirement per operating setup	2. Operations under client client-requested operational framework		3. TP Operational Staff without access to TP network		
Event Name	Application	Comments	Application	TOPS Registration in TP System	Comments
Monthly Management Meeting (M3)	Mandatory	These are TP managerial TOPS events at the operational level (not employee level). They apply to any program, client, vertical, or business type and are key elements of the TOPS operational cascade model—and essential for operational success.	Mandatory	If the OM has access to the TP network: TP TOPS Digital System. If the OM does not have access to the TP network: Excel file template.	Regardless of access to the TP network, this group of defined events is mandatory. These are program management events defined in TOPS to drive overall delivery improvement. Adoption will not be monitored via PHAROS but will be assessed during GAP assessments and audits.
OAM Dev & M3 Review	Mandatory		Mandatory		
Customer Experience Session (CES)	Mandatory		Mandatory		
Monthly & QTR Performance Review OAM	Mandatory		Mandatory		
MAP Meeting	Not applicable	If it is demonstrated that a similar event is performed in the client system.	Mandatory	If the OAM has access to the TP network: TP TOPS Digital System. If the OM does not have access to the TP network: Excel file template.	To perform these events Staff must use defined TOPS templates and apply a working methodology to support TOPS application (Excel based work model for example).
DSM	Not applicable		Mandatory		
Supervisor Shadowing & Observation	Not applicable		Mandatory		
SUP Dev & MAP Review	Not applicable		Mandatory		
Monthly & QTR Performance Review Supervisors	Mandatory	TP-defined standard model applicable to all Supervisors.	Mandatory		
Daily Game Plan Execution	Exception	If it is demonstrated that a similar event is performed in the client system.	Exception	approved exception	
CE Coaching (All CE's)	Exception		Mandatory		
CE Monthly Performance Review	Exception		Exception	approved exception	
CE Development Plan	Mandatory	TP-defined standard model applicable to all Customer Experts.	Exception		
Outlier Management	Mandatory	Operations Management teams with access to TP systems are responsible for executing TOPS events. These deliverables apply across all programs, clients, verticals, and business types, and are key components of TP's TOPS framework.	Mandatory	PBI or Excel.	Work with client to create mgmt model.
PSP & LSS	As Required		As Required	As Required	
Coaching Intensity Survey	Mandatory		Exception	approved exception	

Note: Please find the editable document in [TOPS SharePoint](#).

1.5 TOPS Organization at TP And POCS

1.5.1 GLOBAL TOPS TEAM

The TOPS Global team oversees updating and maintaining this manual. This team includes the following members. They are also available to help Regional and Local Teams with any questions about the document and the TOPS framework. They handle the change log requests, review them, and decide when to release new versions.

Name	Email	Scope
Fábio Luís	fabio.luis@TP.com	TOPS, Global Deployment
Florence Orzakiewicz	f.orzakiewicz@TP.com	Global TOPS
Agnieszka Zagorska	agnieszka.zagorska@mj.TP.com	TOPS Tools
Robert Mihai Banica	robert-mihai.banica@majorel.com	TOPS Tools
Hugo Coelho	hugo.coelho@TP.com	TOPS Reporting
Amgad Salah	amgad.salah@majorel.com	Global Audit

1.5.2 TOPS REFERENCE DOCUMENT STEERING COMMITTEE

The group of senior executives who participated in and contributed to shaping and defining the TOPS version 24.0.0 process is listed along with the roles they held at that time.

NAME	EMAIL	ROLE	SCOPE
Augusto Martinez Reyes	augusto.martinezreyes@TP.com	President MLH	MLH
Christian Buschmeier	christian.buschmeier@mj.TP.com	CSPO	Global
Dimitris Kerastaris	dkerastaris@TP.com	COO	GSM
Jignasha Marchant	jignasha.marchant@TP.com	VP Operations	USA
João Cardoso	joao.cardoso@TP.com	CIDO	Global
Karim Zakhari	karim.zakhari@TP.com	VP SP	Global
Karine Jan	k.jan@TP.com	CEO	France
Luis Iglesias Esparza	luis.iglesias@TP.com	COO	LATAM
Mina Victor	mina.victor@TP.com	VP Operations	Egypt
Mohamed Tawfik	mtawfik@TP.com	CEO	Egypt
Nondas Platis	nplatis@TP.com	COO	Greece

1.5.3 TOPS COMMUNITY

The TOPS community is a select group of individuals responsible for driving continuous improvement, evaluating new ideas and requirements, and proposing standard changes. They also support local execution, enablement, training, and adoption. As local leaders, they serve as the first point of contact for operational questions and concerns.

Please refer to the global [TOPS SharePoint](#) for the updated community list on demand.

1.5.4 TOPS RESOURCES

RESOURCE	PURPOSE	LINK
GSPO SharePoint	Central repository for all TOPS-related materials, including the reference document, support templates, FAQs, and more. This should be considered the single source of truth for official resources.	Global Standards & Processes Office
TOPS Co-Pilot	AI assistant serves as the first point of contact for questions and queries related to the TOPS process.	Global Standards & Processes Office
Service Now	Ticketing system for submitting questions, process improvement suggestions, change requests, and exception approvals. This acts as the second level of support after consulting Co-Pilot.	Please contact your local process TOPS leader.
PHAROS	Global management cockpit for monitoring TOPS adoption across countries, clients, and down to individual contributors.	Pharos - Home - Power BI
TOPS App	End-to-end digital tool for registering TOPS events. Currently being rolled out and will progressively replace BMS.	TOPSapp Sharepoint
BMS and RISE	Existing digital tools used across most operations to support TOPS event registration.	URL varies by geography.
TP Standard Compliance	Global reporting system that provides compliance scores for TOPS and other standards. Includes audit results and self-assessments submitted via the TOPS audit grid in BMS.	Global Summary - Global TP Standards - Power BI
E-learnings	Key training resources for CEs, Supervisors, Managers, and OD-level roles. For non-CE roles, training must be complemented by reading the TOPS Reference Document.	MyTP: CE MyTP: TOPS24 Training for OD and above MyTP: TOPS24 Training for Supervisors, OAM and OM

2 TOPS ESSENTIALS

This section aims to provide the essential knowledge needed to understand the remainder of the document. It covers key terms and details on how to execute and apply TOPS in day-to-day operations.

2.1 Reference Document Core Terminology

Standardizing the names ensures consistency, clarity, and efficiency in communication, data interpretation, and reporting across the organization. It is important to use TP's official terms only. The tables below outline the key terminology essential for understanding the rest of this document.

2.1.1 GENERAL TERMS

TERM	DESCRIPTION
BEST (s)	Baseline Enterprise Standards for TP is a set of operating standards for the various departments.
Billing Model	The billing model concept is used to invoice the client, such as per transaction, per production hour, others.
BMS	The TP system is used for employee management and to manage the TOPS Process as Event Management platform. It integrates various functions to streamline operations, monitor performance, and ensure compliance with company standards.
Cloud Campus or "CC"	Operations operating in a work-at-home setting.
DMAIC	An acronym for Define, Measure, Analyze, Improve, Control. It is a data-driven improvement cycle used for optimizing and stabilizing business processes and designs in Lean Six Sigma.
KPI	Key Performance Indicators (KPI) is a measurable value that demonstrates how effectively a company or individual is achieving key business objectives.
Learning Curve	A graphical representation of the rate at which a person or organization improves performance or efficiency over time with repeated experience or practice. It illustrates how proficiency increases as tasks are performed more frequently, typically showing initial rapid progress that gradually slows as expertise is gained.
LSS	Lean Six Sigma (LSS) is a methodology that combines Lean manufacturing and Six Sigma to improve efficiency and quality by eliminating waste and reducing variation in processes.
Monthly Action Plan KPI Matrix	An Excel file designed to help OAM define the KPI in focus for the action plan.
New Hires	Term associated with the CE population that has less than 30 days in production.
PHAROS	A global Power BI app that tracks various TOPS and quality metrics, like Supervisor coaching activities, Feedback, others. It can be accessed via PHAROS .
PI	Performance Indicator (PI) is a metric used to assess the performance of an organization, team, or individual. It is often used interchangeably with KPI, though it can be broader and less critical than KPIs.
Pulse Check	Often used to monitor employee engagement or customer satisfaction, a quick assessment or survey is conducted periodically to gauge the current status, opinions, or feelings of a group.
Stack Rank	A method of ranking employees, projects, or items in order of performance, priority, or importance. It helps in identifying top and low performers or priorities.
TCD	Top Contact Drivers (TCD) are the primary reasons or issues that generate the highest volume of customer calls. Identifying TCDs helps in addressing common problems and improving customer service efficiency.
TOPS App	A platform designed to support and optimize the execution of TOPS events. This platform is currently under development and is targeted for global deployment in the first half of 2025.
VSF	The Variation Significance Factor (VSF) is a measurement to determine the degree of variation in a process by comparing the standard deviation to the mean.
RISE	The TP system used to manage the TOPS Process as Event Management platform mainly for former Blue Operations.

2.1.2 POSITION NAMES

POSITION NAMES	ABBREVIATION	DESCRIPTION
CE	CE	Customer Service team members who handle interactions are equivalent to what clients refer to as CEs or Customer Service Representatives.
Supervisor	SUP	Leading and managing a team of CEs.
Operations Assistant Manager	OAM	Leading and managing a team of Supervisors.
Operations Manager	OM	Leading and managing a team of OAMs.
Operations Director	OD	Leading and managing a team of OMs. May also manage directly OAMs.

2.2 TOPS Digital Support Ecosystem

2.2.1 TOPS DIGITAL SUPPORT ECOSYSTEM OVERVIEW

TOPS is a structured process that requires a digital support system to document, guide, and equip teams with the necessary toolkit for driving people and performance development. The current TOPS digital ecosystem consists of:

- **Event Management Platform** – Supports the management and registration of daily TOPS events for performance improvement and people development, from account level down to individual contributors (e.g. BMS, RISE, TOPS App).
- **Power BI** – Used for tracking primary KPIs and generating client dashboards. It delivers customized operational reporting from CE to Manager level (*refer to [BEST BI for Operational Reporting requirements](#)*) to support the TOPS application.
- **Excel** – Primarily used to support OM and OAM for some TOPS events not documented in the used Event Management Platform when using BMS or RISE (TOPS App offers a one-office solution for TOPS).

2.2.2 APPROVED EVENT MANAGEMENT PLATFORMS

The tools listed below are authorized for managing and registering TOPS events. The use of any other tools is considered non-compliant, and you must engage with the Global TOPS team for guidance. In the TOPS time spent research document, you will find the mapping of the tools that can be used for each specific TOPS event.

- **BMS (TP proprietary, no extra cost):** The primary tool for capturing event data. It may be replaced by RISE in locations where BMS access is unavailable. Countries currently using BMS are expected to continue doing so.
- **RISE (TP proprietary, no extra cost):** Available for countries or operations not currently using BMS. They may choose to adopt RISE or deploy BMS.
- **Central (third-party solution):** For operations that have invested in a digital tool with integrated performance gamification features. These operations can use Central to comply with TOPS without duplicating event registration in TP proprietary tools (see TP Gamification section). To know more about how to use Central for tool pls contact the Global TOPS Team.
- **Client-Defined Tools:** When a client mandates the use of a specific tool, TOPS encourages avoiding duplication. Events recorded in the client's system do not need to be re-entered into TP tools.

2.2.3 COMPLIANCE CONSIDERATIONS

TOPS compliance is measured through a combination of event frequency, process execution, and KPI tracking. To ensure accurate analytics and global reporting (PHAROS and TP Standards), local Process teams must keep the platform used for Event Management updated for each operation updated in the designated location defined by the Global TOPS Team. Failure to do so may result in inaccurate reporting to leadership.

2.2.4 TOPS APP – ONE OFFICE PLATFORM

A pilot is underway to test a unified platform that will serve as a one-stop solution for managing all TOPS events—from account to individual level. The goals are to:

- Replace the outdated 2012 BMS form-based system with a more agile, user-friendly platform that supports future AI integration.
- Provide a fully digital, end-to-end solution for all operational roles (CEs, Supervisors, OAMs, OMs), eliminating the need for Excel, BMS, or parallel systems.
- Consolidate the Blue and Pink environments into a single TOPS application.
- Improve analytics and visibility for senior operations by tracking not just event completion, but also the quality and consistency of action plans in daily performance and people development.

2.3 COPC and TOPS

For questions related to COPC and TOPS alignment please engage with your local Process owner and or with Global Teams.

2.4 Guidelines For Managing Meetings

To ensure the effectiveness and efficiency of all management events, such as meetings, the following best practices should be implemented. These practices apply to all CEs, Supervisors, OAMs, and OMs:

- **Always review previous meeting forms and evidence:** Before attending a meeting, review the forms and evidence from previous meetings to stay informed and prepared.
- **Book time to prepare for meetings:** Allocate enough time before each meeting to prepare for it, ensuring you have all necessary materials and information.
- **Book meetings in advance:** Schedule meetings well in advance to ensure availability and proper planning for all participants.
- **Include the agenda in the body of the invite:** Always include the meeting agenda in the body of the email invitation to provide clarity and focus for all attendees.
- **Setting clear objectives:** Define the purpose of the meeting and establish clear objectives for what is to be achieved by the end of the session.

2.5 Engaging Remote Teams through Video (Cloud Campus)

Because nonverbal communication is so important, video communication helps us communicate more clearly with our teams. However, while communication is the main aspect, there are also other factors we need to consider

- **Engagement:** A visual setup helps teams stay more engaged, fosters a sense of camaraderie, and encourages stronger interaction. Knowing the faces of your supervisor, colleague, or teammate keeps teams connected and aligned. Face-to-face communication is the most effective way to interact, so let's take advantage of video technology to replicate "working closely with your team."
- **Security:** Video communication is a valuable tool for supporting security checks and clean desk audits. Security involves a set of technical systems, tools, and processes designed to protect the information and technology of a company, as well as to protect yourself and your job. It's about making sure that we have regulations and guidelines in place—and that we follow them.

The webcam plays an important role in remote operating setups (such as Cloud Campus). However, depending on the legislation in each country, its adoption and usage may vary. (Please check with your local privacy and HR teams to learn more about webcam usage policies in your country.) You must also be aware of local nuances related to privacy.

To learn more about video engagement guidelines, how to promote a video-connected environment, and the do's and don'ts of using a webcam, please enroll in the eLearning course below:

- Non-CE Roles: [MyTP: Course and Class Details](#)

- CEs: [MyTP: Course and Class Details](#)

TOPS requires, for compliance purposes, that:

1. Remote teams (from CEs to OMs) are provided with webcams and the necessary tools to connect via video. Each operation is responsible for defining its own usage parameters, ensuring they foster an engaging environment and a positive remote work dynamic.
2. Operational roles complete the video engagement guidelines eLearnings.

2.6 Behavior Vs. KPI Management

While behavior management and KPI management have distinct focuses and methods, attention to both is crucial for achieving high performance. Separately, they provide the necessary tools and strategies to address both the human and operational aspects of an operational process. Together, they constitute a robust framework for improving organizational performance:

- **Behavior Management** drives the attitudes and actions that lead to achieving KPI targets.
- **KPI Management** provides data and benchmarks that guide effective behavior management.

Key aspects:

- **Aligning Behaviors with Business Objectives:** Behavior management strategies can be designed to align with business objectives measured by KPIs. For instance, if the KPI in focus is reducing average handle time (AHT), behavior management can focus on promoting efficient customer problem-solving techniques among the CEs.
- **Feedback Loop:** There is a continuous feedback loop where behavior management influences KPI outcomes, and KPI results inform behavior management strategies. Positive KPI results can validate the effectiveness of behavior management approaches, while poor KPI performance can signal the need for changes in management practices.
- **Cultural Impact:** Effective behavior management can create a culture of accountability and high performance, where employees are not only aware of KPI targets but are also committed to achieving them through the adoption of positive behaviors and attitudes.
- **Employee Empowerment:** Empowering employees with the knowledge of how their behaviors directly impact KPIs can lead to greater ownership and responsibility for their performance. This, in turn, fosters a proactive approach to improving both individual and organizational outcomes.

Below are a few examples that can help illustrate the relationship between behavior management and KPI management:

Impact on KPI(s)	Behavior	Behavior Definition	Behavior Impact	EXAMPLE
Customer Satisfaction (CSAT), First Call Resolution (FCR), Net Promoter Score (NPS)	Understanding the emotions/needs.	Understand the customer's request, needs, previous experience, and the situation's urgency. Pay attention not only to the message or emotions but also to the way of thinking and expressing. Demonstrate willingness to work with the customer.	Employees who actively listen to customers can better understand and resolve issues quickly.	Scenario: A customer calls to request an invoice. However, the invoice takes 30 minutes to be delivered to the customer's inbox. Behavior: Identify the invoice request as being associated with the customer's fear of being wrongly charged, ask the appropriate probing question, educate their fear, educate the customer about charges, and address their concerns. Outcome: Addressed the customer's true need to prevent them calling again, which results in boosting first call resolution.

Average Handle Time (AHT), Compliance Rate	Expertise.	Strive to acquire and keep the appropriate knowledge & abilities and makes appropriate use of the available tools/resources to support products/services. Manage the assigned tasks effectively.	Requirement for a consistent and efficient service, reducing call duration and errors.	Scenario: At the beginning of each new interaction, the CE needs to identify the customer. Behavior: The CE should consult the customer's history, summarize the current situation, and position the interaction as a continuation of ongoing support, thereby enhancing the customer experience.
---	------------	--	--	--

2.7 Establishing The Right KPIs

Every line of business must define and establish the management control system based on the KPIs that are adjusted to each operation. The OM needs to evaluate and consider relevant categories and business dimensions to define these KPIs.

2.7.1 KPI CATEGORIES

These are the 5 categories for everyday KPI management:

1. **Service Metrics:** Measure the Service Level (SL) of the operations. It includes metrics such as Service Level, Abandon Rate, Average Speed of Answer (ASA), and others.
2. **Quality:** Measure the quality of the service provided. It includes metrics such as End User Critical score (EUC), Business-Critical score (BC), Compliance Critical score (CC), Escalation Rate Accuracy, and others.
3. **Efficiency:** Measure how efficiently the operations are being run. It includes metrics such as Occupancy Rate, Average Handling Time, Talk time, Utilization Rate, etc.
4. **Sales (if applicable):** Measure the sales performance of the operations. It includes metrics such as Conversion Rate, Upsell Rate, and others.
5. **Customer Experience:** Measure the overall experience of the customers. It includes metrics such as C-Sat, Net Promoter Score (NPS), Customer Effort Score (CES), Customer Churn Rate, and others.

2.7.2 KPI BUSINESS DIMENSIONS

These are the 3 dimensions of everyday KPI management:

1. **Financial Impact KPIs:** KPIs that influence financial outcomes, either because they are directly linked to bonus/malus provisions, or they might influence the constraints of our pricing model.

Example: The failure to meet the sales target directly impacts monthly revenue.
2. **Client Contractual KPIs:** KPIs that, while not directly impacting financials, are contractually agreed. These KPIs typically support decisions, as they are crucial for measuring our delivery performance for clients and can impact business decisions during the contract term.

Example: Although there is no direct penalty for failing to meet the ASA target of below 240 seconds, the client has the right, as per the contract, to transfer the business to another vendor if this KPI is not met for three consecutive months.
3. **Vendor Ranking or Scorecard Weight KPIs:** KPIs that influence the overall vendor ranking or scorecard because are typically considered crucial by the client. These KPIs have the potential to profoundly impact our reputation.

Example: Any KPIs that provide a direct benchmark of TP's delivery against other partners or internal centers.

2.7.3 APPROACH TO ESTABLISH THE RIGHT KPIs

Follow the steps below to establish the right KPIs for the line of business:

1. **Identify the contractual and financial billing model of the operation:** Operations have different billing models, each requiring a distinct focus. It is the OM role to establish the most effective management control system to support

operations and to define the right KPIs. To complete this step, you must review the current contract, any amendments, and the statement of work. *Refer to [BEST WFM](#) for more details about the different billing models.*

2. **List metrics per category:** List the most relevant metrics, according to the three different KPI categories. Consider introducing metrics that best support the business. For instance, for a pay-per-interaction billing model, AHT is introduced as the efficiency metric for financial governance.
3. **Determine how metrics impact each business dimension:** Define if the specific metric is impacting or not each one of the business dimensions.
4. **Define operational KPIs vs PIs:** Only metrics that impact, at least, one business dimension will be considered a KPI, otherwise they shall remain considered as a PI. Please see the next section for the difference between KPI and PI.
5. **Internal and client calibration:** Review the final KPIs vs. PIs with Operational Leadership and department leads to ensure alignment with business goals, then review with the client to confirm both parties measure success using the same criteria.
6. **Compliance:** Defined KPIs must be reported in the TOPS self-assessment and global audits and must be included in the defined operational reporting implemented to manage operations in the program (in line with BEST BI visualization requirements).
7. **Perform annual KPI review:** Annually, the OM must assess whether adjustments to the defined KPIs are necessary.

Note: Defining KPIs in line with the presented criteria is a mandatory responsibility as part of the TOPS OM duties.

Support table to support OM of the process of KPI decision

To help you establish the right KPIs and support the steps outlined above, please refer to the matrix below (available on TOPS SharePoint).

KPI Categories	Metric Name	KPI Business Dimensions			Outcome	Exceptions: Please provide supporting documentation if a metric does not follow the standard categorization.
		1. Financial Impact KPIs	2. Client Contractual KPIs	3. Vendor Ranking or Scorecard Weight KPIs		
1. Service Metrics	Service Level	No	No	No	PI	
	ASA	No	Yes	No	KPI	
	Abandon Rate	Yes	No	Yes	KPI	
	(...)	(...)	(...)	(...)	(...)	
2. Quality	End User Critical score (EUC)	No	Yes	No	KPI	
	Business-Critical score (BC)	No	Yes	No	KPI	
	Compliance Critical score (CC)	No	Yes	No	KPI	
	Escalation Rate Accuracy	No	No	No	PI	
	(...)	(...)	(...)	(...)	(...)	
3. Efficiency	Average handling time	Yes	Yes	Yes	KPI	
	Talk Time	Yes	No	No	KPI	
	After call work	No	No	No	PI	
	(...)	(...)	(...)	(...)	(...)	
4. Sales (if applicable)	Hit Rate	Yes	No	Yes	KPI	
	Save Rate	Yes	No	Yes	KPI	
	# of Sales	No	No	No	PI	
	# of saved clients	No	No	No	PI	
	(...)	(...)	(...)	(...)	(...)	
5. Customer Experience	C-SAT	Yes	Yes	Yes	KPI	
	D-SAT	No	No	No	PI	
	(...)	(...)	(...)	(...)	(...)	

2.7.4 DIFFERENCE BETWEEN KPIS AND PI

By its own definition, all KPIs are important and require equal attention, which is why they are termed KPIs rather than PIs.

Key Performance Indicators (KPIs):

- **Purpose:** Measure the success of operational delivery.
- **Scope:** Directly impact business dimensions (financials, client contractual KPIs, or vendor stack ranking KPIs).
- **Reporting:** Mandatory in operational reports with daily monitoring capability.
- **Target Setting:** Targets must be clearly established and known to Supervisors and above.
- **Callout:** The number of KPIs should be manageable, corresponding to the number of KPIs that Supervisors and above will be accountable for developing and monitoring throughout the month. If you have defined 20 KPIs, consider reducing this number. All KPIs require equal attention, and it is not feasible for your teams to develop and manage 20 KPIs simultaneously.

Performance Indicators (PIs):

- **Purpose:** Monitor various performance aspects but do not measure the success of operational delivery.
- **Scope:** Do not directly impact business dimensions or any metrics that are not included in the KPI family.
- **Reporting:** Complementary metrics are included in operational reporting and not part of the daily governance.

2.7.5 KPI ALIGNMENT THROUGH TOPS EVENTS

Once the KPIs are defined, they must be translated into actions and integrated into the day-to-day operations. It is crucial to align these actions with measures to ensure focus and success. It is also worth noting that each role KPI, and performance review, should align with the KPIs defined for each operational unit.

TOPS is designed to drive alignment across all levels of the organization through a clear priority cascade model, executed within a monthly close cycle. This cycle is structured around five phases: Evaluate, Plan, Execute, Ensure, and Close the Loop. Among the various TOPS events —each with specific goals focused on people development and performance improvement — the three events highlighted below have been selected to illustrate the cascade model in a simplified manner.

TOPS EVENTS	EXPECTED ALIGNMENT OUTPUT	FROM	TO
Monthly Management Meeting (M3)	• Set operation level priority(s). • Define action to address issues and opportunities that will directly impact KPIs.	OM	OAM
Monthly Action Plan (MAP)	• Set Individual Supervisors priority(s). • Define individual Supervisors action plan.	OAM	SUP
CE Coaching & Monthly Performance Review	• Individual behaviors change focus and skill development and KPI improvement. • Define individual CE action plan.	SUP	CE

2.7.6 OPERATIONAL ACTION PLAN RESPONSIBILITIES

The **OM** is responsible for identify issues and opportunities and coordinate the teams in the definition and implementation of action plans to address issues and opportunities for the operation and line of business based on the evaluation of the overall performance, determine monthly cycle action plan, monitoring, and support on providing the necessary tools for the OAMs to execute the action plans per line of business. The OM is also responsible for defining and ensuring everyone's alignment to the action plan in the Monthly Management Meeting (M3).

The **OAM** is responsible for translating the defined action during the M3 into actionable plans. The OAM ensures that Supervisors understand these objectives and provides the necessary tools, guidance, and support to address any challenges or conflicts that arise during the execution of the action plans. The OAM also monitors adherence to the agreed-upon actions with Supervisors and provides feedback to both the Supervisors and the OM.

The **Supervisors** support the definition of the action plans by addressing CE behaviors to create impact in overall KPI improvement.

By definition, actions taken to address issues and opportunities are expected to impact several KPIs

3 TOPS RESPONSIBILITIES

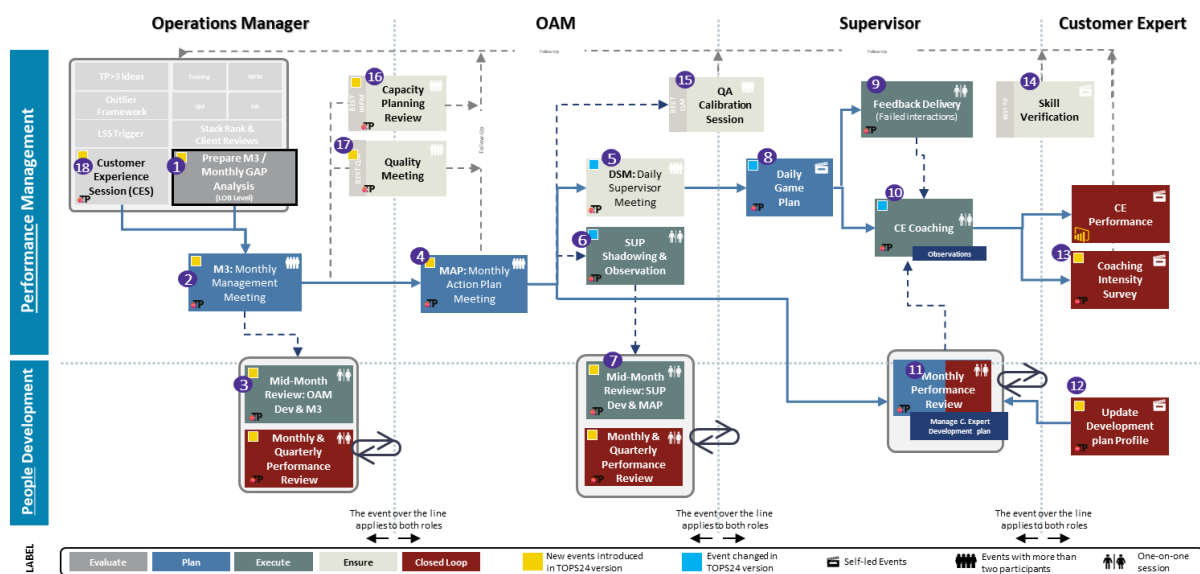

This section provides a comprehensive overview of the Operational Team's responsibilities. It outlines and describes all the mandatory operational processes that must be adhered to by all centers globally.

3.1 TOPS Process Overview

TOPS is a Performance Management and People Development process designed to ensure world-class performance across our operations. It provides a framework to guide operational leaders in effectively evaluating and planning responses to issues and opportunities that need to be addressed. The process offers a structured approach to align and cascade priorities from the role of OM down to CEs with a strong focus on feedback and support for front-line employees. Supervisors are expected to dedicate 50% of their time to TOPS activities with more than 50% of that time focused on direct interaction with CEs.

It is important to note that events and governance above the OM level fall outside the scope of TOPS. Each local CEO or COO is responsible for defining the most effective model for overseeing operations above the OM level and implementing the optimal OM development model for their organization, considering factors such as company size, project structure, seniority levels, and other relevant factors.

The execution guidelines for all mandatory events described in the TOPS process are outlined in the following section as deliverables for the OM, OAM, and Supervisor. To ensure compliance with TOPS, operations must adhere to the TOPS monthly operational cycle and execute all respective events detailed in the TOPS process flow:

Note: Please find the editable document in [TOPS SharePoint](#).

The TOPS process framework and respective events are grouped in five phases:

PROCESS	DESCRIPTION
Evaluate	Evaluate KPIs and gather all necessary information to identify key issues and opportunities, ensuring focused and aligned planning with the teams on actions that need to be implemented.
Plan	Based on the performance analysis, key issues and opportunities are identified, and root causes are analyzed to define the necessary actions.
Execute	Execute your daily tasks with a focus on the main goal: providing support, feedback, and coaching to your team.
Ensure	Ensure at all levels that tasks are being implemented through effective monitoring and reporting.
Close Loop	Describe the processes that OM, OAM, SUP, and CEs will use to effectively guide and develop their teams.

Description of a monthly operational cycle:

- 1. M3 Preparation (monthly gap analysis):** Before the M3 meeting (the event that marks the start of a new TOPS cycle), the OM must carefully evaluate KPIs and gather necessary information to identify key issues and opportunities. preparation is critical for maintaining the quality of the M3 meeting and achieving clear, aligned

actions among attendees. The OM coordinates with managers (OAM, Quality, Training, WFM) to align issues and review previous M3 items, keeping the meeting focused on root causes and action planning.

2. **Monthly Management Meeting (M3):** The OM leads one M3 meeting, together with departmental leads. The focus is on synchronizing efforts and defining actionable steps. As output of the meeting, the OM must produce a structured report documenting the issues and/or opportunities, root causes, and actions, along with the ownership of those actions and agreed timelines. This meeting also serves as preparation for the client's Monthly Business Review and provides the necessary guidance and insights for the OAM to design action plans with Supervisors, setting the stage for the Monthly Action Plan meeting.
3. **Mid-Month Review - OAM Development & M3:** A monthly One-On-One meeting between the OM and each OAM is held to review progress on the agreed M3 actions, discuss performance, address issues, plan the upcoming weeks, provide support, feedback and coaching based on observations made by the OM.
 - **Monthly Performance Review (MPR) between OM and OAM:** Each month, the OM conducts an individual review with OAM to discuss achievements, areas for improvement, and set development goals for the upcoming month. This process includes evaluating KPI performance, establishing goals for the next cycle, and identifying opportunities for growth. It summarizes the previous month's performance and sets the development plan for the next TOPS cycle. The quarterly performance review follows the Performance Management Process of TP and replaces the MPR.
4. **Monthly Action Plan (MAP) Meeting:** Following the M3, a dedicated meeting with all Supervisors is held. The meeting aims to review the monthly performance, set goals for the upcoming month, and develop an action plan for each Supervisor to achieve these goals and address the issues identified during the M3 on a tactical level. As an output of this meeting, the OAM must produce the MAP with actions for each Supervisor. It is important to mention that the MAP is created by the OAM at the beginning of a new TOPS cycle. However, it must be seen as a living document where new actions and changes discussed throughout the month in DSM, monthly One-On-One Meetings, and other events continue to be tracked into this document.
5. **Daily Supervisor Meeting (DSM):** Daily meeting with Supervisors addresses operational issues, updates, and progress. This touchpoint supports Supervisors in planning their daily activities and ensures focus alignment towards the defined plan of the month and to the items require action driven by operational nature of the business. As an output of this meeting, the OAM must document the session by sharing a brief summary of the relevant topics discussed and actions with all the Supervisors. Actions that might have been assigned to specific Supervisor must also be included in the MAP for the respective Supervisor.
6. **Supervisor Shadowing & Observation:** on a monthly basis, OAMs monitor the quality of support provided to CE by observing Coaching Sessions conducted by Supervisors and assessing their ability to fulfill their duties through shadowing. The OAM must perform at least one shadow and one observation per month for each Supervisor.
7. **Mid-Month Review - Supervisor Development & MAP:** A monthly One-On-One Meeting between the OAM and each Supervisor is held to review progress on the agreed MAP actions, discuss performance, address issues, plan the upcoming weeks, provide support, feedback and coaching based on observations made by the OAM during the month.
 - **Monthly Performance Review (MPR) between OAM and Supervisor:** Each month, OAM conducts individual reviews with Supervisors, with the quarterly performance review following the Performance Management Process of TP and replacing the MPR for that month.
8. **Daily Game Plan:** Supervisors are responsible for executing their daily Game Plan, which includes activities related to coaching, monitoring, and other tasks.
9. **Feedback Delivery:** Throughout the month, as needed, Supervisors must provide feedback on interactions conducted by their CEs that did not meet quality standards or resulted in critical failures.

10. **CE Coaching Session:** Throughout the month, Supervisors conduct weekly coaching sessions for the CE outliers and New Hires and at least monthly for the remaining, focusing on behaviors using Observations to drive their performance towards the agreed monthly commitments.
11. **CE Monthly Performance Review (MPR):** Each month, the Supervisor conducts an individual review with CE to discuss achievements, areas for improvement, and set development goals for the upcoming month. This process includes evaluating KPI performance, establishing goals for the next cycle, and identifying opportunities for growth. It summarizes the previous month's performance and sets the development plan for the next TOPS cycle.
 - **CE Development Plan (CEDP):** The CEDP must consolidate diverse insights about the individual to drive the growth of each CE, reflecting TP's commitment to individual success and development. In preparation of the MPR, the Supervisor is accountable for updating the plan at least once. This serves as an employee profile, facilitating a deeper understanding within TP and supporting smooth transitions to other projects by providing receiving Supervisors with detailed employee information. By consistently managing the CEDP, Supervisors can leverage it as a powerful tool to develop their teams.
12. **Update Development plan Profile:** Each month, the CE (CE) is required to update their profile on the Development Plan portal. This profile should serve as a current and accurate reflection of their development plan. It is recommended that the update be completed prior to the Monthly Performance Review (MPR) with the Supervisor, as it supports a more meaningful and productive discussion. By reflecting on recent weeks, reviewing key events, and reassessing personal development goals, the CE is better prepared to engage in focused dialogue and receive targeted feedback.
13. **Coaching Intensity Survey:** random sampling of CEs receiving automated surveys is conducted to verify the effectiveness of coaching and feedback provided to CE, supporting continuous improvement.
14. **Monthly Skill Verification (MSV):** Every month, the Training department launches a quiz for all CEs, Supervisors, and OAMs to identify knowledge gaps and support the development of training plans.
15. **Monthly QA Calibration:** Each month, the Supervisors participate in a calibration session with the QA Team to ensure consistency in evaluating interactions by establishing a shared understanding of scoring guidelines. This strengthens confidence in the analysis and ensures that feedback, coaching, training, and development are aligned toward the same objective.
16. **Capacity Planning Review:** On a weekly basis, the OAM and WFM team meet to review progress on the agreed M3 actions and assess capacity plans.
17. **Quality Review:** Each week, the OM and OAM meet with the Quality Team to review identified insights from the quality team, the progress of actions agreed upon during M3, and discuss relevant issues arising from the Quality analysis that must be addressed.
18. **Customer Experience Session (CES):** To close the loop and identify opportunities to further improve the quality of the service we provide; the OM carries out the CES protocol. This involves monitoring calls, shadowing CEs, attending DSM, and running focus group sessions with CEs. This process validates the established operational model and focuses on continuous improvement.

3.2 Time Spent and Event Sequence per Role

3.2.1 TIME SPENT SUMMARY PER ROLE

The time-spend research provides an indicative reference of the time required for TOPS application considering what is defined as minimum requirement for TOPS compliance and intends also to provide a structured guideline on how events are distributed and executed each month. Also, highlighted the changes versus the previous version requirements. This includes all mandatory TOPS events and accounts for both the execution time and any necessary preparation time (e.g., for coaching, feedback sessions, reviews, or planning), to ensure each activity is conducted effectively.

Note that the time spent on research is based on the minimum frequency requirements defined for each event. However, operations can choose to increase the frequency to better address operational needs. Coaching efforts should be prioritized when there are no other pressing tasks, ensuring that development activities receive the attention necessary for team growth.

3.2.2 OM RESEARCH: 20/50 PERCENT PRINCIPLE

- ~20% of the OM time is focused on the TOPS application.
- ~60% of the time allocated to TOPS is spent interacting in 1:1 session with OAM (>50% total TOPS allocation).

Owner/ Organizer	TOPS Event	Minimum Frequency	Event Type	Nr. Of L-1's	Target Monthly occurrences	Indicative Sequence Timeline				Unit Time / Event		Monthly Time Min (Time X occurrences X L-1s)	Summary Time spent research			
						W1	W2	W3	W4	Execution	Preparation		Event Type	Monthly Time Min	V25 % *	V24 % *
OM	Monthly Management Meeting (M3)	Monthly	Meeting	N/A	1	1				85	240	325	Meeting	805	8.9%	9.4%
OM	Mid-Month Review: OAM Dev & M3	Monthly	L-1	5	1		1			45	25	350	L-1	0	0.0%	0.0%
WFM	Capacity Planning Review	Weekly	Meeting	N/A	4	1	2	3	4	60	20	320	L-1	1295	14.4%	20.0%
QM/TM	Weekly Quality Meeting	Bi-weekly	Meeting	N/A	2		1		2	60	20	160	Admin	0	0.0%	
OM	Customer Experience Session (CES)	Monthly	L-1	N/A	1			1		250	0	250				
OM	Monthly / Qtr Performance Review	Monthly	L-1	5	1				1	45	30	375				
													Total	2100	23.3%	29.4%
* % = total TOPS Time month / (20 x 7,5h * 60m)																

3.2.3 OAM RESEARCH: 30/50 PERCENT PRINCIPLE

- ~30% of the OAM time is focused on the TOPS application.
- ~50 of the time allocated to TOPS is spent interacting in 1:1 session with Supervisors (>50% total TOPS allocation).

Owner/ Organizer	TOPS Event	Minimum Frequency	Event Type	Nr. Of L-1's	Target Monthly occurrences	Indicative Sequence Timeline				Unit Time / Event		Monthly Time Min (Time X occurrences X L-1s)	Summary Time spent research			
						W1	W2	W3	W4	Execution	Preparation		Event Type	Monthly Time Min	V25 % *	V24 % *
OM	Monthly Management Meeting (M3)	Monthly	Meeting	N/A	1	1				85	30	115	Meeting	1480	16.4%	16.7%
OM	Mid-Month Review: OAM Dev & M3	Monthly	L-1	N/A	1		1			45	25	70	L-1	145	1.6%	3.4%
WFM	Capacity Planning Review	Weekly	Meeting	N/A	4	1	2	3	4	60	20	320	L-1	1365	15.2%	23.3%
QM/TM	Weekly Quality Meeting	Bi-weekly	Meeting	N/A	2		1		2	60	20	160	Admin	20	0.2%	0.2%
OM	Monthly / Qtr Performance Review	Monthly	L-1	N/A	1				1	45	30	75				
OM	Monthly Action Plan Meeting (MAP)	Monthly	Meeting	N/A	1		1			90	105	195				
OAM	SUP Shadowing & Observations	Bi-weekly	L-1	7	2			1	2	30	0	420				
OAM	Mid-Month Review: SUP Dev & MAP	Monthly	L-1	7	1				1	30	30	420				
OAM	Monthly / Qtr Performance Review	Monthly	L-1	7	1	1				45	30	525				
OAM	Daily Supervisor Meeting	Daily	Meeting	N/A	20	5	10	15	20	20	10	600				
QM	Monthly Quality Calibration	Monthly	Meeting	N/A	1	1				60	30	90				
TM	Monthly Skill Verification (MSV)	Monthly	Admin	N/A	1	1				20	0	20				
													Total	3010	33.4%	43.7%
* % = total TOPS Time month / (20 x 7,5h * 60m)																

3.2.4 SUPERVISOR RESEARCH: 50/60 PERCENT PRINCIPLE

- ~50% of the Supervisor time is focused on the TOPS application.
- ~60% of the time allocated to TOPS is spent interacting in 1:1 session with CEs

Owner/ Organizer	TOPS Event	Minimum Frequency	Event Type	Nr. Of L-1's	Target Monthly occurrences	Indicative Sequence Timeline				Unit Time / Event		Monthly Time Min (Time X occurrences X L-1s)	Summary Time spent research			
						W1	W2	W3	W4	Execution	Preparation		Event Type	Monthly Time Min	V25 % *	V24 % *
OM	Monthly Action Plan Meeting (MAP)	Monthly	Meeting	N/A	1		1			90	60	150	Meeting	840	9.3%	9.7%
OAM	Mid-Month Review: SUP Dev & MAP	Monthly	L+1	N/A	1			1		30	30	60	L+1	145	1.6%	1.6%
OAM	Monthly / Qtr Performance Review	Monthly	L+1	N/A	1	1				45	40	85	L-1	2720	30.2%	66.1%
OAM	Daily Supervisor Meeting	Daily	Meeting	N/A	20	5	10	15	20	20	10	600	Admin	745	8.3%	7.7%

Supervisor	Feedback Delivery (Failed / Successful interactions)	As needed	L-1	17	1	As needed (assumed 1 for calculation)				15	10	425				
Supervisor	CE Coaching	New Hire/Outlier	L-1	17	1					30	30	1020				
Supervisor	CE Monthly Performance Review	Monthly	L-1	17	1				1	45	30	1275				
Supervisor	Manage CE Development Plan	Monthly	Admin	17	1				1	15	10	425				
QM	Monthly Quality Calibration	Monthly	Meeting	N/A	1	1				60	30	90				
TM	Monthly Skill Verification (MSV)	Monthly	Admin	N/A	1	1				20	0	20				
													Total	4450	49.4%	85.1%
* % = total TOPS Time month / (20 x 7.5h * 60m)																

Note: Please find the editable document in [TOPS SharePoint](#).

Event Table Label:

- **Owner/Organizer:** Roles of the individuals leading or organizing the event.
- **Minimum Frequency:** defines the minimum requirements for TOPS compliance.
- **Event Type:** categorization of the event:
 - **L -1:** Time spent with direct reportees (below).
 - **L + 1:** Time spent with direct managers (above).
 - **Meetings:** Time spent in cross-functional meetings (not in One-on-One meetings).
 - **Administrative:** Time spent on administrative TOPS activities.
- **Number of L-1s (direct reports):** determines how many times a 1:1-type event must be conducted per month.
- **Target Monthly Occurrences:** defines the number of events targets per month for TOPS compliance.
- **Indicative Sequence Timeline:** provides a proposed timing for when the event should occur during the month.
- **Unit time/Event:** set indicative time for event duration.
- **Estimated Monthly Time Requirement:** Total time calculated based on the number of L-1s (direct reports), the target monthly frequency of each event, and the unit time allocated per event.
- **Summary Time spent research:** for each role, a time summary is included that outlines:
 - **Monthly Total time (in minutes)** spent on multiple events
 - **The percentage of monthly allocation** to each event category

3.2.5 METHODOLOGY CONSIDERATIONS

To ensure consistency and comparability, time allocation percentages are calculated using the following baseline:

- **20 working days per month**
- **7.5 hours of working time per day, accounting for a 30-minute daily break** (which may vary depending on country-specific labor laws)

This assumption matches the **Indicative Sequence Timeline**, which spreads the events across a typical four-week month and recommends a logical order and spacing for each recurring activity.

The following assumptions and considerations were factored into the time-spend research for consistency and clarity:

- **TOPS Events:** All events described in the TOPS process above were considered in the research.
- **Working Hours:** It is assumed that each individual works 7.5 hours per day, for 20 working days per month.
- **Time Calibration:** The unit time per event used in the research is calibrated based on feedback from OAM and OM in countries where TOPS24 pilots were executed, relying on pilot observations. As the program progresses, time allocation will be optimized according to learning curves.
- **CE Shrinkage Consideration:** It is assumed that CE work 5 days a week.
- **Month Duration:** assumes that each month consists of 4 weeks, regardless of variations in calendar days.
- **Ratios:** The following ratios were used for calculations:
 - **Supervisor to CE:** 1:17
 - **OAM to Supervisor:** 1:7
 - **OM to OAM:** 1:5

- **Monthly Performance & Quarterly Review:** During the month of the Quarterly Performance Review (QPR), Monthly Performance Review (MPR) is not conducted.

3.2.6 50% PRINCIPLE: PRIORITIZING PEOPLE DEVELOPMENT

Across all roles, at least 50% of the time spent within the TOPS application is dedicated to 1:1 interaction with direct reports (L-1s). These interactions are designed to support the personal and professional development of each team member and represent a foundational element of effective leadership and performance improvement in the TOPS methodology.

The remaining time for operational roles is allocated to other local organizational and client-related activities, such as supporting new hires, offering floor support, conducting mandatory training, facilitating development sessions, managing internal HR administrative tasks, supporting PSP initiatives, Quality Monitoring (when applicable), holding client meetings, performing specific client-related activities, and addressing additional support items.

However, Supervisors and Operational Managers should increase the intensity of their coaching and people development efforts whenever additional time is available, depending on the needs of each individual. Coaching and people development should remain the primary focus. Operational Managers are encouraged to prioritize people development by increasing these efforts once all TOPS responsibilities and other tasks are completed.

3.2.7 INCREASED SCOPE FOR OM AND OAM ROLES

The OM and OAM roles have increased exposure to internal process management, client interactions, and a portfolio of other duties that are not directly tied to TOPS when compared to the Supervisor role. However, both roles are fundamental to the success of the entire operation. They are responsible for evaluating issues and opportunities, defining actions, ensuring progress through follow-ups, and mitigating risks by monitoring OAM, Quality, WFM, and the development of OAM and Supervisors.

Therefore, since version 24, TOPS invests in an enhanced framework for operational evaluation and action planning, ensuring alignment across different roles and providing a solid foundation for the entire operation's success.

3.3 Operations Manager Deliverables

3.3.1 M3 PREPARATION (MONTHLY GAP ANALYSIS)

Event Name	Event Type	Recurrence	Est. Duration (mins)	Required Output Evidence	Approved Support system	Accountable/ led by	Participants
M3 Preparation	Action	Monthly	240	M3 Tracker (TOPS template);	TOPS App; Excel (if not using TOPS App).	OM	OM to engage with multiple stakeholders as needed.

Definition: This process requires the OM to conduct a gap analysis by evaluating the previous month's performance against set KPIs and trends to identify issues or opportunities and ensure comprehensive identification of root causes in advance. This preparation guarantees that the M3 meeting meets the required quality standards and effectively supports the development of action plans to be addressed during the meeting.

Purpose: This preparation process ensures that the M3 meeting drives actionable outcomes by focusing on addressing root causes and agreeing on corrective actions, rather than spending time identifying issues and opportunities. The necessary work for agreeing on action plans should be completed before the M3 session, enabling the meeting to focus on securing actions, not just discussions.

Gap Analysis Definition:

Gap analysis is a process used to assess the difference between three key elements:

- **Current Situation (Performance):** The existing state or performance level.
- **Ideal Situation (Potential):** The desired or optimal state or performance level.
- **The Gap (Bridging the Difference):** What needs to be done to move from the current situation to the ideal situation.

The “gap” refers to the discrepancy between your current state and the desired state. Other terms often used for gap analysis is “performance assessment.” Gap analysis is a critical tool to better understand how to enhance processes and delivery. It is used not only to identify inefficiencies (issues) but also to augment performance (opportunities), even when no immediate problems are apparent.

Summary of Tools That Can Support the Gap Analysis Process:

- **Data and Benchmarking Tools:** KPI Dashboards (primary), Benchmarking
- **Diagnostic Tools:** Fishbone Diagram, 5 Whys, Root Cause Analysis
- **Process Improvement Tools:** Value Stream Mapping, Control Charts
- **Prioritization Tools:** Pareto Analysis, SWOT

Guidelines for the Event’s Successful Execution:

- **Continuous process:** Use the reviews with the OAM, Quality, and WFM teams to assess progress on the defined actions—what has been resolved—and to keep the M3 tracker continuously updated.
- **Update M3 Tracker:** Review and update the M3 Tracker using notes from previous meetings to ensure clarity on the status of all previously agreed-upon action plans across relevant teams.
- **Review KPI Performance:** The OM must review the Quality, Productivity, and HR KPI before the M3 to confirm understanding and pre-list the gaps. This helps establish a clear understanding of what needs to be done (whether action plans are required or PSP should be initiated) and allows the M3 meeting to focus on analyzing root causes and planning corrective actions for metrics not on target.
- **Review Complementary Sources:** Examine various sources for improvement and transformation, including insights from CES protocol reviews, E-SAT, K-SAT, TP Loves Ideas, potential LSS initiatives (refer to PSP LSS triggers section), and the Outlier Management Framework.
- **Identify Gaps and Communicate Them:** Identify gaps and inform the teams prior to the M3 by updating the tracker.
- **Request Team Preparation:** Ask the team to prepare by updating the M3 Tracker with root causes and present the KPIs under their direct management responsibilities.
 - Avoid additional administrative work, including the creation of extra presentations or reports.
 - The recommended approach is to use the M3 Tracker and the existing PBI pack to support this process.
 - If additional support is desired, use the defined template for the Monthly Business Review (MBR), which is familiar to all the team. This will also allow you to review the deck prior to the client meeting.
- **OM Direct Manager Engagement:** Notify OD (or OM’s direct manager) about the M3 tracker updates prior to the M3 session to enhance the overall quality of OD’s assessment during the meeting.
- **Invite Additional Members:** Depending on the pre-identified gaps, the OM may decide to invite additional stakeholders to support the discussion of action plans during the M3 for a specific topic.
- **Preparation for Client Monthly Business Review:** Ensure that this preparation aligns with the timing needed for the client’s monthly performance review discussion to optimize time.

Event Requirements:

- **Responsibility Matrix:**

Event Tasks	Delegable	Roles Authorized for Delegation
Conduct a gap analysis by evaluating the previous month’s KPI and other sources to identify gaps.	☐	Non-delegable, event accountable must create task.
Identify issues or opportunities.	☐	Non-delegable, event accountable must create task.

Update and review M3 tracker and notify teams to work on root cause identification .	☐	Non-delegable, event accountable must create task.
Invite OD and other required participants as per gap assessment outcome.	☐	Non-delegable, event accountable must create task.
Schedule M3 session.	☐	Non-delegable, event accountable must create task.

- **Output Evidence:**

- **Background:** All LOB-level actions must be updated in the M3 tracker, which serves as the key tool for registering gaps (issues and opportunities) and ensuring action plan traceability. No additional elements are required for compliance purposes. OM's may choose to use complementary support materials to facilitate the M3 meeting, but this is optional and left to the discretion of each operation.
- **Defined TOPS Template:** M3 Tracker (Please find the editable document in [TOPS SharePoint](#)).

3.3.2 MONTHLY MANAGEMENT MEETING (M3)

Event Name	Event Type	Recurrence	Est. duration (mins)	Required Output Evidence	Approved Support system	Accountable / led by	Participants
Monthly Management Meeting (M3)	Meeting	Monthly	85	M3 Tracker	TOPS App; Excel (if not using TOPS App).	OM	Operations Director; OM; OAM; Support Dept Leads.

Definition: This session is owned and led by the OM, who is responsible for organizing and driving the meeting. Attendance from the OM's direct manager (Operations Director and/or VP if no Operations Director) is required to provide guidance and support. The session focuses on reviewing overall project performance, agree on gap identification, root cause and respective action plans in the right priorities. Each department leader must cover their respective KPIs, root causes and proposed actions plans for each gap based on the previous month's results.

Purpose: Review overall project performance and align efforts to achieve operational excellence and drive continuous improvement by leveraging insights from past performance to inform and enhance each new TOPS cycle. The goal is to ensure a comprehensive understanding of each team member's role in contributing to operational success, foster synergies among initiatives, and collaboratively agree on action plans.

TOPS Process-Defined Agenda

1. **Quality (Core Item)**

- a. **Targets and Deltas:** review performance of quality metrics.
- b. **Top Contact Driver Analysis:** Review of performance analysis by the top contact driver, understanding volume changes, VSF, outliers, defining target per contact drivers, and deciding on skilling change.
- c. **Root Cause Analysis Review (CX, Repeat Fail, Driver Analysis, others):** A comprehensive review of the root cause analysis and correlation conducted by the Quality Organization.
- d. **New Hire Performance and Learning Curve:** Assess impact of new hires on operations and their progress along the learning curve (*covers [BEST TD New Hire Success Meeting Requirement](#)*)
- e. **Process Improvement Tracker:** Review the list of identified 'nuggets' from Quality as part of the BEST QM daily deliverable, focusing on process improvements identified during the monitoring process.
- f. **Performance Stack Rank** (if available).

2. **Productivity (Core Item):** review targets and deltas for the productivity KPIs and other relevant indicators.

- a. Ready time.
- b. Occupation levels.
- c. AHT.
- d. Cases / hour.
- e. Others.

3. **HR (Core Item): review targets and deltas for the HR metrics.**
 - a. Training Graduation Rates
 - b. Monthly Verification Skill (MSV) Results and outputs and learning plans.
 - c. Attrition (vs. organization like for like e.g. French employees in the operation vs. French employees supporting all operations in the organization).
 - d. Absenteeism (vs. organization like for like e.g. French vs. French).
4. **Revenue Growth & Client Relationship.**
 - a. Review Farming Opportunities.
 - b. **Review Process Improvement and Transformation Opportunities (LSS, CES, TPLI, client-driven, “nuggets” identified by quality, any other):** Review progress of ongoing initiatives and determine inclusion of new initiatives based by assessing inputs from the multiple sources (CES, TP<3 Ideas, others), and determine support needed.
5. **General Updates and Announcements:** Share specific updates that are essential for the team to know, including client visits, changes in organizational charts, or any other relevant information.
6. **Readout of the agreed actions:**
 - a. **At the end of each chapter** review and update the previous month’s priorities, and record newly agreed-upon priorities based on discussed issues and opportunities.
 - b. **At the end of the meeting,** review the agreed-upon actions to ensure all participants clearly understand what is expected.

Guidelines for the Event’s Successful Execution:

- **Support Documentation for Alignment:** Reduce the workload for teams by focusing on converging alignment using the M3 Tracker and existing PBI views. If, based on current reporting structures and operational needs, the decision is made to create specific support materials for the session, please replicate—wherever possible—the support documentation used for the monthly business review with the client, or reuse the same content to optimize time and ensure alignment across teams.
- **Align the session timeline with the client or internal monthly review:** Use this session as a preparatory review ahead of the Monthly Business Review (MBR) with the client or any monthly internal review.
- **Ensure Action Plans are Agreed Upon for KPI Remediation:** Ensure action plans are agreed upon for issues or opportunities that will support the remediation of KPIs not on target. If this is not achieved, the root causes were not properly identified, and there will be no actions to address improving KPIs that are not on target. This must be considered the success metric for the meeting.
- **Ensure the LLS principle is respected:** During the session, decide whether to initiate an LSS project if KPIs are not met and the VSF is below 0.7 for three out of four periods considered. Alternatively, if the VSF is above 0.7 for three out of four periods—including at least one of the last three periods—this may indicate an opportunity to improve performance across CEs and typically reflect process instability, regardless of whether KPIs are being met (please refer to LSS Section the 3.11).
- **Maximize attendance and promote efficiency:** Schedule sessions consistently on the same day and week each month. Send calendar invitations for the upcoming semester in advance to ensure maximum participation. Depending on the operational setup, the OM may choose to conduct a single M3 meeting for the entire account or hold separate sessions by Line of Business (LOB) or market, as appropriate.

Event Requirements:

- **Responsibility Matrix:**

Event Tasks	Delegable	Roles Authorized for Delegation
Secure OM’s Direct Manager attendance.	☐	Non-delegable, event accountable must create task.
Send M3 meeting invites the following defined mandatory agenda items as per TOPS requirements.	☐	Non-delegable, event accountable must create task.
Drive Meeting agenda items.	☒	May be delegated.

Update M3 Tracker following up the meeting ensuring alignment of agreed action plans to remediate off-target KPIs and other actions.	☐	Non-delegable, event accountable must create task.
Secure a review of multiple sources, including LSS triggers and evidence that PSP was opened when required, as per LSS triggers.	☐	Non-delegable, event accountable must create task.

- **Output Evidence:**

- **Background:** Actions agreed upon must be reflected and categorized in the M3 Tracker using the defined standard M3 template. The M3 Tracker is a living document and must be actively updated throughout the month to ensure accurate tracking of progress and changes.
- **Defined TOPS template:** M3 Tracker (available in [TOPS Support Documents](#)).

LOB / Market	Issue/Opportunity	Root Cause	Action	Owner	Original Deadline	Current/Real Deadline	Last Review Date	Progress Update	Status	Improvement Type	Primary Impact	Source
UK	High # calls transferred to 2nd line	Lack of Knowledge on new product features in 1st line	Refresh Training for 1st Line and for the Inbound Sales Team	Training Manager	15-Jul	17-Jul	18-okt	10/10: trained 50 agents 18/10: trained 75 agents	In Progress	Knowledge	Client Loyalty	Internal Reviews
Danish	High # calls transferred to 2nd line	Lack of access to be able to visualize customer packages	Provide proposal to Client about additional permissions for 1st line (perform BC and obtain security approval prior)	OAM	17-Jul	16-Jul	18-okt	18/10: BC presented, client approved, and already deployed.	Closed Successfully	Technology	Revenue	LSS Trigger
									Not Started	Processual	Client Loyalty	CES
									Canceled			TAP Assessment
									Closed			Internal Reviews
									Unsuccessfully On Hold			

3.3.3 MID-MONTH REVIEW: OAM DEVELOPMENT & M3

Event Name	Event Type	Recurrence	Est. Duration (mins)	Required Output Evidence	Approved Support system	Accountable/ led by	Participants
Mid-month Review: OAM Dev & M3	Meeting (1:1)	Monthly	45	OAM Dev M3 Review forms	TOPS App; BMS; RISE	OM	OAM

Definition: Monthly one-on-one session led by the OM with each of the OAM to coach and works as mid-month checkpoints to follow up and review the actions of the M3.

Purpose: This monthly event is intended to coach and develop the OAM but also works as a check point for monitoring the progress on the commitments and actions agreed on the M3. It involves reviewing performance, addressing issues, and planning for the week ahead using insights from various assessments to provide structured feedback and recognition.

TOPS Process-Defined Agenda:

- **OAM Development:**
 - **Shadowing & Performance Review:** Assess task management, problem-solving, commitment, and attendance while defining next steps for growth.
 - **Deliverables Pulse Check:** Review and discuss progress of daily duties, such as Coaching Efficiency, DSM, Supervisor Observation, Supervisor Development, discuss upcoming client meeting, and others.
- **M3 Review:**
 - **HR:** Review targets and variances for key HR metrics, including attrition, absenteeism, and others.
 - **Productivity:** Assess targets and variances for production KPIs and relevant metrics, incorporating VSF and outlier improvement into the discussion.
 - **M3 Commitments:** Evaluate progress on M3 commitments related to OAM and determine if additional actions or adjustments are needed to achieve staffing, performance, and overall quality goals.

Event Requirements:

- **Responsibility Matrix:**

Event Tasks	Delegable	Roles Authorized for Delegation
Schedule session.	☐	Non-delegable, event accountable must create task.
Updated M3 with progress of actions.	☒	Can be delegated. Either OM or OAM can perform updated.
Registration of the session using defined TOPS template (OAM Dev M3 review).	☐	Can be delegated. Must be performed by the OAM.

- **Output Evidence:**

- **Background:** To support manager development, track action plan progress, aid monthly/quarterly reviews, and ensure key topics are covered.
- **Defined TOPS template:** OAM Development & M3 Review (available in [TOPS Support Documents](#)).

1.1. OAM Development: SHADOWING	Comment	Field Type
Ability to cope with the tasks and daily routine	optional, mandatory	exceed expectations; on target; below expectations
Problem solving and continuous improvement	optional, mandatory	exceed expectations; on target; below expectations
Commitment and responsibility	optional, mandatory	exceed expectations; on target; below expectations
Attitude towards work	optional, mandatory	exceed expectations; on target; below expectations
Project knowledge	optional, mandatory	exceed expectations; on target; below expectations
Absenteeism and delays [drop box with options below]	optional, mandatory	exceed expectations; on target; below expectations
Next step / OAM commitment	optional, mandatory	[text]
Next step / OM commitment	optional, mandatory	[text]
1.2. OAM Development: Deliverables PULSE CHECK	Comment	Field Type
MAP execution and follow-up	text, optional	exceed expectations; on target; below expectations
DSM execution	text, optional	exceed expectations; on target; below expectations
Shadowing and Observation of Supervisors	text, optional	exceed expectations; on target; below expectations
Weekly One to One Supervisor	text, optional	exceed expectations; on target; below expectations
Alignment with other departments	text, optional	exceed expectations; on target; below expectations
CE's Coaching Intensity Levels	text, optional	exceed expectations; on target; below expectations
Preparation of client meetings	text, optional	exceed expectations; on target; below expectations
Next step / Sup commitment	text, optional	[text]
Next step / OAM commitment	text, optional	[text]
2.1. M3 Review: People Temp Pulse Check	Comment	Field Type
Risk of CE attrition higher than average	text, mandatory	Yes/ NO
Risk of Sup attrition in the next 30 days	text, mandatory	Yes/ NO
Are there any general dissatisfaction reasons across your teams?	text, mandatory	Yes/ NO
Next step / Sup commitment	text, optional	[text]
Next step / OAM commitment	text, optional	[text]
2.2. M3 Review: Progress	Comment	Field Type
Are outliers showing improvement in their performance?	text, mandatory	Yes/No/Not applicable
Are new hires meeting the glide path targets?	text, mandatory	Yes/No/Not applicable
Is overall team performance trending positively?	text, mandatory	Yes/No
Progress on agreed M3 actions	text, mandatory	Yes/No
Is any support needed to remove blockers or accelerate action closure?	text, mandatory	Yes/No
COMMENT		
Comment	text, optional	[text]

3.3.4 MONTHLY & QUARTERLY PERFORMANCE REVIEW

Event Name	Event Type	Recurrence	Est. Duration (mins)	Required Output Evidence	Approved Support system	Accountable/ led by	Participants
Monthly & Quarterly Performance Review	Meeting (1:1)	Monthly (replaced by Quarterly review in that month)	45	Monthly Performance Review; Quarterly Performance Review	TOPS App; BMS or RISE (monthly); Defined by HR System, typically MyTP (Quarterly).	OM	OAM

Definition: The Monthly Performance Review is a formal evaluation process between the OM and OAM, designed to assess the OAM performance against operational and to continuously develop OAM. The monthly is replaced by the HR Quarterly review when scheduled.

Purpose: The review aims to evaluate performance, identify areas for improvement, recognize achievements, set future goals, and facilitate leadership development. It ensures that OAM effectively supports and develops their Supervisors to consistently meet team targets. Additionally, the review includes an assessment of the execution of TOPS and other deliverables, ongoing progress, and the MAP progress, serving as a “close the loop” event. The monthly review should also serve as a checkpoint to assess their progress toward agreed quarterly commitments.

The TP global performance review process evaluates how each individual is performing against their commitments. Additional guidance from global HR can be found [here](#).

Guidelines for the Event’s Successful Execution - Before the meeting:

- **Schedule the Monthly and Quarterly Performance Reviews in Advance:** The OM may consider booking these meetings for the entire year to ensure organized calendars, establish a strong image of organization for the teams, and promote a prepared environment for all participants.
- **Analyze KPI Data:** The OM should examine the OAM’ team performance data and trends to provide structured feedback on outcomes.
- **Assess TOPS Adoption and Execution:** The OM evaluates PHAROS data (please refer to 4.5.3) to provide structured insights on the adoption and execution of TOPS events.
- **Evaluate Shadowing & Observation Forms:** The OM should assess recent shadowing and observation forms, as well as feedback provided over the past month, to identify improvement opportunities and set clear goals.
- **Monitor MAP Progress:** The OM should review the completion and execution of actions aligned with the plans established during the MAP meeting, as well as the quality of their implementation.

TOPS Process-Defined Agenda:

- **Discuss Performance:** The OM and OAM review the CE’s performance by Supervisor, focusing on KPIs identified in prior evaluations.
- **Provide Feedback:** The OM gives constructive feedback to the OAM, recognizing strengths and highlighting areas needing improvement.
- **Set Goals and Commit:** OM and OAM agree on specific goals and commitments for the upcoming period.
- **Review Supervisor Development Actions:** OM discusses identified development actions for OAM, focusing on growth and areas for enhancement.
- **Summarize Review Outcomes:** OM provides a brief summary of key takeaways from the review, ensuring alignment and synchronization between the OAM and Supervisors on next steps and commitments.

Event Requirements:

- **Responsibility Matrix:**

Event Tasks	Delegable	Roles Authorized for Delegation
-------------	-----------	---------------------------------

Send meeting invites.	☐	Non-delegable, event accountable must create task.
Submit Review form (monthly and/or quarterly) in the defined support system.	☐	Non-delegable, event accountable must create task.

- **Output Evidence:**
 - **Background:** Provides evidence of discussions, formalizes agreed development plans and commitments, and maintains a consistent record of developmental efforts.
 - **Defined TOPS template:** MPR OAM for monthly (available in [TOPS Support Documents](#)). Quarterly as defined by local and global HR.

3.3.5 CUSTOMER EXPERIENCE SESSION (CES)

Event Name	Event Type	Recurrence	Est. Duration (mins)	Required Output Evidence	Approved Support system	Accountable /led by	Participants
Customer Experience Session (CES)	Action	At least once a month	250	CES Findings Report (TOPS template).	TOPS App; Excel.	OM	CEs; Supervisor; OAM.

Definition: The process mandates that OM actively engages with operations on the floor (brick-and-mortar or remote floor) by following a specific protocol. This practice emphasizes the importance of management presence on the floor to foster a hands-on approach and ensure alignment between management and operational realities.

Purpose: Validate that the operational model established is functioning as expected and continuously identify improvement opportunities by actively engaging with frontline operations. This engagement helps align the perceptions of management and operational staff, leading to better-informed decisions based on real-time insights from the core revenue-generating activity—customer interactions. Also, aims to identify internal management practices that require intervention. The CES intends to be a proactive event for addressing issues before they arise.

By leveraging the expertise of operations management, this protocol helps identify improvement opportunities and fosters innovation that must be included in the M3 Tracker.

Event Recurrence: At least once per month for each operation. However, in situations where the OM manages multiple accounts, the requirement changes to once a month per OM. In this case, the OM must rotate the operations monthly to apply the CES protocol.

Guidelines for the Event’s Successful Execution:

- Alternate the event across different LOBs and/or services within your operation to ensure comprehensive coverage. You may also consider performing this more than once per month.
- Notify the Quality Team in advance to ensure they are fully prepared to support you.
- Apply the CES focusing on the LOBs that have the most gaps and improvement requirements.
- For operations not yet using the TOPS App and relying on Excel to document and support the event, it is recommended that the OM continue using a single CES file per client. Each new CES event should be added to the respective tab beneath the previous one, while keeping all action plans for every CES event within the same file. This approach ensures the OM only needs to manage one CES file per client.

Event Requirements:

To complete the CES event, the full protocol must be followed, including these **six** items:

1. **Monitor 5 interactions:** Listen and observe 5 interactions or review 5 cases that are selected randomly by the manager conducting the CES. The preference is to monitor interactions that have already been evaluated by the

Quality department. The most effective way is to sit together with someone from Quality and go through interactions of increasing length by steps of 2 minutes, evaluating the quality of the interaction and whether it matches the evaluation that had been made by the Quality Team.

1. **Cross-check information:** Review the negative evaluations to determine if they have been read and what actions were taken in response. Additionally, track the level of attention that management pays to QA reports and validate that Supervisors are monitoring customer interactions.
2. **Supervisor Shadowing:** Evaluate whether the Supervisor's routine aligns with TOPS, supports overall CE development objectives, and enables them to fulfill their duties. Also, assess if they have the necessary tools and processes to perform their job effectively.
3. **Attend one DSM:** Evaluate the efficiency of the DSM (actions follow up, preparation, respect of the agenda), the positive culture and environment between the OAM and Supervisors, and whether the DSM is promoting daily tactical alignment of actions with WFM, monitoring KPIs, and effectively using the necessary tools to support the objectives.
4. **Host CE focus group:** schedule focus group meetings with CEs to better understand their experience. The goals of the CE focus group are to identify and address the key challenges CE's encounter during their shifts, explore potential improvements to enhance work efficiency, and evaluate the level of support provided by the organization. Additionally, the focus group aims to assess the effectiveness of both initial and ongoing training, understand what motivates CEs to deliver their best performance, and gather suggestions for making their roles easier and more enjoyable.
5. **Action Plan:** After the CES, the manager generates a report, identifies improvement opportunities, and initiates actions to address them. Action plans can be registered using the M3 tracker, as the structure defined in the CES template mirrors the M3 format, simplifying the process for the OM. To comply with the final step, the OM can easily register and incorporate these action plans into the M3 Tracker. Regardless of the CES outcomes, all actions follow the same review and progress tracking process as other M3 actions (e.g., review with OAM, monthly M3 review, action owner assignment, etc.).

Responsibility Matrix:

Event Tasks	Delegable	Roles Authorized for Delegation
Perform CES Protocol (step described above).	☐	Non-delegable, event accountable must create task.
Document in the CES Tracker in the defined template.	☐	Non-delegable, event accountable must create task.
Follow up the action plan through the M3 tracker.	☐	Non-delegable, event accountable must create task.

- **Exclusions:** The CES is mandatory for all clients representing 85% of each subsidiary's total revenue and for all non-domestic clients, regardless of their size. For the remaining 15%, the decision to apply the self-assessment is at the discretion of the local COO and CEO.
- **Output Evidence:**
 - **Background:** The CES Findings Report is a compact report of the findings uncovered during the session, as well as the actions or the plan to execute based on those findings. Regarding the monitoring activity, for instance, the objective is not to score an interaction and to compare this score with the QA attributes score. It is rather to experience each interaction, identify what is in there that does not align with an outstanding experience for the customer, and check whether this was captured in the QA score. It may even mean that the way we are scoring each call does not contribute to a positive customer experience and that needs to be changed as well.

- **Defined TOPS Template:** In the CES Findings Report, you will find a comprehensive overview of the instructions on how to navigate and complete the support evidence for the CES protocol. Below, you'll find the structure for the output required to support Activity #1, Monitor 5 Interactions. Additionally, the CES Finding Report includes structures to support the other activities described above as mandatory for protocol completion (available in [TOPS Support Documents](#)).

Interaction	Representative BMS Ident	Call identified or unique ID	Interaction Driver / Problem Description	Representative understood the customer's issue.	Representative was able to diagnose the root cause.	Representative presented a solution to the customer.	Representative provided an overall great experience.	Minimum effort was required from the customer.	Value was created for the customer; the customer is better off after the interaction than before.	Estimated NPS (0-10)	QA follow-up	Issues / Opportunities

3.4 Operations Assistant Manager (OAM) Deliverable

3.4.1 MONTHLY ACTION PLAN (MAP) MEETING

Event Name	Event Type	Recurrence	Est. Duration (mins)	Required Output Evidence	Approved Support system	Accountable / led by	Participants
MAP Meeting	Meeting	Monthly	60	MAP Tracker (TOPS template).	TOPS App; Excel.	OAM	Supervisors

Definition: The MAP meeting is led by the OAM and includes all Supervisors together.

Purpose: The meeting is designed to review the previous month's performance, set objectives for the upcoming month, and create a clear action plan that assigns responsibility for achieving these goals. It serves as the monthly roadmap for Supervisors, translating M3 objectives into actionable for each Supervisor.

The MAP is designed to introduce new approaches and additional actions to address performance issues beyond the daily routine tasks. It offers several key advantages:

- Provided dedicated time to calibrate and educate the team on priorities and actions.
- Instills confidence in the client by ensuring a structured action plan is in place.
- Acts as the foundation for providing updates to clients and senior management on action plan progress.
- Prevents the need for new actions each week, maintaining focus on pre-agreed and planned actions.
- Promotes alignment within the team and reduces stress by avoiding last-minute plans that could lead to miscommunication and inefficiency.

Guidelines for the Event's Successful Execution - Before the meeting:

1. **Operational reporting:** The OAM should ensure there is a system in place for tracking and reporting on the KPIs in partnership with local Business Intelligence Team.
2. **Deviation, process assessment, and outlier identification:** The OAM should check the level of deviation between the CE for each KPI (namely by checking the VSF), identify any outliers, and assess the processes. This will help understand the performance and identify areas of improvement.
3. **Quantify performance drivers, root causes, and learning curves:** The OAM should quantify the factors driving performance, analyze the root causes of any issues, understand the learning curve of new hires, and assess the impact of outliers.

4. **Identify behaviors to be addressed:** Based on the data and analysis, the OAM should identify any behaviors that need to be addressed. This should be based on facts and, if needed, statistical correlation.

TOPS Process-Defined Agenda

- **Review Outliers per KPI:** Discuss outliers identified for each KPI. Outliers are CEs who are underperforming or overperforming.
- **New Hire Impact:** Review the performance of new hires and their impact on the overall performance. Understand their learning curve and identify ways to support their growth.
- **Glide Path:** Review the week-on-week progress towards the goals and define the following 6 weeks' milestones. The glide path is a plan that shows the trajectory of progress toward a goal.
- **Attrition Risk List:** Discuss the risk of attrition (CEs leaving the company) and plan for mitigating this risk.
- **PSP DMAIC Trigger:** Discuss if there is a need to trigger a PSP based on the performance review.
- **Project-Level Action Plan Update:** Provide specific feedback on trending items from QA, WFM, the staffing plan, or other relevant announcements as needed.

Event Requirements:

- **Responsibility Matrix:**

Event Tasks	Delegable	Roles Authorized for Delegation
Schedule meeting with the team.	☐	Non-delegable, event accountable must create task.
Guide and led the meeting.	☐	Non-delegable, event accountable must create task.
Produce and/or compile any support structure to ensure efficient and goal-oriented MAP Meeting.	☒	Can be delegated.
Update MAP Tracker previously and after the meeting.	☐	Non-delegable, event accountable must create task.
Share MAP Tracker with Supervisors.	☐	Non-delegable, event accountable must create task.

- **Output Evidence:**
 - **Background:** The action plan should be tracked on a team level and maintained as a live document. The KPI section is intended to be a reference from the existing reporting. The tracker records and tracks actions and commitments agreed upon in the monthly meeting, ensuring clarity, accountability, and progress towards performance improvements.
 - **Defined TOPS Template:** MAP Tracker (available in [TOPS Support Documents](#)).

LOB / Market	Issue/Opportunity	Root Cause	Action	Action Owner	Original Deadline	Current/Rea I Deadline	Last Review	Progress Update	Status
Danish	High # calls transferred to 2nd line	Lack of Knowledge on new product features in 1st line	Refresh Training for 1st Line and for the Inbound Sales Team	Training Manager	15-jul	17-jul	17-jul	10/10: trained 50 agents first line next 18/10: trained 75 agents first line next	In Progress
Danish	High # calls transferred to 2nd line	Lack of access to be able to visualize customer packages	Provide proposal to Client about additional permissions for 1st line (perform BC and obtain security approval prior)	OAM	17-jul	16-jul	16-jul		Closed Successfully

3.4.2 DAILY SUPERVISOR MEETING (DSM)

Event Name	Event Type	Recurrence	Est. Duration (mins)	Required Output Evidence	Approved Support system	Accountable/ led by	Participants
DSM	Meeting	Daily	20	DSM Meeting Log (TOPS template).	Excel; TOPS App.	OAM	Supervisors; QA and/or QA Manager is not a requirement (up to each subsidiary/ country)

Definition: The DSM is led by the OAM and attended by all Supervisors. The meeting must not take more than 20 minutes.

Purpose: The meeting aims to review daily and trended results against goals, establish daily priorities, and assess process-level execution, ensuring each Supervisor understands current performance, KPI trends, daily priorities, relevant updates, and celebrate success.

Guidelines for the Event’s Successful Execution:

- **Efficiency Principles:** DSM should be efficient for the Supervisor and not structured to accommodate the OAM's schedule. DSM should be a highly efficient checkpoint session, lasting no more than 20 minutes per day, with an additional 10 minutes for preparation. To meet this goal, it may be divided into multiple shorter sessions to reduce overall event duration.
- **OAM Planning:** OAM should plan the DSM to maximize the coverage and attendance of Supervisors, preferably respecting always the same time and place. Because each Supervisor must attend one DSM every day, the OAM might need to plan multiple DSMs in the same day to ensure full team coverage (as per the previous point).
- **KPI Review:** OAM must open the reporting that monitors operational KPI performance (KPIs defined for the operation and/or LOB following visualization guidelines defined according to [BEST BI](#)), conduct a KPI review, and have an overview of performance by per project, team, and CE before the meeting starts to ensure its efficiency.

TOPS Process-Defined Agenda:

- **Review actions from the previous DSM (5 minutes):** The meeting should start by following up on the actions agreed upon in the previous day's meeting.
- **Real-Time Management Routine & Staffing Review (5 minutes):**
 - Attendance of the day (scheduled vs. presence) and schedule adjustments.
 - Staffing adjustments (CE allocations, skill prioritization, shift adjustments, align with operational KPI and backlogs, etc.).
 - Discuss shrinkage events (client meetings, upskill, plan coaching, any others).
 - Communicate the agreed-upon time slots or periods during the day with WFM when Supervisors can conduct coaching sessions, along with the maximum number of CEs that can be coached simultaneously.
- **KPI Review - Service Metrics, Quality, Efficiency, Customer Experience (5 minutes):**
 - Overall KPI Performance: Review prior day, week-over-week, month-over-month, and month-to-date performance. Reinforce priorities and focus areas.
 - Supervisor KPI Performance: Examine the same metrics for Supervisors, highlighting key focus areas.
- **Team Pulse (5 minutes):**
 - Each Supervisor shares a brief update, covering actions on MAP items, coaching progress, key behaviors, team-level updates, risks, emerging topics, best practices, and action plan progress.
 - Note: The OAM should encourage engagement by asking questions like, “How are you working with your team? What steps are you taking to help them meet their goals? How did it go?”
 - Provide specific feedback on trending items from QA, WFM, the staffing plan, or other relevant announcements as needed.

Event Requirements:

- **Responsibility Matrix:**

Event Tasks	Delegable	Roles Authorized for Delegation
Send meeting invites.	☐	Non-delegable, event accountable must create task.
Share Meeting Minutes.	☒	Can be delegated.

- **Output Evidence:**

- **Background:** A daily-reviewed tracker with actions, owners, and deadlines ensures clear accountability, efficient follow-up, transparency, prioritization, performance monitoring, and consistent record-keeping, ultimately enhancing organizational effectiveness and alignment. It is crucial to have a proper structure to foster a productive working culture and avoid unstructured, non-actionable email-based minutes.

- **Defined TOPS Template:** DSM Meeting Minute Log (available in [TOPS Support Documents](#)).

Raised Date	Discussed Topic	Discussion Lead	Description	Action Required	Assigned To	Due Date	Status
[Action 1]	[Staffing/KPI/Others]	[name]	[additional topic details]	[Yes/No]	[Name]	[Due Date]	[Pending/Completed]
[Action 2]	[Staffing/KPI/Others]	[name]	[additional topic details]	[Yes/No]	[Name]	[Due Date]	[Pending/Completed]
[Action 3]	[Staffing/KPI/Others]	[name]	[additional topic details]	[Yes/No]	[Name]	[Due Date]	[Pending/Completed]

3.4.3 SUPERVISOR SHADOWING & OBSERVATION

Event Name	Event Type	Recurrence	Est. Duration (mins)	Required Output Evidence	Approved Support system	Accountable/ led by	Participants
Supervisor Shadowing & Observation	Action	At least one observation and one shadowing per month	35	Supervisor Shadowing Form (TOPS template); Supervisor Observation Form (TOPS template).	TOPS App; BMS; RISE.	OAM	Supervisor, CE.

Definition: OAMs monitor the quality of support provided to CEs by observing Coaching Sessions and/or Monthly Performance Reviews conducted by Supervisors and assessing Supervisors' ability to fulfill their duties through shadowing. This event must occur at least once per month for each Supervisor, and the OAM performs one shadowing and one observation of a coaching session.

Purpose: Supervisor Shadowing & Observations aims to enhance the coaching skills of Supervisors and help OAMs identify improvement opportunities for their development. Coaching behaviors observed during these sessions should be discussed in the Mid-month Supervisor Development & MAP Review. Any identified behaviors that need improvement should be addressed to better equip Supervisors for their duties, thereby supporting the overall performance of their team and the entire operation.

Guidelines for the Event's Successful Execution:

- This event should not be viewed as a checklist but as an opportunity to observe and mentor the Supervisor in executing their responsibilities.
- It is not necessary to observe coaching sessions every week; the minimum requirement is to evaluate each Supervisor monthly, one session by observing a coaching session or another one shadowing the Supervisor in other responsibilities.

Event Requirements:

- **Responsibility Matrix:**

Event Tasks	Delegable	Roles Authorized for Delegation
Shadowing and/or Coaching Observation.	☐	Non-delegable, event accountable must create task.
Submission of the event output evidence.	☐	Non-delegable, event accountable must create task.

- **Output Evidence:**

- **Background:** The Supervisor Observation Form is a tool used by the OAM to measure coaching efficiency and ability for coping with Supervisor duties. This form also serves as the foundation for the “Coach the Coach” and grounds discussions in facts. It is globally defined and reviewed to ensure TP's commitment to coaching behavior and Emotional Intelligence.
- **Defined TOPS Template:**
 - **Supervisor Observation:** When the OAM observes a Supervisor conducting coaching sessions or Monthly Performance Reviews, the Supervisor Observation Form (SOF) must be selected. This globally standardized form evaluates 12 key behaviors across four steps.
 - **Supervisor Shadowing:** If the OAM is shadowing the Supervisor performing their duties, the Supervisor Shadowing Form should be selected. Like the SOF, this is also a globally standardized form.
 - **Scoring Criteria:** Regardless of the form chosen, the OAM must score each item using the following classifications: Well Performed, Partially Performed, Not Performed, Not Observed.

Application	This form must be used when observing Supervisors performing the following: - Daily Task Supervisor Shadowing
KEY EVENTS	Activity description and expectation
Time Mgmt	Ability to set priorities up for the day (organize their day)
	Ability to manage time with efficiency
	>40% Time is spent with agents (monitoring, coaching...)
	Ability to deliver on time any feedback and provide answers for any other requests (OAM or internal)
Team Mgmt	Review productivity, quality and various KPIs to adjust game plan / priorities as needed (based on CEs trends, outliers and new hires needs).
	Strategic seating (if Brick-and-mortar)
	Ability to set and communicate target assertively with Customer Experts
	Ability to handle crisis with the team/Customer Experts
Communication	Work closely with the real-time analyst to drive productivity and adherence, and to support TOPS event planning.
	Ability to properly and timely communicate with colleagues and other functions (HR, QA, Training, any other)
	Show positive attitude on the floor / with team
Tool Expertise	Correct understanding and usage of all reporting
	Use of TOPS tools as intended (GP, EOF, MPR, others)
Environment	Take care of the production floor working environment (facilities, workstations readiness, cleaning, others)
	Promote adoption of GESCP, Clean desk and security policies

Application	This form must be used when observing Supervisors performing the following: - CE Coaching Session - Monthly Performance Review	
STEP	KEY BEHAVIORS	
Planning	● Well Prepared: Supervisors should have a clear plan for the session, including the topics to be discussed, goals to be achieved, and methods to be used. They should also consider the brain style of the customer expert being coached. ● Utilize Both Emotional and Rational Focus: Prepare from both an emotional and rational perspective. Consider how to create an ideal emotional climate for the session. ● Grounded on Facts: Coaching should be based on observable behaviors and tangible examples, not on assumptions or personal opinions. Also, Analyzes and compares KPI data over time to assess performance and make informed, tailored coaching recommendations.	
Setting the scene	● Personal Touch “Buy-in”: Supervisors should start the session by building rapport with the Customer Expert, using a non-judgmental and empathetic approach to show genuine care and interest in their thoughts and feelings. ● Objectives: Supervisors co-create the purpose of the coaching session together with the Customer Expert, taking into account the Customer Expert’s drive style (the way individuals approach tasks, challenges, and their overall work environment - practical, idealistic, analytical, flexible, others).	
During the session	● Encourage Discussion: Supervisors should foster an open dialogue, encouraging the Customer Expert to share their thoughts, ideas, and feelings. They can do this by slowing down, pausing, and allowing silence during the conversation. ● Customer Expert Suggests Improvement Priorities: Supervisors should encourage the Customer Expert to identify areas for improvement and set their own priorities. ● Listen & Observe Carefully to Extract Info: Supervisors should practice active listening, giving the Customer Expert space to express their opinions and suggest actions. Supervisors should maintain non-judgmental body language and observe non-verbal cues like facial expressions and posture in addition to spoken words. ● Questioning with Curiosity: Supervisors should use a mix of open-ended and closed-ended questions with curiosity and non-judgment to probe deeper into the Customer Expert’s thoughts, feelings, assumptions, and values. ● Explore Solutions: Supervisors should work with the Customer Expert to identify and brainstorm opportunities for improvement and define clear next steps, using an innovative decision style. ● Apply & Develop Effectively: Supervisors should use appropriate coaching tools, such as role-play or model calls, Brain Styles, or Brain Talents to help the Customer Expert develop new skills and behaviors. ● Celebrate Progress: Supervisors should recognize and highlight the progress they have witnessed in the Customer Expert with authenticity. ● Stay Authentic & Emotionally Aware: Supervisors should be genuine and empathetic, being aware of their own emotions and those of the Customer Expert. ● Leverage Strengths: Supervisors should be aware of the Customer Expert’s top Brain Talents or Brain Style and leverage them to increase impact during the coaching session (if known). ● Structure Session with the Change MAP: Supervisors will use the Change MAP to structure the session using the Engage-Activate-Reflect model to build engagement and increase energy (if known)	
Takeaway	● Lock in the Wins and Lessons: Supervisors should invite the Customer Expert to reflect on what they learned about themselves and their customers, and how these learnings can support their goals. Together, they should examine the results of the coaching conversation from both logical and emotional perspectives. ● Clear, Understood, and Commonly Agreed Next Steps (SMART Objectives): Supervisors and the Customer Expert should agree on Specific, Measurable, Achievable, Relevant, and Time-bound (SMART) objectives for the Customer Expert’s development and confirm when they will follow up on these.	

3.4.4 MID-MONTH REVIEW: SUPERVISOR DEVELOPMENT & MAP

Event Name	Event Type	Recurrence	Est. Duration (mins)	Required Output Evidence	Approved Support system	Accountable / led by	Participants
Mid-month Review: SUP Dev & MAP	Meeting (1:1)	Monthly	45	Supervisor Development & Review form.	TOPS App; BMS; RISE.	OAM	Supervisors

Definition: structured monthly one-on-one session between the Operations Assistant Manager (OAM) and each Supervisor.

Purpose: Serve as a touchpoint to coach and develop the Supervisor while tracking progress on their MAP. It provides a forum to assess performance, address challenges, and align priorities for the upcoming weeks. Leveraging insights from various assessments, the session ensures targeted feedback, recognition, and continuous improvement.

Guidelines for the Event’s Successful Execution:

- **OAM Shadowing:** The OAM must shadow or observe the Supervisor conducting coaching sessions prior to this session. This practice ensures continuity in the Supervisor's development plan, grounds discussions in factual observations, and monitors the progress of previous discussions.
- **Shadowing vs. Coaching Observation:** The OAM should decide whether shadowing or coaching observation is needed each week based on key gaps, improvement opportunities discussed with the Supervisor, and the performance trends of their CEs.
- **Review of Shadowing and/or Coaching Observation Forms:** Before the monthly one-on-one with the Supervisor, the OAM must review the notes from these shadowing or coaching sessions.
- **Promoting efficiency and best practice:** the OAM may consider planning the monthly one-on-one meeting with Supervisor straight after completing shadowing and/or coaching observation.

TOPS Process-Defined Agenda:

- **1.1 Coaching Delivery Review (10 minutes):** Discuss the progress and quality of coaching, its effectiveness, and areas for improvement. Agree on action items and next steps for the upcoming review.
- **1.2 Shadowing Debriefing (10 minutes):** Challenge the Supervisor to improve in time management, team management, communication tools expertise, and team environment based on observations made during shadowing. Agree on action items and next steps for the upcoming review.
- **2.1 Pulse Check – Deliverables Execution (5 minutes):** Review the execution of deliverables such as the CE Development Plan, coaching levels, CE evaluations, etc.
- **2.2 Pulse Check – People Engagement (5 minutes):** Review attrition risk for CEs, action plans for retention, general dissatisfaction topics, and the support provided to new hires, including the approach taken.
- **3. Monthly Action Plan Progress (10 minutes):** Assess current performance against commitments, discuss outliers, evaluate how Supervisors are engaging with their teams, support new hires, and agree on any necessary recovery steps.

Event Requirements:

- **Responsibility Matrix:**

Event Tasks	Delegable	Roles Authorized for Delegation
Send meeting invites.	☐	Non-delegable, event accountable must create task.
Submission of the event output evidence.	☐	Non-delegable, event accountable must create task.

- **Output Evidence:**
 - **Background:** document the activities and progress discussed and capture performance insights, feedback, and the status of the MAP to support structured coaching and development.
 - **Defined TOPS Template:** Supervisor Development & MAP review form (available in [TOPS Support Documents](#)).

1.1 COACHING OBSERVATION (only required to cover 1.1 or 1.2)	Comment	Field Type

3.4.5 MONTHLY & QUARTERLY PERFORMANCE REVIEW FOR SUPERVISORS

Event Name	Event Type	Recurrence	Est. Duration (mins)	Required Output Evidence	Approved Support system	Accountable/ led by	Participants
Monthly & Quarterly Performance Review Supervisors	Meeting	Monthly (replaced by Quarterly review in that month)	45	Monthly Performance Review; Quarterly Performance Review forms.	Monthly: TOPS App; BMS; RISE Quarterly: Defined by HR System(typically MyTP).	OAM	Supervisors

Definition: Formal evaluation process between a Supervisor and OAM, designed to assess the Supervisor's performance against set agreements during the month, and to continuously develop Supervisor. The monthly is replaced by the HR Quarterly review when scheduled.

Purpose: The review aims to evaluate performance, identify areas for improvement, recognize achievements, set future goals, and facilitate leadership development. It ensures that Supervisors effectively support and develop their CEs to consistently meet team targets. Additionally, the review includes an assessment of the execution of TOPS and other deliverables, ongoing progress, and the MAP progress, serving as a "close the loop" event. The monthly review should also serve as a checkpoint to assess their progress toward agreed quarterly commitments.

The TP global performance review process evaluates how each individual is performing against their commitments. Below, you can refer to the commitments driven by TOPS as part of the supervisor role. Additional guidance from global HR can be found [here](#).

Guidelines for the Event's Successful Execution - Before the meeting:

- **Schedule the Monthly and Quarterly Performance Reviews in Advance:** The OAM may consider booking these meetings for the entire year to ensure organized calendars, establish a strong image of organization for the teams, and promote a prepared environment for all participants.
- **Analyze KPI Data:** The OAM should examine the Supervisors' team performance data and trends to provide structured feedback on outcomes.
- **Assess TOPS Adoption and Execution:** The OAM evaluates the PHAROS data (section 4.5) to provide structured insights on the adoption and execution of TOPS events.
- **Evaluate Shadowing & Observation Forms:** The OAM should assess recent shadowing and observation forms, as well as feedback provided over the past month, to identify improvement opportunities and set clear goals for the coming month.
- **Monitor MAP Progress:** The OAM should review the completion and execution of actions aligned with the plans established during the MAP meeting, as well as the quality of their implementation.

TOPS Process-Defined Agenda:

- **Discuss Performance:** The OAM and Supervisor review the CE's performance, focusing on the KPIs identified in previous evaluations.
- **Provide Feedback:** The OAM gives constructive feedback to the Supervisor, recognizing strengths and highlighting areas needing improvement.
- **Set Goals and Commit:** Together, the OAM and Supervisor agree on specific goals and commitments for the upcoming period.
- **Review Supervisor Development Actions:** The OAM discusses identified development actions for Supervisors, focusing on growth and areas for enhancement.
- **Summarize Review Outcomes:** The OAM provides a brief summary of key takeaways from the review, ensuring alignment and synchronization between the OAM and Supervisors on next steps and commitments.

Event Requirements:

- **Responsibility Matrix:**

Event Tasks	Delegable	Roles Authorized for Delegation
Send meeting invites.	☐	Non-delegable, event accountable must create task.
Submission of the event output evidence.	☐	Non-delegable, event accountable must create task.

- **Output Evidence:**
 - **Background:** Provides evidence of discussions, formalizes agreed development plans and commitments, and maintains a consistent record of developmental efforts.
 - **Defined TOPS Template:** MPR Supervisor for monthly and as defined by local and global HR for quarterly (available in [TOPS Support Documents](#)).

3.5 Supervisors Deliverables

3.5.1 DAILY SUPERVISOR GAME PLAN

Event Name	Event Type	Recurrence	Est. Duration (mins)	Required Output Evidence	Approved Support system	Accountable/ led by	Participants
Daily Game Plan Execution	Action	Daily	10	To-Do List	TOPS App; BMS; RISE.	Supervisors	NA

Definition: The Game Plan is the Supervisors' to-do list for the day, where the Supervisors state which CEs will observe and coach throughout the shift, taking into consideration the program needs and outlier priorities.

Purpose: The main goal of the Game Plan is to establish objectives for the day and ensure that the needed progress is made toward securing the objectives for the week. The Game Plan is there to remind Supervisors of what is important, spending most of the time on the development of the CEs. This planning process helps Supervisors develop effective time management skills and learn how to manage priorities effectively.

Guidelines for the Event's Successful Execution:

- CE Registration:** Register the names of the CEs (CEs) to be coached.
 - Priority Alignment:** Align coaching priorities based on MAP insights, DSM directives, and individual CE needs.
 - Game Plan Creation:** Build a structured game plan detailing the order and type of coaching activities to be performed.
 - Strategic Seating:** Arrange CE seating, whether physical or virtual, to position outliers and priority CEs closer to you for easier observation and support. This practice is straightforward in an office setting, but in remote environments, you can replicate it using tools like MS Teams (e.g., pinning CEs, creating dedicated channels, or similar virtual setups).
- Time allocation:** Ensure that at least 30% of the Supervisors' time is spent with CEs.

Event Requirements:

- Responsibility Matrix:**

Event Tasks	Delegable	Roles Authorized for Delegation
Fill Daily Game Plan aligned with priorities.	☐	Non-delegable, event accountable must create task.

- Output Evidence:**
 - Background:** The To-Do List is the defined TOPS requirement for compliance evidence, supporting Supervisors in registering events scheduled that are directly related to CEs.
 - Defined TOPS Template:** To-do list.

3.5.2 CE COACHING

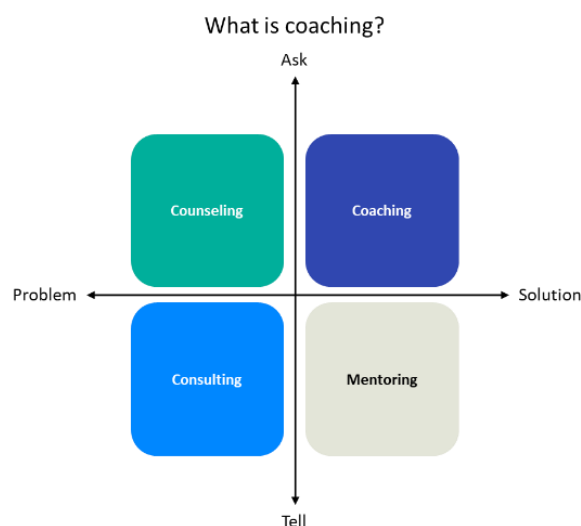

Event Name	Event Type	Recurrence	Est. Duration (mins)	Required Output Evidence	Approved Support system	Accountable/ led by	Participants
CE Coaching	Meeting (1:1)	Weekly for New Hires and Outliers; Monthly all the remaining CEs.	30	CE Coaching form (TOPS template).	BMS; RISE	Supervisors;	CEs

Definition: The CE (CE) Coaching Process is divided into three distinct phases:

1. **Observation:** This is the preparatory phase of the coaching session. Supervisors must observe CEs during interactions to identify behaviors that impact KPIs.
 - A minimum of three observations is necessary to accurately assess these behaviors.
 - These observations can be done by shadowing the CE during interactions or a combination of both.
 - Supervisors must decide whether to focus on random interactions or specific ones based on MAP priorities.
 - All observation details should be documented in the CE Coaching Form.
2. **Phase 2 - Coaching Session:** This is a dedicated 30-minute session led by the Supervisor, focused on providing coaching to the CE based on the observations made in Phase 1. The goal is to address identified behaviors and support the CE in making improvements to align with performance targets.
 - Each CE is expected to have at least one coaching session with their Supervisor per month, with frequency adjusted as required.
 - New hires and CE outliers are required to have one coaching session per week.
 - Observed behaviors may have either a positive or negative impact on customer experience and, consequently, KPI performance. Both types are important and will be addressed differently during coaching.
3. **Phase 3 - Follow-up:** The follow-up phase confirms whether the coaching session was successful and ensures that the targeted behaviors are being applied.
 - Follow-up occurs after the coaching session, before the next coaching cycle begins (which could be next month, next week, or sooner if immediate action is needed).
 - A separate meeting is not required for follow-up. It can be conducted through an observation focused solely on the behavior that was coached. Follow-up is only necessary for behaviors identified as “Coaching required.”

Purpose: address long-term, persistent behaviors, support continuous improvement with the ultimate goals to help CEs meet performance targets by setting clear goals and using appropriate tools:

- **Root Cause Identification & Commitment:** Focuses on identifying the root causes of performance gaps and establishing commitments for improvement. This is done through discussions with the CE, exploring the behavior, its root causes, and potential solutions, all within a fact-based, step-by-step improvement plan.
- **Supporting Performance:** The goal is to support each CE in achieving their monthly targets with clear direction, continuous support, and regular feedback, while recognizing and sharing successes with the team.
- **Follow-up:** Ensures that agreed-upon actions are successfully implemented and maintained over time.

Guidelines for the Event's Successful Execution of the Coaching Session:

Event Planning:

- **Coaching Time Alignment:** Align with WFM time slots or periods during the day when Supervisors can conduct coaching sessions, as well as the maximum number of CEs that can be coached simultaneously.
- **Review KPI performance:** The Supervisor should review the CE's performance trends to link behavior with KPI results, enhancing coaching quality and ensuring commitment at the session's conclusion.
- **Review the Observations:** The Supervisor must examine the latest identified strengths and opportunities by looking up the Observations comments.
- **Review Coaching Forms:** The coaching session represents a follow-up to the previous session and must be presented as a continuation of the previous coaching.
- **Define the coaching tool for the session:** The Supervisor should select the appropriate coaching tool as referenced in the coaching framework section (please find additional details about coaching tools in the section 3.6
- **Notify CEs of their coaching session once the plan is set:** give CE time for mental preparation and self-reflection after being identified in the Daily Game Plan.

Event Execution – What :

- **Set clear goals:** Define the purpose of the session and what both parties hope to achieve by the end. Sample questions could include: "What behavior would you like to discuss?", "What do you want to gain from this discussion?", "How will you know if you have succeeded?", and "Where would you like to focus and develop your CE?"
- **Coaching Approach:** Coaching typically involves asking questions, but it's not always necessary. Sometimes, guiding the CE toward the root cause identification or the solution can lead to a better understanding (coaching, mentoring, consulting, counselling).
 - **Behavioral coaching:** Use the appropriate coaching tool to improve the CE's behavior and performance, focusing on areas of improvement as well as strengths. Discuss behaviors that are positively impacting performance, which should be continued and potentially shared with the team, as well as behaviors that need to be changed.
 - **Set Commitment and improvement plan:** Set an agreement on the identified gaps and the steps to be taken for improvement. Establish clear goals for the CE to achieve before the next session, grounded in KPI commitments.
 - **Adjust the session based on the outcome of the observation:**
 - **"Well Performed" behaviors:** Focus coaching on identifying what the CE is doing well, understanding the reasons behind these successful practices, and exploring how they can be shared with the broader team. No follow-up is required.
 - **"Coaching Required" behaviors:** Flag these behaviors for follow-up to evaluate the effectiveness of the coaching. The follow-up should occur within a few days after the session.

Event Execution – How:

- **Grounded in fact:** The coaching and discussions should be based on facts and not on assumptions.
- **Open-minded:** Both parties should be open to feedback and willing to make changes for improvement.
- **Participative session:** The supervisor must encourage the active participation of the CE.
- **Emotional bond:** The Supervisor should strive to build an emotional bond with the CE, fostering a supportive and trusting environment.

Important note: Coaching should be the primary focus of the Supervisors who are encouraged to prioritize coaching efforts.

Event Requirements:

- **Responsibility Matrix:**

Event Tasks	Delegable	Roles Authorized for Delegation
Perform CE Observations.	☐	Non-delegable, event accountable must create task.

Plan the coaching session (as described above).	☐	Non-delegable, event accountable must create task.
Coaching Execution (including from submission in TOPS defined digital support system).	☐	Non-delegable, event accountable must create task.
Coaching follow up.	☐	Non-delegable, event accountable must create task.

- **Output Evidence:**

- **Background:** Provide a structured record of observations, coaching and follow up process. Important element to support Monthly Performance Review of both CE and Supervisor.
- **Defined TOPS Template:**
 - **CE Coaching Form:** A form with a list of behaviors applicable to all industries and operations, except for the Trust & Safety queue.
 - **CE Coaching Form Trust & Safety (T&S):** T&S operations must implement a customized coaching form tailored to their business specifics. While TOPS provides a recommended global coaching form as best practice, it is not mandatory to use this exact version. However, it is required that T&S operations adopt a coaching form that differs from the standard version and is adapted to their operational needs. The form included in this document serves as a recommendation. T&S teams are free to use a variant, but prior to implementation, they must inform the global TOPS team of the final version selected to ensure global synchronization and reporting compliance.
 - **Note:** Please find the editable document in [TOPS SharePoint](#).

BEHAVIOURS (select the behaviour "well performed" and/or the behaviour "to coach")

1. Empathic communication	5. Negotiating and influencing
- Express oneself clearly in oral, written, and visual forms. - Emphasize tone and clarity in verbal interactions, maintain proper spelling, grammar, and structure in written communication, and use confident body language for visual engagement. - Demonstrate active listening by giving full attention to the speaker, acknowledging their points, and responding thoughtfully. - Adjust your communication style to match the customer's level and preferences. - Demonstrate genuine care, courtesy, respect, and positive positioning to build strong, respectful relationships.	- Understand the needs expressed by the customer and be their partner in clearly communicating relevant information and policies. - Educate customers on products/services and evaluate intent to purchase. - Honor emotions while overcoming objections and use de-escalation techniques.
2. Understanding Emotions and Needs	6. Expertise
- Comprehend customer requests, needs, and urgency and the concerns under those emotions. - Consider past customer experiences, case history and tailor communication accordingly. - Commit to resolving issues and maintaining open communication. - Respond to the customer's feelings and, as their feelings change, respond accordingly with empathy.	- Possess strong product/service knowledge and use available tools effectively. - Follow procedures and make appropriate entries/updates. - Handle processes and adjustments correctly and multitask efficiently.
3. Inspire Confidence	7. Goal Orientation
- Demonstrate genuine care, reliability, and professionalism in all interactions. - Address all questions and complaints with a professional and courteous response. - Use language that highlights the benefits to the client or team, and set clear expectations to avoid misunderstandings. - Skillfully navigate emotions and de-escalate conflict situations by remaining calm, empathetic, and solution-oriented.	- Maintain organized and solution-focused communication. - Position yourself as the customer's ally, making it clear that you are working together to solve the problem. - Manage transaction control and address all issues. - Confirm the proposed solutions with the customer and gain their agreement on the next steps.
4. Investigation/Diagnosis	8. Customer-centered
- Deep dive to identify causes and impacts of customer requests; get the data you need to advocate on the customer's behalf. - Ask appropriate questions and troubleshoot effectively. - Identify the root cause accurately.	- Manage cases to enhance the overall customer journey. - Respond and acknowledge timely, escalate issues appropriately, and follow up for resolution. - Identify and raise improvement opportunities. - Overall attitude, tone, and attention support the customer to feel special.

BEHAVIOURS	
1. Investigation/Diagnosis - Identify correct violation of policy and appropriate risk level. - Correct investigation of violation using guidelines, policies and previously shared model cases. - Apply appropriate queue moderation logic and exceptions.	4. Goal Orientation - Process proficiency and policy excellency. - Case handling in an autonomous manner. - Treats critical and sensitive cases with utmost rigor. - Understands which queue should be moderated first.
2. Expertise - Possess strong product/service knowledge and use available tools effectively. - Follow procedures / SOPs and make appropriate conclusions. - Handle processes and adjustments correctly verifying correct tools	5. Inspire Confidence - Proactive self study -The moderator keeps up with the latest guidelines to stay accurate. - Moderates content attentively, takes necessary time to process each case, stays focused. - No evasive behavior observed (Refresh/Close Page, Deferment), Idle status, Delays, Schedule adherence.
3. Customer-centered - Moderate grey-area cases according to client/ process guidelines. - Acknowledges, responds, and escalates real-world events/trends in a timely manner.

3.5.3 FEEDBACK DELIVERY (FAILED / SUCCESSFUL INTERACTIONS)

Event Name	Event Type	Recurrence	Est. Duration (mins)	Required Output Evidence	Approved Support system	Accountable / led by	Participants
Feedback Delivery	Meeting (1:1)	Daily	15	BMS Feedback for Evaluations	TOPS App; BMS; Rise	Supervisors	Covering all CEs

Definition: Feedback is essential to performance management and coaching. While it can be one-way, effective feedback often involves dialogue to explore the reasons behind performance. It should be given for all interactions that miss QA scores, contain critical errors or demonstrate positive achievements.

Purpose: Feedback motivates and builds awareness, helping CEs understand strengths and areas for improvement. Supervisors should also use it to reinforce positive behaviors and achievements.

Guidelines for the Event's Successful Execution:

To leverage the potential for feedback on the performance of the CE, the following should be assured:

- **Pick the right timing:** Feedback should not be confused or mixed up with coaching. It can be part of the coaching session to celebrate the good performance, and Supervisor can use the feedback as starting point for a coaching session.
- **Be Specific:** Avoid vague statements and provide clear, concise, and specific feedback. Use concrete examples of what went well or didn't go well.
- **Be Timely:** Feedback should be given as close to the event as possible, ideally on the same day. The more time that passes, the less effective the feedback may be
- **Provide a clear definition of correct:** Ensure the message is clear for what is expected to be done.
- **Ensure Understanding:** Make sure the individual understands the feedback. Ask them for confirmation of their understanding.
- **Be positive:** Positive feedback is significantly more effective than negative feedback. Therefore, seize every opportunity to provide positive feedback and reinforcement. Highlight what is already working well and identify areas for improvement.

Feedback triggers:

1. **Failed interaction:** Provide feedback on interactions that missed the defined score on the QA monitoring grid. Feedback must be provided within 48 hours.
2. **Critical Errors:** Provide feedback on interactions where a critical error was identified on the QA monitoring grid. Feedback must be provided within 24 hours.
3. **Successful interaction:** Congratulate the CE on an interaction that demonstrates very positive quality performance.

Event Requirements:

- **Responsibility Matrix:**

Event Tasks	Delegable	Roles Authorized for Delegation
Give feedback to CE.	☐	Non-delegable, event accountable must create task.
Submit evidence in defined TOPS digital system.	☐	Non-delegable, event accountable must create task.

- **Output Evidence:**
 - **Background:** every CE QA evaluation enables the Supervisor to document the delivery of feedback. Once the feedback is marked as delivered, the CE can acknowledge it.
 - **Defined TOPS Template:** QA monitoring form.

3.5.4 CE DEVELOPMENT PLAN (CEDP)

Event Name	Event Type	Recurrence	Est. Duration (mins)	Required Output Evidence	Approved Support system	Accountable/ led by	Participants
Expert Development Plan	Action	At least once per month	20	CE Development plan (TOPS template).	TOPS App; BMS; RISE.	Supervisors	NA

Definition: The EDP integrates key inputs from performance management to support each CE's growth and reflects management's commitment to their development. Supervisors must keep the CEDP updated regularly to accurately reflect each CE's progress and ensure it is discussed collaboratively during the Monthly Performance Review (MPR).

Purpose: The primary objective of the CEDP is to ensure that each CE receives a personalized development plan. This plan aligns with their unique strengths and opportunities and serves as an employee profile to facilitate ongoing understanding within TP. It aids in the transfer process to other projects by promoting the continuation of the CE's development. The receiving Supervisor is provided with detailed information about the CE, ensuring seamless support and growth.

Event Requirements:

- **Responsibility Matrix:**

Event Tasks	Delegable	Roles Authorized for Delegation
Updated evidence in defined TOPS digital system.	☐	Non-delegable, event accountable must create task.
Share and update CEDP with CE.	☐	Non-delegable, event accountable must create task.

- **Output Evidence:**

- **Background:** The CEDP form must be updated every time a Supervisor wants to promote changes in the current CEDP items included in the latest submission. Must be reviewed and updated at least monthly before the MPR between the Supervisor and CE.
- **Defined TOPS template:** CE Development Plan or CEDP (available in [TOPS Support Documents](#)).

Employee Profile (ongoing/live): Supervisor <u>scores</u> using pre-defined rank in the following sections	
A	Ability to cope with the tasks and daily routine [drop box with options below]
1	Needs guidance and encouragement to develop necessary skills.
2	Feels uncomfortable with the tasks and targets given, expressing signs of being overwhelmed.
3	Fulfills tasks with commitment and punctuality but prefers not to take on additional responsibilities. Feels uncomfortable with new ideas or changes in tasks or targets.
4	Is committed to their tasks and targets, ensuring processes and timelines are effectively respected.
5	Shows high standards for performance, works autonomously, and is highly committed to their tasks, ensuring the stability of their results.
B	Problem-solving and continuous improvement [drop box with options below]
1	May benefit from additional guidance, support, and encouragement to approach challenges.
2	May need additional motivation and encouragement to drive execution challenges and build confidence.
3	In a situation of crisis, acts swiftly and immediately starts the problem-solving process.
4	Show a high degree of determination in solving different types of problems and constantly offer proposals for continuous improvement.
5	High technical and psychological maturity. Show high proficiency in solving all kinds of problems. Show a high level of creativity and innovation.
C	Commitment and responsibility [drop box with options below]
1	Needs continuous follow-up and guidance to address resistance and meet commitments.
2	Might be meeting contractual requirements but could benefit from a more engaged and committed attitude towards work.
3	Delivers basic requirements with a minimum level of involvement.
4	Show strong commitment and availability for new tasks and responsibilities.

5	Highly determined to accept new challenges. Clear proactivity and high degree of commitment to TP's mission and goals.	
D	Attitude towards work [drop box with options below]	
1	Focuses on delivering the assigned duties only.	
2	Comfortable with their current position and not looking for any career progression.	
3	Show a moderate degree of professional responsibility with interest and with moderate technical and professional maturity according to the targets.	
4	Demonstrates a professional attitude that stands out from the rest of the team, with high performance and strong interpersonal relationships.	
5	Exhibits an excellent attitude, positivity, creativity, and innovation, and is a high performer. Shows the highest degree of technical and psychological maturity.	
E	Project knowledge [drop box with options below]	
1	Requires additional training or support to develop necessary skills.	
2	Benefits from additional training or development opportunities to enhance their skills and show progression.	
3	Benefits from additional training or development opportunities to perfect and further develop their current skills and knowledge.	
4	Fluent and autonomous, knows and is able to quickly find the necessary information.	
5	Show a high level of knowledge and is capable of helping other colleagues in the project. It is a reference for others. Subject matter expert.	
F	Absenteeism and delays [drop box with options below]	
1	Frequently Absent or Late: Frequently arrive late or has unscheduled absences, often without adequate notice, which impacts their work performance and potentially affects team's work.	
2	Occasionally Late and Does Not Inform: The employee is occasionally late or has a few unscheduled absences and typically does not inform the manager or the company about expected delays or absences.	
3	Occasionally Late but Informs: The employee is occasionally late or has a few unscheduled absences, but always informs the manager or the company about expected delays or absences in advance.	
4	Consistently Punctual: The employee consistently arrives on time and rarely takes unscheduled absences.	
G	Propensity to leave in the next 30 days [drop box, options below]	
	Low / Medium / High	
	Please detail reasons if high [drop box, options below]	
	Back to School	Operational performance
	Career Development	Project change/promotion Work/Life Balance
	Compensation	Recruitment expectations Other
	Health & Family	Salary, benefits and incentives
	Job Role	Scheduling issues
	Management	Team / work environment
	Relocation	Work Environment
	TP Relocation Package	
	TP Support Processes (IT, HR, others)	
H	Personal Aspirations [text]	
	[text]	
I	Professional aspirations [text]	
	[text]	

3.5.5 MONTHLY CE PERFORMANCE REVIEW

Event Name	Event Type	Recurrence	Est. Duration (mins)	Required Output Evidence	Approved Support system	Accountable/ led by	Participants
CE Monthly Performance Review	Meeting (1:1)	Monthly; Weekly (B2B Sales Operations)	45	MPR Form (TOPS template).	TOPS App; BMS; RISE	Supervisors	CEs

Definition: The CE Monthly Performance Review (MPR) process is designed to consistently evaluate and align CE performance with the operational goals. It includes regular assessments, feedback sessions, and leadership commitment to individual development plans.

Purpose: The MPR event is designed to close the loop, provide a clear summary of the status, and ensure alignment between the evaluation of the CE's performance and the set goals. The CE's performance is monitored through daily Feedback Delivery touchpoints, CE Coaching Sessions, and a comprehensive assessment documented in the CEDP.

In addition to ensuring alignment between the Supervisors and the CE, this process includes a joint assessment of KPI performance, setting goals for the next cycle, and identifying improvement and growth.

Guidelines for the Event's Successful Execution - Before the meeting:

- **Review KPI data:** The Supervisor should review the CE's performance data and trends to provide structured feedback on performance.
- **Prepare and/or review the CEDP:** The Supervisor must review and/or update the CEDP to be able to provide structured feedback on improvement opportunities and specific goals for the next month.
- **Review previous activities:** The Supervisor should review the latest follow-up status and previous CE Coaching forms and feedback delivered over the past month to better identify improvement opportunities and establish specific goals for the next month.
- **CEs transitioning to another Supervisor:** The Supervisor should be performing the MPR together with the receiving Supervisor as part of the transition plan.

TOPS Process-Defined Agenda:

1. **Discuss performance:** The Supervisors and the CE must review CE's performance, focusing on the defined program KPIs and areas of focus in line with MAP priorities.
 - How is the CE performing relative to the defined KPI targets (weekly, monthly, and intra-month fluctuations)?
 - What is the CE's quartile and outlier position?
 - How is progress being tracked (evolution over the month, performance in previous months)?
 - Discuss the impact of the CE's performance on the team and the organization
2. **Pipeline management (only applicable for B2B Sales Operations):** Review pitches and commitments received in the previous cycle pending final confirmation. Review planned appointments for the upcoming cycle and identify where support may be needed to finalize confirmation and sales. Lastly, ensure the CE's pipeline is clean, and that all opportunities are within the agreed SLAs per stage.
3. **Provide feedback:** The Supervisor provides feedback to the CE, highlighting positive areas as well as areas that need improvement, including the behaviors identified for improvement in the coaching assessments.
4. **Set goals and commit:** The Supervisor and the CE agree on specific goals for the upcoming period.
5. **Walkthrough of the CEDP:** The Supervisors must walk through EDP with the CE to ensure alignment and identify and define improvement opportunities.

Event Requirements:

- **Responsibility Matrix:**

Event Tasks	Delegable	Roles Authorized for Delegation
Gather evidence to prepare for the session.	☐	Non-delegable, event accountable must create task.
Update evidence in defined TOPS digital system.	☐	Non-delegable, event accountable must create task.

- **Output Evidence:**
 - **Background:** documents the review process, provides tangible evidence of discussions, ensures formality, and facilitates CE transfers to other operations by keeping a consistent record of developmental efforts.
 - **Defined TOPS template:** CE Monthly Performance Review (available in [TOPS Support Documents](#)).

1. Performance Review		
KPI 1 (option to insert up to 4)		Relevant notes
1. KPI name	[drop box with KPIs]	Can only include project-defined KPIs of the program (defined by the OM).
2. Result from the previous month	[numerical]	
3. Actual performance	[numerical]	
4. KPI commitment next 30 days)	[numerical]	
5. Last cycle KPI commitment achieved (filled by Supervisor)	[numerical]	
6. Behaviors to stop	[text]	
7. Behaviors to start	[text]	
8. Behaviors to keep	[text]	
2. Performance Review		
Opportunity 1		Relevant notes
1. Description	[text]	At least 1 Improvement Opportunity loaded, and a maximum of 3.
2. Evidence	[text]	
3. Plan	[text]	
4. CE commitment	[text]	
5. Supervisor commitment	[text]	
6. Number of months the same opportunity is open?	[numerical]	

3.5.6 DAILY SALES HUDDLES (B2B SALES OPERATIONS ONLY)

Event Name	Event Type	Recurrence	Est. Duration (mins)	Required Output Evidence	Approved Support system	Accountable/ led by	Participants
Daily Sales Huddle	Meeting	Daily (only for B2B Sales Operations)	10-15 mins	To be defined by each program	TOPS App; BMS; RISE,	Supervisors	CEs

Definition: A morning sales huddle is designed to motivate the team around shared targets, ensure alignment to performance expectations, and provide the team lead with insight into the day's high-priority activities (helping them focus efforts where needed). The key question that the sales huddle should address is: "Did we have a good or bad day yesterday relative to our targets, and WHY?"

Purpose:

- Review yesterday's performance by asking each CE to share details about the accounts they closed, and budgets signed.
- Set daily targets for each CE (e.g., 3-4 pitches per rep, 1-2 Closed Won opportunities, signed budgets).
- Establish the day's priorities.
- Discuss any pressing issues.
- Gather suggestions and comments from the team.
- Provide urgent updates from management, marketing, etc., that can't wait until the team meeting.
- Inspire and motivate the team for a productive day, allowing them to learn from each other.

Why Huddles Are Important for CEs:

- Opportunity to share successes.
- Chance to ask for help.
- Platform to teach others.

Why Huddles Are Important for Supervisors:

- It's crucial to be part of the team, not just the boss. This is where Supervisors create accountability for themselves in terms of coaching actions and removing roadblocks.

Guidelines for the Event's Successful Execution

- Daily huddles should be scheduled at the start of each day (e.g., 9:00-9:10 AM).
- There is no need to book a room; simply gather around the Sales Board or Screen.
- The huddle should last 10-15 minutes.
- Ensure everyone is actively engaged (no looking at monitors or mobiles, no headphones, etc.).
- Last hour of the day: check in with each Sales Rep (SR) to see if they've met their daily targets by walking around the room and asking each rep individually at their desk.
- Set the right atmosphere for the team each morning: energize CEs, while calming others to balance the mood.

Event Requirements:

- **Responsibility Matrix:**

Event Tasks	Delegable	Roles Authorized for Delegation
Schedule & run daily session in sync WFM indications.	☐	Non-delegable, event accountable must create task.
Review the previous day's performance, set daily targets, and the required actions to achieve those targets.	☐	Non-delegable, event accountable must create task.
Register and document in the TO-DO list (defined TOPS digital system).	☐	Non-delegable, event accountable must create task.

- **Output Evidence:** To be defined by each program. Provided illustrative example below (as guideline not as mandatory output evidence):

POD	Companies Touched		Points Won		Upsells Completed		Top Movers Actions	Big Win of the Day	Manager Follow up Notes
	WTD	Weekly Target	WTD	Weekly Target	WTD	Weekly Target			
1							Company 1 Company 2 Company 3		
2							Company 1 Company 2 Company 3		
3							Company 1 Company 2 Company 3		
4							Company 1 Company 2 Company 3		
5							Company 1 Company 2 Company 3		
6							Company 1 Company 2 Company 3		

3.5.7 WEEKLY TEAM MEETING (B2B SALES OPERATIONS ONLY)

Event Name	Event Type	Recurrence	Est. Duration (mins)	Required Output Evidence	Approved Support system	Accountable/ led by	Participants
Week Team Meeting	Meeting	Weekly (only for B2B Sales Operations)	45 mins	To be defined by each program	TOPS App; BMS; RISE.	Supervisors	CEs

Definition: The weekly sales team meeting is a key event designed to ensure the entire team stays aligned with their performance metrics, fosters ownership of business outcomes, facilitates the sharing of best practices, and enables early identification of any potential issues.

Purpose:

- To review and discuss key performance metrics, ensuring all reps are aligned with their targets.
- To monitor pipeline SLAs and coverage, ensuring consistency and progress.
- To share best practices among team members, creating a collaborative learning environment.
- To identify current challenges or anticipate upcoming issues, addressing them proactively.
- To emphasize weekly priorities, keeping the team focused on immediate objectives.
- To provide updates on important products, projects, or other relevant changes that affect the team.

TOPS Process-Defined Agenda

1. **Review Key Performance Metrics:** Discuss the team's overall performance, highlighting achievements and areas for improvement.
2. **Review Pipeline SLAs and Coverage:** Ensure the pipeline is on track and all opportunities are within the agreed SLAs.
3. **Best Practice Sharing:** Encourage team members to share effective strategies and techniques they've used, fostering a learning culture.
4. **Identify Challenges:** Open the floor for discussion on any challenges the team is facing, or issues on the horizon, and collectively brainstorm solutions.
5. **Emphasize Weekly Priorities:** Ensure the team is clear on the week's focus and objectives.
6. **Important Product/Project Updates:** Provide essential updates that might impact the team's workflow or performance.

Guidelines for the Event's Successful Execution

- **Create and Share an Agenda:** Plan the meeting ahead of time, and share the agenda with all team members, encouraging everyone to contribute.
- **Start with a Team Performance Update:** Begin the meeting by reviewing the team's overall performance.

- **Spot Best Practice Sharing Opportunities:** During 1:1s, identify moments where best practices can be shared, and facilitate the sharing during the team meeting.
- **Encourage Participation:** Create an environment that encourages open discussion and active engagement from all team members.
- **Use the Same Reports as 1:1s:** Ensure the reports used in the weekly meeting align with the ones used in individual 1:1s, maintaining consistency.
- **Invite Your VOL:** Invite your VOL (Vertical Operations Leader) to attend the meeting, allowing them to provide valuable feedback and insights.

Event Requirements:

- **Responsibility Matrix:**

Event Tasks	Delegable	Roles Authorized for Delegation
Schedule session.	☐	Non-delegable, event accountable must create task.
Cover all the objectives defined, following a structured approach with appropriate support materials.	☐	Can be delegated.
Register and document in the TO-DO list (defined TOPS digital system).	☐	Non-delegable, event accountable must create task.
Share minutes / summary with entire team copying direct manager.	☐	Non-delegable, event accountable must create task.

- **Output Evidence:** To be defined by each program.

3.6 Development and Coaching Framework

3.6.1 INTRODUCTION

Definition: As outlined previously, many activities required in TOPS are designed to foster continuous development for CEs, Supervisors, and OAMs. This process begins with observation and progress through feedback, goal setting, coaching, and development planning, with regular checkpoints along the way. Supervisors guide CEs through this process, just as OAMs guide Supervisors, providing the support and resources necessary to encourage growth and improvement.

When all TOPS events work together as intended, they create an effective framework for people and performance development. At the core of these events is the observation of customer interactions, aimed at identifying the most impactful behaviors that can drive performance improvements. Supervisors should aim to observe as many interactions as possible to gather relevant insights.

The Development and Coaching Framework covers all CEs and integrates the following key events:

- Feedback.
- Expert Observation.
- CE Coaching Session.
- CE Development Plan.
- Monthly Performance Review.

3.6.2 BEHAVIOR ROOT CAUSES AND COACHING METHODS

A coach is someone who supports individuals in achieving their goals through goal setting, encouragement, and asking questions, rarely offering direct advice. At TP, the terms Supervisors and OAMs also refer to the Coach. To be an effective coach within the various touchpoints of the TOPS Coaching Framework, Supervisors and OAMs must be able to address the root causes of problems and identify appropriate tools for coaching their teams.

Below is a list of main behavior root causes, how to assess them, and a set of suggested coaching tools.

Identified Root Cause	How to Confirm the Root Cause?	Addressing the Root Cause: Suggested Coaching Tools	METHODS/ APPROACH
Knowledge Gaps	• Knowledge assessment (quiz): Written or online exam done to assess the knowledge of the CE. • Fastball: Quick questions that are made to evaluate the CE's knowledge. • Role play: The Supervisor acts as a customer with a specific scenario. • Self-monitor: Joint monitoring of a registered interaction with the CE. • "5 times Why" to uncover the real root cause.	1. Knowledge transfer session. 2. Training material such as e-learning, webinars, Standard Operational Procedures (SOPs), manuals, etc. 3. Role play: First the Supervisors plays the role of a CE and then the CE mimics. 4. Self-scoring: Upon performing a self-monitor, the CE scores the interaction using the Expert Observation Form. 5. GROW: Coaching discussed goals, aligning with reality as way forward through open-ended question.	1. Mentoring 2. Mentoring 3. Mentoring 4. Counseling
Skill Gaps	• Role play: The Supervisors acts as a customer with a specific scenario. • Self-monitor: As described above. • Side-by-side monitor: The Supervisors confirm that the behavior is caused by a skill gap and not by attitude.	1. Demo Call: The Supervisors handle interaction to demonstrate proper handling and soft skills. 2. Coach Call: The CE and the Supervisors handle interactions together. The Supervisors work actively and guide the CE during the interaction. 3. Model Call: Joint monitoring and discussion of an excellent interaction by a top performer, followed by the respective emulation by the CE. 4. Monits-based comparison: Discuss how the interaction of the CE compares with the one from the top performer. 5. Self-scoring: As described above. 6. GROW: Coaching discussed goals, aligning with reality as way forward through open-ended question.	1. Mentoring 2. Mentoring 3. Mentoring 4. Counseling 5. Counseling 6. Coaching
Low Motivation (doesn't want)	• Role play: The Supervisors acts as a customer with a specific scenario. • Self-monitor: The CE monitors their recorded interactions to get aligned on the identified behavior. • Side-by-side monitor: In case the performance issue does not arise during the side-by-side, this confirms that the issue is caused by a lack of motivation.	1. Analogy: Allows us to relate a work situation with a topic that interests the CE, highlighting the need to change the behavior. 2. Define objectives: Define goals and use them to educate the CE about expectations. These can be KPI, or behavior related. All ROFs must have a SMART goal. 3. Being directive: Detailing the behaviors that must be observed... It is used for serious motivational issues (discuss with superior before using this approach). 4. Encouragement and public acknowledgment of improvement. 5. Self-monitor: An old interaction is compared to a recent one. This should only be done to highlight improvements. 6. Self-scoring: As detailed above. 7. GROW: Coaching discussed goals, aligning with reality as way forward through open-ended question.	1. Consulting 2. Consulting 3. Consulting 4. Mentoring 5. Coaching 6. Counseling 7. Coaching
Environment	• The Supervisors identify an external impact affecting the team. For example, the implementation of a new tool, system outages, or other.	1. This type of coaching is about adapting to the new situation (e.g. becoming familiar with the tool usage) 2. Note that besides the issue related to the environment, there are additional root causes that affect the CE's outlier behavior.	

3.6.3 DEEP DIVE INTO THE GROW COACHING TOOL

The **GROW Model** is a highly effective coaching framework used to help coachees achieve their goals through structured conversations. It guides the coaching process through four key stages: **Goal**, **Reality**, **Options**, and **Will**. By following this model, coaches can ensure a balanced, goal-oriented, and productive coaching session, helping the coachee make meaningful progress.

- **GOAL:** The first stage of the GROW model is focused on helping the coachee clearly articulate a specific and meaningful goal. It's important to understand that the most impactful goal may not surface right away, as the coachee may need time to clarify and refine it. As a coach, your role is to help them dig deeper to uncover the goal's true essence and to define what success would look like.
 - **Key Objectives:**
 - Articulate a clear, specific goal.
 - Understand what success looks like for the coachee.
 - Identify deeper motivations, values, and desires that contribute to the goal.
 - **Sample Questions for Goal Setting:**
 - What topic do you want to discuss?
 - What do you want to achieve from this conversation?
 - What do you want to accomplish?
 - What challenges do you want to overcome?
 - What are your key interests, values, and motivations?
 - How will you know you have succeeded?
 - What does success or achievement look like for you?
 - Where do you want to grow as an individual?
 - What's your vision for yourself this year?
- **REALITY:** The second stage focuses on exploring the coachee's current reality—where they are now in relation to their goal. Understanding the "here and now" allows the coachee to map out the journey ahead. As a coach, it's important to keep the conversation focused and avoid gathering excessive data. Instead, guide the coachee in reflecting on their experiences, actions, and any obstacles they're facing.
 - **Key Objectives:**
 - Understand the coachee's current situation.
 - Identify challenges, past actions, and results.
 - Help the coachee gain objectivity and perspective on their circumstances.
 - **Sample Questions for Exploring Reality:**
 - Where are you now with this topic?
 - What has been happening?
 - What actions have you taken so far?
 - What were the outcomes of those actions?
 - What makes you believe this is the case?
 - What do your peers or colleagues think about it?
 - What obstacles are currently in the way of your success?
 - What resources do you need to achieve your goal?
- **OPTIONS:** The third stage encourages brainstorming possible actions that could move the coachee closer to their goal. This phase is all about exploring different possibilities, so quantity is more important than quality at first. Encourage creativity and allow the coachee to consider all potential solutions before narrowing down their choices. As the coach, you can contribute ideas after the coachee has exhausted theirs, and all suggestions should be considered equally.
 - **Key Objectives:**
 - Generate a wide range of options for moving toward the goal.
 - Encourage creative and out-of-the-box thinking.

- Help the coachee explore different potential solutions
- **Sample Questions for Exploring Options:**
 - If your biggest obstacle wasn't in the way, what would you do?
 - If you had unlimited resources, what would you do?
 - If you could do anything, what might that look like?
 - If you were observing this conversation, what would you recommend?
 - How might you approach this differently?
 - What would your best friend, manager, or peer suggest in this situation?
 - What can you do now to develop skills that will help you achieve your goal?
 - Would you like to hear my ideas?
- **WILL:** The final stage of the GROW model is about turning the discussion into actionable steps. In this phase, the coachee decides on specific actions they will take to achieve their goal. As a coach, you help them determine how to maintain momentum and stay accountable for their actions. This stage is focused on commitment, planning, and moving forward.
 - **Key Objectives:**
 - Define a clear and actionable plan.
 - Commit to specific actions and timelines.
 - Identify potential obstacles and strategies for overcoming them.
 - Establish accountability measures.
 - **Sample Questions for the Will Stage:**
 - What is the one thing you can do tomorrow to move toward your goal?
 - On a scale of 1-10, how committed are you to doing this? (If 6 or below, ask what would bring them to an 8-10.)
 - What obstacles could arise? How will you overcome them?
 - When will you start?
 - How will we know when the goal has been achieved?
 - Who can you ask for feedback after taking action?
 - What is your next step, and when will you take it?
 - How can I support you further in your development?

By following the **GROW Model**, you can ensure a structured, goal-driven approach to coaching that helps the coachee set clear objectives, explore their current situation, brainstorm possible solutions, and create a concrete action plan. It's a powerful framework that provides clarity, direction, and accountability, empowering the coachee to take ownership of their growth and progress.

3.6.4 MEASURING COACHING SUCCESS

Measuring the success of coaching is crucial for Supervisors and OAMs to ensure their efforts effectively drive performance and development. The following four elements outline key areas to evaluate coaching success, providing a framework for continuous improvement. These questions should be on the top of mind for Supervisors and OAMs in their daily routines.

Coaching Intensity:

- **Question to Answer:** What percentage of the Supervisors' time is spent on coaching and mentoring activities?
- **How to Do It:** Make random observations of what activities Supervisors are performing at a given moment. Use this sample to estimate the percentage of time Supervisors spend with CE.
- **Expectation of Success:** at least one coach per week for new hires and outliers, and a minimum of one per month for the remaining CEs. Supervisors should prioritize coaching sessions during times when other tasks or responsibilities are less demanding.

Coaching Coverage:

- **Question to Answer:** What is the percentage of CE receiving coaching in any given period?

- **How to Do It:** Regularly survey the CE on what was the last time they had at least a 20-minutes session with the Supervisors.
- **Expectation of Success:** a minimum of 1 coaching session per CE per month.

Coaching Satisfaction

- **Question to Answer:** How satisfied is the CE with the coaching session, and to what extent do they perceive it valuable?
- **How to Do It:** Measure CE satisfaction with coaching through surveys and feedback sessions using a Net Promoter Score scale.
- **Expectation of Success:** Perform benchmarks and comparisons between tenured and non-tenured supervisors, as well as with other programs within your country and region.

Coaching Effectiveness

- **Question to Answer:** What is the impact on performance, and the business?
- **How to Do It:** Measure the progress of the negative outliers towards the average of the group and the progress of the average of the group towards the defined objective.
- **Expectation of Success:** Progress according to the pre-established glide path and reduction of the deviations within the group of CE (objective being a VSF below 0,7).

3.6.5 COACHING INTENSITY SURVEY

Background: Coaching is the cornerstone of TOPS and is vital for supporting people. To ensure the continuous measurement of Supervisors' time (and the quality of that time) spent with CEs, all subsidiaries will be required to rollout the Global Coaching Intensity Survey.

Methodology:

1. A global survey will be available to capture the voice of CEs regarding the coaching program.
2. The surveys will be sent out to all CEs via MyTP every month.
3. Only one answer per CE is accepted by the survey tool.
4. Coaching Health Report: the outcome of the survey process will be available on [PHAROS](#) providing overview at subsidiary, and client and manager level.

Coaching Intensity & Coverage: When was the last time your Supervisor spent at least 20 minutes with you?

1. This week.
2. More than one week ago.
3. Between 2 to 4 weeks ago.
4. 1 month ago.
5. More than one month ago.
6. Never.
7. Do not know/cannot remember.

Coaching Satisfaction: On a scale of 0-10, how relevant and helpful was the session in aiding your development and improving your performance?

- 0 = Not at all likely.
- 10 = Extremely likely.

3.7 Outlier Management Framework

3.7.1 INTRODUCTION

The Outlier Management Framework must be implemented in every operation to support systematic efforts to reduce the variance of performance within the group of CEs and promote consistent delivery.

The existence of such a framework allows OAM to continuously monitor and drive Supervisors' coaching efforts, especially when the variance in a KPI or group of KPIs for a given group of CEs with similar tenure is high. This framework should be regarded as a crucial operational element for daily management and, therefore, must be implemented across all operations meetings by aligning the reporting packages.

In Outlier Management, as part of TOPS practice, operations must use the Variations Significance Factor (VSF) approach over the quartile approach for outlier management. The VSF approach aligns with Six Sigma principles, as it provides a more nuanced understanding of variability.

3.7.2 PROCESS DESCRIPTION

For the successful implementation of the Outlier Management Framework, the operation must adhere to the following steps:

1. **Framework deployment:** The OAM is responsible for collaborating with the Business Intelligence team to develop and maintain the defined reporting to support the outlier management framework. The reporting pack should be utilized in various meetings. In these meetings, the VSF and histogram representations of team performance are consistently used as key discussion points.
2. **Train Supervisors:** Ensure Supervisors are trained and able to apply the Outlier Management Framework. This training should cover the purpose, structure, and key components of the framework, how to use VSF, and reduce variability among CEs.
3. **Identify the Outliers and VSF interpretation:** Supervisor must identify outlier to be addressed. It is important to remember that a single behavior can cause the same CE to be an outlier across various KPIs. Outliers must be included in the MAP agreed upon between Supervisors and OAM.

VSF VALUE	ISSUE	APPROACH
Above 1.0	Outlier Management	The significant performance variation indicates a need for an outlier management initiative to enhance overall results. The OAM is responsible for identifying outliers, while the Supervisor applies appropriate methods to improve their performance (outlier management). However, if there is prolonged performance variation despite clear efforts to improve CE' performance, initiating an LSS project should be considered.
Between 0.7 - 1.0	Combined Approach	While the opportunity to enhance performance through outlier management remains, please note that this endeavor might come secondary to other ongoing efforts. A clear indication for both outlier management and process level improvements.
Below 0.7	Identify process level driver	If you are not meeting the target, and the VSF is lower than 0.7, outlier management will not generate significant improvements. The OAM should work with quality for further actions regarding process optimization.

Note: When analyzing variability (or variance), it's not very relevant to include both tenured and new hires in the same group. Instead, calculate the VSF separately for tenured representatives and new hires. It only makes sense to discuss outliers within the tenured population or the newly hired population.

4. **Identifying the Root Cause for each Outlier:** The Supervisors must run an adequate behavior assessment using the CE Coaching form to identify the root cause. The OAM is required to review and discuss the identified root causes during the Mid-month Supervisor Development and MAP review session.

5. **Follow up and review process:** Supervisors must conduct coaching sessions and agree on improvements with CEs, ensuring these are reflected in the coaching execution and in the CEDP. The OAM must walk through, review, and sign off on the CEDP as part of the Mid-month review with Supervisors.
6. **Outlier Success Measure:** An outlier is no longer considered an outlier when their performance falls within 1 standard deviation from the mean performance meeting the team average. Performance should be tracked for 4 to 6 weeks to confirm improvement.

Additional guidelines:

- **Outlier identification:** In the context of a histogram, outliers are CEs that perform at the sides of the histogram. In statistical terms, a CE is considered an outlier in a given KPI when the respective performance lies outside the first standard deviation of the performance of the whole team, in six sigma terms, we would then say that the outliers are 1 sigma from the mean of the population. The outliers are positive or negative. *Refer to [LSS](#) for additional training and enablement support.*
- **Positive Outliers:** Positive outliers show a performance well above the average, so the Supervisors should take advantage of the CE Coaching Session to praise and learn. Their best practices should be replicated with the other CEs.
 - Note: unfortunately, in rare situations, they could also have found a way of manipulating the system – so attention must be given to that eventual possibility.
- **Repeat Fail:** In the absence of sufficient data, we track repeat fails as a way to identify outliers. Repeat fails are CEs who consistently make the same error, such as those with the highest number of non-satisfied customers.

3.7.3 STRATEGIC SEATING

The physical seating arrangement should be strategically planned to position outliers and CEs with the highest priorities in close proximity. This facilitates easier observation, support, and engagement. In a physical office environment, this can be implemented simply by placing key team members within close range. For virtual settings, however, there are alternative strategies to achieve a similar effect. For example, pinning CEs in MS Teams keeps their messages at the top of the channel,

and creating dedicated channels for specific groups helps ensure that high-priority individuals or teams are easily accessible and visible.

This approach not only streamlines communication but also ensures that people who need more attention or support are closely monitored and supported in real time. Whether in-person or virtual, strategic seating can enhance the flow of information and provide a foundation for more targeted interventions.

3.8 Top Contact Drivers (TCD)

3.8.1 INTRODUCTION

Definition: TCD refers to the most common reasons customers interact with a company. By identifying these drivers, we can better understand how to improve service efficiency and enhance overall customer satisfaction.

Analyzing TCD goes beyond just knowing why customers reach out; it involves evaluating performance based on these reasons to identify areas and processes that need attention. This helps us detect performance shifts due to changes in contact reasons, allowing us to proactively tailor training and coaching activities to address emerging needs. TCD Analysis is essential for boosting operational efficiency and performance, following the Pareto Principle, which suggests that 80% of performance is influenced by 20% of the factors.

By identifying the top drivers, TCD enables a focused approach to performance improvement, training, and coaching, concentrating on the most impactful factors. This strategy leads to significant improvements in key performance indicators, customer satisfaction, and resolution rates.

3.8.2 LEVERAGING TCD ANALYSIS

Various views and analyses are defined in [BEST QM](#) and [BEST BI](#) and documented below in the section **Error! Reference source not found.** detailing how the analysis should be made available, below is how it should be used in the day-to-day operations rhythm.

Coaching:

1. The TCD should be used to support coaching activities. Ensure that CEs are ready to handle the TCD and are equipped with rebuttals and strategies to address the most frequent questions and doubts. Supervisors are expected to base their coaching activities on the TCD, especially for sessions directed at new hires.
2. Before conducting a coaching session, Supervisors must use TCD to identify which customer interaction drivers are most impacting the CE's performance and require behavioral corrections.
3. By identifying the TCD, Supervisors can tailor coaching sessions to address specific behaviors or skills that directly impact these key drivers. This targeted approach ensures that coaching is more effective, aligning the CE's development with the areas that most influence performance, customer satisfaction, and operational efficiency.

Outliers by Contact Drivers:

4. VSF analysis is expected to be run at the contact driver level for each KPI (as applicable) to better identify the stability of the contact drivers with high variance.
5. When defining outliers, contact drivers should be considered in the analysis to fine-tune the actions. Outlier performance might be limited to specific contact drivers, indicating specific gaps or a higher impact driven by the fact that the CE is handling a specific call type (for example outlier AHT handling billing requests vs. inquiries).

Defining KPI Targets per Contact Drivers:

6. The OM is expected to define targets for the KPIs at the contact driver level to guide and support OAM efforts in the MAP plans with Supervisors, ensuring proper cascading from Supervisors to CEs.

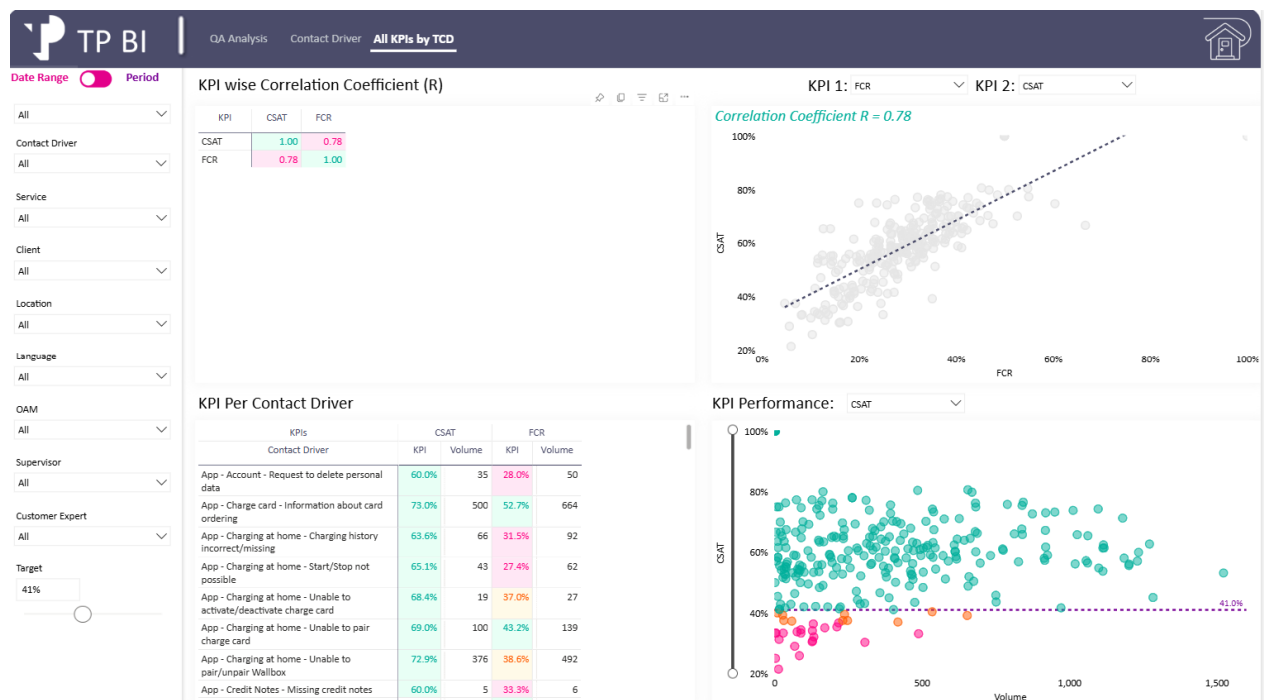

Change Analysis:

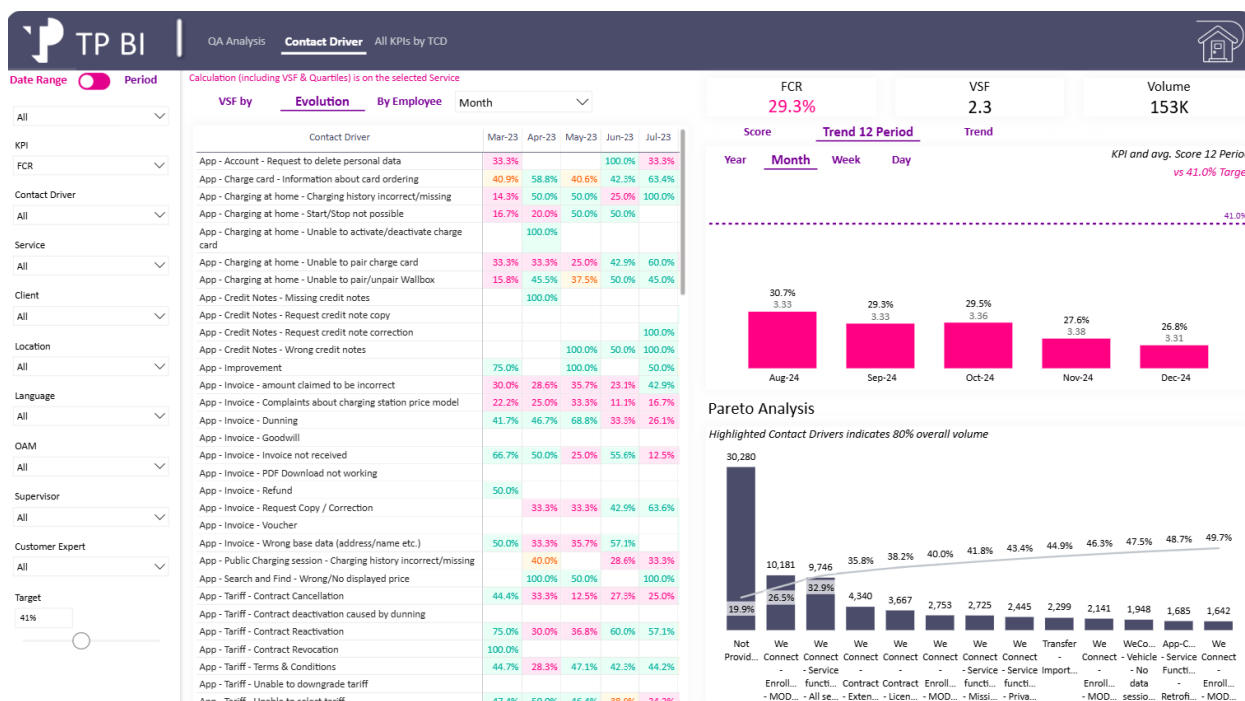

7. Change Analysis assesses if the change in performance (negative or positive) is driven by a volume change. This Analysis is required by BEST QM and must be discussed during the M3 meeting.
8. The OM must leverage this analysis to extend visibility and educate the client on the impact on performance.
9. The OAM is required to leverage the knowledge of performance by contact driver to plan for seasonality changes and build the necessary mitigation plan. For example, during Christmas, follow-up on delayed orders is expected to grow by 20%, and this contact driver is known to have 10% higher AHT.

Understanding Impact: Defining Contact Driver Priorities

10. Many of our client platforms allow us to set priorities for interactions based on the IVR selection or request type. By understanding the impact of each contact reason and the performance of CEs, the OAM should leverage this knowledge to tailor call assignments and priorities to maximize performance and allow new hires to build experience.
11. This metric should be included in the operations reporting to describe the impact of each CE compared to targets. It can be calculated at any level of each element's total deviation, weighted by the interactions handled by each element (e.g., CE, Supervisor, others).

TCD Analysis – BEST BI Visual Example:

Note: refer to [BEST BI](#) for full reporting visualization details.

3.9 New Hire Path to Proficiency

3.9.1 INTRODUCTION

Definition: The New Hire Path to Proficiency is a structured process designed to help CEs transition from training and nesting into achieving operational targets.

Purpose: This process aims to ensure that new hires achieve success and meet KPI targets as soon as possible and, in any case, in accordance with the pre-established learning curve objectives and are provided with proper welcoming. It focuses on the learning curve of new hires, providing them with the necessary tools, knowledge, and support needed to excel in their roles, reach target performance, and contribute to overall team success.

Methodology: Based on the historical learning curve and the lessons learned from the beginning of the project, the OM must define the weekly target for new hires who are arriving. This decision is made by the OM in collaboration with the OAMs, Training and Quality Leaders. The target learning curve, which must be both ambitious and realistic, is defined as the weekly step goal for new hires until meeting targets.

As preparation for new hires joining operation, the overall impact should be discussed with the OM and communicated with the client – if needed.

Typically, the target learning curve guides new hires to reach adequate proficiency within three months of production:

1st Month: Achieve a KPI score of at least X%.

2nd Month: Increase the KPI score to X%.

3rd Month: Reach the target KPI of X%, aligning with the client's expectations.

3.9.2 PROCESS DESCRIPTION

New hires need structured support to achieve proficiency and meet performance expectations. This includes defined monthly goals that progressively build skills and align with the client's KPI targets. To achieve this, the following requirements should be followed:

1. **Management introduction:** During the classroom training, all the trainees must be informed about who will be their new Supervisor. The Supervisor should join the class to introduce themselves as the new manager, explain the commission model (if exists), KPIs, expected targets, and explain how the nesting period will be conducted.
2. **Nesting:** The nesting period is a joint responsibility between operations and training. The trainer of a trainee class will spend the first production week in the production environment dedicated to coaching and supporting the class, together with the assigned Supervisors. During the first week of production, the new hires will therefore have two dedicated resources to support them. Refer to [BEST T&D](#) for more details.
3. **Welcome to the team:** The Supervisors must host a 30-minute One-on-one to welcome each new team member with the following high-level agenda:
 - Getting to know the new team member.
 - Explaining the KPI, expected KPI and productivity targets, and how they will be able to achieve them.
 - How will the Supervisors help meet your objectives?
 - How to get support.

This session can be seen as the first MPR for the new hires.
4. **Skill Transfer Session** is a structured training method in which a Supervisor shares knowledge and skills with a new hire. The Supervisor assigned to the new hire should provide feedback on the evaluation and conduct the skill transfer session. This process involves five key steps:
 - **Explain:** Supervisor clearly describe the task, its purpose, and the expected outcome.
 - **Demonstrate:** Supervisor show how to perform the task, often breaking it down into manageable parts.
 - **Practice with Coaching:** The new hire attempts the task under the Supervisors' guidance. The Supervisor provide real-time coaching and correction as needed.
 - **Observe:** Supervisor watches the new hire perform the task independently, noting any areas that need improvement.
 - **Feedback and Accountability:** Supervisor provide constructive feedback on the new hire's performance and hold them accountable for improving in areas of weakness.
5. **Set Learning Curve Targets:** To help new hires succeed, it's essential to provide clear targets that define success. When defining the learning curve (or glide path), follow these steps:
 - **Define Success and the Starting Point:** Begin by clarifying the performance expectations for new hires. Assess the initial performance level of CEs right after training to understand where they're starting and to evaluate the effectiveness of their training.
 - **Set Peak Performance Goals:** Identify the point where performance is expected to stabilize at the highest level and confirm that this level meets the target.
 - **Estimate the Time to Reach Peak Performance:** Determine the number of interactions or timeframe required to achieve the target level, ensuring this timeline is realistic.
 - **Establish Weekly or Monthly Milestones:** Based on the initial starting point, set specific goals for the first week of performance and ongoing milestones to help track steady progress toward peak performance.
 - **Review and Adjust:** Regularly compare actual performance against the target. Identify areas for improvement and adjust the learning curve timeline if needed, keeping in mind that the path to proficiency may vary based on metrics and business expectations.
6. **Coaching frequency:** New hires are expected to get more attention to help them gain the right behaviors and skills. At minimum three coaching sessions per month (weekly as target but assumed 3 for compliance purposes as assumed 3 weeks and one week with MPR), including 1 side-by-side and a skill transfer session.

New Hire Path to Proficiency – BI Visual Example:

Note: Refer to [BEST QM](#) for additional details about the New Hire Path to Proficiency and Learning Curve.

3.10 Knowledge and Skill Management

3.10.1 MONTHLY VERIFICATION SKILLS (MSV)

Definition: A monthly recurring process led by the Training department in collaboration with Quality and Operations. It is designed to identify knowledge and skill gaps among CEs, Supervisors, OAMs, Trainers, and Quality teams by administering a quiz focused on specific customer handling and process-related topics. This process supports targeted learning interventions and ensures alignment with operational goals and performance standards.

Purpose: Knowledge and Skill Management is a key pillar in ensuring team success. It is essential to verify that operational teams possess the necessary knowledge and skills to deliver business results while ensuring CEs maintain the required level of expertise.

Guidelines for the Event's Successful Execution:

The OAM is responsible for guiding the training team in identifying areas of focus for Monthly Skill Verification (MSV) to uncover knowledge and skills gaps and implement targeted learning interventions.

This is done by analyzing knowledge gaps and recurring questions from CEs, followed by appropriate actions, such as:

- Repetitive Questions: If certain questions repeatedly arise, it may indicate a need to review and update training materials.
- CEs with the Most Questions: If some CEs are asking more questions than others, they may be lacking skills or confidence. The team can then determine the best way to support them.
- Time to Support: Track the time it takes to assist CEs, with the goal of reducing this time to improve efficiency.

Event Requirements: At least 80% monthly participation across the entire team and all roles, with new MSV issued each month.

For additional details about MSV process please refer to [BEST T&D](#).

3.10.2 RECOMMENDED TOOLS TO SUPPORT KNOWLEDGE MANAGEMENT

Raised Hand

Included in TP Protect, it is a feature designed to track and analyze all questions from CEs. It ensures that all inquiries are addressed and used to improve the overall knowledge and skill management process. In addition, the OAM must check the Raised Hand reports, analyze the support waiting time, and ensure that CEs get support when needed. Note that waiting long for support undermines the commitment and motivation of the CEs. The solution can be applied for both Remote work (CC) and B&M. It brings the following features:

- **Dates and time:** TP Raise Hand collects date and timestamps throughout the entire process to provide information about how long it takes for Supervisors to acknowledge raised hands and how long the support sessions take.
- **Categories and subcategories:** TP Raise Hand captures data about the types of support requests that are being made and who is making the requests. Operational teams can gain insight into pain points for the team and can find ways to improve processes, training, and knowledge sharing.
- **Dispositions:** After providing support the Supervisors, select the outcome. This provides data about follow-up that may be needed and if a resolution is reached.

How does TP Protect Raised Hand work?

Representative

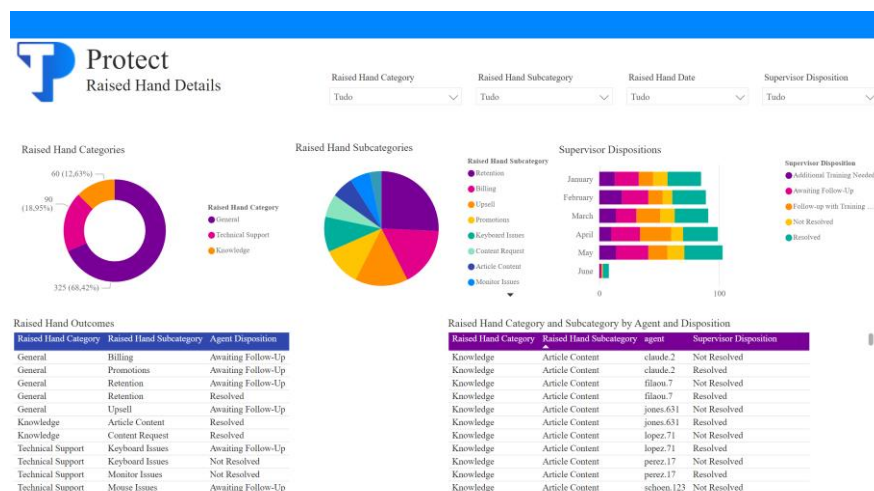

- TP Agent is installed on the Representative' machines.
- A Representative can digitally raise their hand, indicating a need for assistance, using the raised hand window.
- Representative can select categories and subcategories to provide insight on the type of support that they need.
- Representative can lower their hand at any time.
- Representatives will select a disposition or outcome of the support session.

OAM / Supervisor Experience

- Using the TP Protect Website, Supervisors can give immediate feedback to let experts know help is on the way.
- In the map view, the halo around the desk grows in 30 second intervals, until reaching a maximum size, helping supervisors identify who has been waiting the longest for support.
- In the list view, requests can be sorted by time in state.
- The Raised Hand icon will stay **red** until it is acknowledged by a supervisor, at which time it will appear **green** until a final disposition is selected.
- Managers/Supervisors will select a disposition or outcome of the support session.

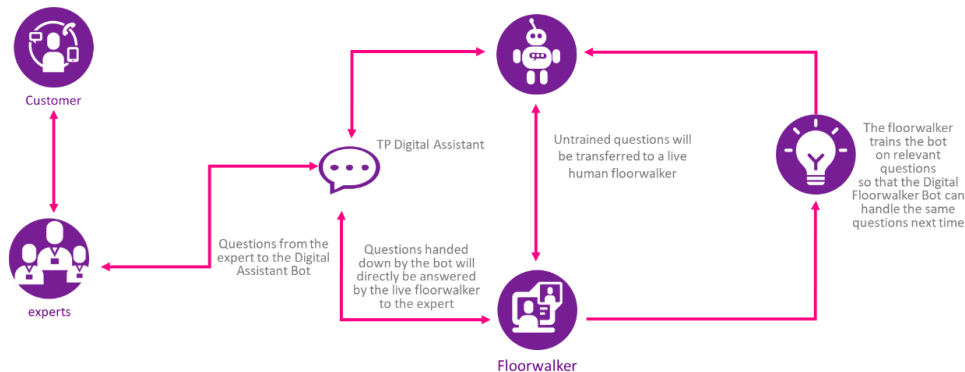

Top assist driver per CE and Supervisor

Data about the types of requests, final dispositions, and handle times are available to help with KPIs, to indicate possible training opportunities and track support efficiency.

Digital floorwalker

The Digital Floorwalker is TP's internal CE-facing bot solution that helps CEs get real-time support with a conversational knowledge base.

Success Measure:

The success of this process is measured by the improvement in the knowledge and skills of the CEs, the reduction in repetitive questions, and decrease in support time. The goal is to enhance the performance of the team and align it with operational goals.

3.11 TOPS Problem-Solving Process (PSP) and Lean Six Sigma (LSS)

3.11.1 INTRODUCTION

This section highlights the use of LSS in the TOPS, particularly through the PSP. PSP applies the DMAIC methodology (Define-Measure-Analyze-Improve-Control) to resolve challenges and approach problems from new perspectives. By identifying performance or process defects (client-related or internal) using DMAIC, it facilitates effective solutions.

The OM is responsible for determining when to launch a PSP that addresses operational responsibilities and its execution. If the PSP does not resolve the gap, the OM must seek support from the Local, Regional, or Global Six Sigma teams for a deeper LSS intervention.

3.11.2 LSS TRIGGERS

LSS projects enhance performance by addressing process inefficiencies through a structured approach. To launch them effectively, specific triggers—proactive and reactive—indicate when LSS intervention is needed.

Upfront triggers typically initiate a PSP, but the OM may bypass PSP based on the challenge's complexity and seek immediate support for a more advanced LSS approach. Hence, this section is titled "LSS Triggers," not just "PSP Triggers."

- **Proactive triggers:** Anticipate and resolve issues aligned with client priorities before performance is affected.
- **Reactive triggers:** Address urgent concerns, such as client escalations or competitive underperformance.

This chapter details these triggers, their activation conditions, and their role in driving sustained improvements and meeting client satisfaction goals.

Proactive Triggers:

1. **Performance:** Initiate an LSS project to improve processes or tools (client/internal). Time periods (WoW or MoM) depend on the business lifecycle. For MoM evaluations, at least four months of performance data are needed to trigger LSS, if the following conditions are met:

- a) If KPIs are not met, and the VSF is below 0.7 for ¾ of the considered period (demonstrates uniformity on performance across CEs and typically stable processes), outlier management alone is unlikely to drive significant improvements.
 - b) If the VSF is greater than 0.7 for ¾ of the periods, including at least one of the last three periods (demonstrates opportunity to improve performance across CEs and typically process instability), regardless of whether KPIs are being met, consider streamlining processes alongside outlier management to align CE performance more closely.
2. **Client Priorities from Key Sources:** When client priorities arise from sources like CES, QBRs, new product launches, or quality observations, proactive LSS action is needed to align with their focus. For instance, if reducing churn is a goal, an LSS project can support this. Confirm the priority with the client before starting the LSS project. This trigger allows LSS to address non-primary KPIs when relevant.
 3. **Customer Feedback or Complaints Linked to Key Outcomes:** If negative feedback points to process inefficiencies, an LSS project may be initiated, even if primary KPIs aren't impacted yet. This proactive approach helps improve customer loyalty before critical KPIs are affected.

Reactive Triggers:

4. **Client Escalations or Hot List Status:** Trigger an LSS project if there are client escalations or if the client is listed on the Hot List to address these issues promptly.
5. **Underperformance vs. Competitors:** For shared business or LOBs, if stack ranking is low for ¾ of the periods (not necessarily consecutive), initiate an LSS project. Time periods depend on the business lifecycle (WoW or MoM). For MoM, at least four months of performance data are required.

3.11.3 GOVERNANCE, ROLES & RESPONSIBILITIES

- **Initial Decision:** The OM evaluates triggers and decides whether to initiate a PSP or LSS intervention.
- **Project Ownership:** Once an initiative is approved, a Project Leader—typically a Quality Manager, OAM, OM, or PEX Leader (mainly for LSS)—is assigned to investigate, understand, and resolve the issue.
- **Mentor Support:** The Project Leader is guided by a Mentor (usually an OAM or LSS Mentor) to analyze data, identify root causes, and implement corrective actions, ensuring proper use of the LSS DMAIC cycle and tools.
- **Project Priority & Governance:** Each country must establish governance to define LSS project priorities and review statuses, with the CTO or a designated Senior Executive accountable for local oversight.
- **Operational Follow-Up:** LSS initiatives must be reviewed and their status updated during M3 meetings at the operational level. LSS initiatives must be discussed, and their status must be provided during the M3 meeting.

Note: for more details about LSS in operations please refer to [LSS Sharepoint](#).

3.11.4 PSP PROCESS DESCRIPTION

To track PSP progress, a standardized template is available for all staff. It includes instructions and guidance to support the DMAIC problem-solving approach and covers: methodology, step-by-step DMAIC details, and related instructions.

1. **Define:** Helps to clearly articulate the problem, goal, potential resources, scope and high-level timeline.
2. **Measure:** Guides the team (Mentor & Project Leader) to decide on what needs to be measured and how to measure it, such as main KPI and additional metrics or observables.
3. **Analyze:** Use the data obtained in the measure phase and other assumptions to identify the potential drivers and ultimately validate and select root causes of the problem to be fixed. It will guide in listing and prioritizing potential causes of the problem.
4. **Improve:** The Project Leader will define improvement actions based on the root causes identified by the analysis.
5. **Control:** Create a control plan to ensure the changes made are effective and sustainable. Such as updating documents, client process and/or training records as may be required.
6. **Control – Chart Data:** Is a collection of data to help create the charts Control tab (like raw data).

TOPS requires, for compliance purposes, that:

1. PSPs are created based on defined triggers or when evidence demonstrates the need for additional support, which may be requested from PEX or Transformation teams to enable a more immersive LLS initiative.
2. Operations managing PSPs must use the template defined by the LLS community or a similar format that complies with PSP process execution requirements.
3. Please find the PSP process application document and template editable document in [TOPS SharePoint](#).

4 GOVERNANCE

This chapter provides a comprehensive overview of the governance structure within the TOPS framework, delineates the roles and responsibilities, introducing key teams such as Flex and Elite Team, and emphasizes the critical KPIs required for managing operational performance. Additionally, it offers guidelines for effective communication within the TOPS and BEST frameworks, ensuring that every role is clearly defined and aligned with the organizational objectives.

4.1 Roles and Responsibilities

TOPS Operating model framework defines the roles and responsibilities and their distinctive responsibilities. The table below provides a high-level summary of the key focus areas for roles within the operational organization. It should not be interpreted as a job description.

Role	Focus
Supervisors	- Lead a team of CEs: - Either Cloud Campus, or B&M. - With an indicative team size of 15-18. - Develop behavior and coach. - Observe customer interactions. - Fill in the CE Coaching form. - Perform Coaching Sessions & follow-up. - Conduct CE Observation & Feedback sessions. - Conduct Monthly Performance Review. - Ensure New Hire success (develop skills, product and systems knowledge). - Conduct knowledge transfer sessions (during the new hire process). - Handle real-time floor support for challenging customer interactions and complaints (escalations). - Participate in Calibrations and client meetings with operations management.
OAM – Operations Assistant Manager	- Lead a team of 5~7 Supervisors (indicative ratio). - Secure deployment and rollout of Outlier Management Process. - Identify CEs outliers through the Outlier Identification Process. - Define priorities for Supervisors' Evaluation and Coaching. - Coach the Supervisors. - Support Supervisors and Quality Analyst. - Manage performance for the Supervisors. - Conduct daily Supervisors meetings. - Conduct one-on-one meetings with the Supervisors. - Review KPIs and performance. - Review client tool updates and inform the team. - Account for the Monthly Action Plan. - Take responsibility for the quarterly self-evaluation TOPS certification process. - Participate in client meetings as required.
OM – Operations Manager	- Secure teams are trained on TOPS and in the respective TOPS Digital Support System. - Ensure SOW compliance and KPI goals. - Manage the daily, weekly, and monthly Gross Margin. - Develop annual operating budgets. - Conduct performance management for OAM. - Account for PSP and LSS initiation and success. - Provide the client with confidence in operational corrective actions. - Participate in client meetings as required. - Manage Staffing and Recruitment Requests. - Take responsibility for added-value initiatives. - Must be certified and trained in Green Belt within 12 to 18 months of starting the role.

4.2 Absence and team coverage policies

It is the responsibility of the individual and their manager to plan for any absences. This planning should involve identifying who will assume accountabilities for all relevant TOPS tasks during the absence. This may include assigning a temporary leader for the full team's responsibilities or designating specific team members to handle individual tasks. Clear delegation ensures continuity and maintains the quality of deliverables, even when key personnel are unavailable.

TOPS considers a broader timeframe beyond monthly frequency, as holidays, absenteeism, and other factors affecting CEs may not align with their Supervisors, OAM and OM schedule. Consequently, TOPS recognizes variations over the months in the execution of all the events.

4.3 Introduction to Flex and Elite Team Concepts

Definition: This is a practice used and tested across several operations that proposes the formation of highly skilled, dedicated CE teams to accommodate business seasonality. While it has the potential to boost performance when properly implemented, it is not a mandatory TOPS practice.

- **Elite Team:** Comprising approximately 30% of the CEs, this team aims to achieve 130% of the KPIs target. They specialize in specific interaction types and receive enhanced incentives.
- **Flex Teams:** These teams consist of CEs with specialized skills who can be deployed to support various teams based on operational needs and rotate between skills.

Purpose: The primary objective of this practice is to enhance overall productivity, quality, and employee satisfaction. This is achieved by focusing on KPIs, fostering specialization, providing flexible work arrangements, and implementing a performance-based incentive program.

The Elite Teams concept recognizes employees who consistently achieve superior performance by offering them the opportunity to work overtime with additional incentives. To implement this practice effectively, it's essential to align the incentive model with the billing model.

For example, if our billing model is based on tickets and we establish a 40% gross margin for handling 5 tickets per hour, but high-performing CE handle 10 tickets per hour, they can achieve an 80% gross margin. In this scenario, we can offer an extra bonus per ticket, enhancing their earnings. Instead of retaining all the profit from the 80% margin, we distribute additional incentives where the gross margin is 50%, creating a win-win situation for employees, the company, and clients.

This approach ensures that highly skilled and seasonal employees are motivated and available during peak demands, securing optimal performance and satisfaction for our clients. Elite teams are about establishing an incentivized system to handle higher volumes, which boosts overall operational performance. It is important to protect our teams from burnout due to workload and to create a work environment where top performers are motivated to contribute more. This approach fosters a healthy environment for our staff and maximizes our performance.

Implementation Guidelines:

1. **Performance Metrics and Incentives:** Identify the three KPIs with the most significant impact on the client scorecard. Establish an incentive structure that rewards high performance and encourages continuous improvement. Recommended Incentive Structure:
 - a. **Elite Teams**
 - i. Earn a 20% variable incentive base.
 - ii. Incentive doubles for each level of performance attainment (team, line of business, operation).
 - iii. CEs can rotate into Elite Teams every 30 days based on performance.
 - b. **Flex Teams:**
 - i. Receive specialized compensation and flexible schedules.
 - ii. Eligibility is based on expertise in specific contact types and performance metrics.
 - c. **Supervisors:**
 - i. Earn a 5% variable incentive base.

- ii. Incentive doubles for each level of performance attainment (Supervisors, line of business, operation).
 - iii. Qualify as an Elite Supervisor when at least 50% of their CEs are in Elite or Flex teams.
- 2. **Performance Evaluation and Development:** Identify the candidates for the program and the development plan.
- 3. **Elite Team Selection:** CE demonstrates expertise in a specific contact type by achieving 130% on relevant KPIs for a designated period.
- 4. **Flex Team Development:** High-performing Elite Team members can transition to Flex roles based on skill set and business needs.
- 5. **Skill Development:** Continuous training and development opportunities are provided to enhance CE capabilities.

Expected Outcomes:

- Improved overall performance through specialized focus and enhanced incentives.
- Increased employee satisfaction through flexible work arrangements and career development opportunities.
- Enhanced customer experience through increased CE expertise and efficiency.

4.4 TOPS KPI

Below outlines the KPIs essential for managing and optimizing operations performance. The OM is responsible for defining the right KPI for the operation and ensuring each KPI category is represented.

4.4.1 SERVICE KPIS

What: Service KPIs measure the responsiveness and availability of the operation in handling customer interactions. They focus on the speed and efficiency of answering interactions and managing customer inquiries.

Why: These KPIs are crucial for maintaining high levels of customer satisfaction and minimizing the waiting times that can lead to customer frustration and abandonment.

Examples:

- **SL:** Measures the proportion of interactions that are handled before a given time interval (30 seconds for example).
- **ASA:** Measures how quickly interactions are answered.
- **Abandonment Rate:** The percentage of interactions that are abandoned before being handled.
- **Average Response Time:** The time taken to respond to chat inquiries.
- **Escalation Rate:** The percentage of transactions escalated to another team.
- **Take-Up or Deflection Rate:** Measures the proportion of chats taken up by CEs or deflected to self-service options.

4.4.2 QUALITY KPIS

What: Quality KPIs assess the accuracy, effectiveness, and compliance of interactions handled by the call center. They ensure that customer issues are resolved correctly and efficiently.

Why: Maintaining high-quality interactions is essential for customer trust, business operations, and regulatory compliance.

Examples

- **Escalation Accuracy:** Accuracy of escalated transactions being handled correctly.

- **Customer/Business/Compliance Critical Error Accuracy:** Measures the rate of errors affecting customers, business, or compliance.
- **First Contact Resolution (FCR):** Percentage of issues resolved on the first contact.

4.4.3 SALES KPIS

What: Sales KPIs measure the performance of the revenue-generating activities. They focus on conversion rates, revenue generation, and the effectiveness of sales efforts.

Why: These KPIs are important for tracking the financial performance and efficiency of the sales operations.

Examples

- **Sales/Revenue:** Total sales or revenue generated.
- **Conversion Rate:** The percentage of interactions that result in a sale.
- **Conversion Volume:** The total number of sales conversions.

4.4.4 EFFICIENCY KPIS

What: These KPIs measure how efficiently the call center utilizes its resources, including human resources time and system capabilities. They focus on productivity and operational efficiency.

Why: Optimizing efficiency helps in reducing operational costs while maintaining high levels of service quality.

Examples

- **Average Handle Time (AHT):** The average time taken to handle a transaction.
- **Concurrency:** The average number of simultaneous chats handled by a CE.
- **CE Utilization:** The number of production hours (transaction hours + available hours) compared to present hours (production hours + in-office shrinkage hours).
- **CE Occupancy:** The number of transaction hours (handled volume * AHT) compared to production hours (transaction hours + available hours).

4.4.5 PEOPLE KPIS

What: People KPIs track the human resource aspects of the operation, including attrition and absenteeism rates. They focus on workforce stability and availability.

Why: These KPIs help in managing and retaining talent, reducing turnover costs, and ensuring that enough staff are available to handle customer interactions. In addition, they are an excellent proxy for staff engagement and motivation and constitute therefore a very good predictor of near-future performance.

Examples

- **CE attrition:** The number of CEs leaving divided by the total number of active CEs over a defined period.
- **CE absenteeism:** The percentage of CEs that have not been logged into the system (absent) versus the CEs that have been scheduled and are expecting to be logged in.

4.4.6 CUSTOMER EXPERIENCE KPIS

What: Customer Experience KPIs measure satisfaction and the level of effort required by customers when accessing customer service. They focus on the overall customer experience and how well it is perceived.

Why: Improving customer experience is crucial for customer loyalty and retention, and for maintaining a positive brand reputation.

Examples

- **Net Promoter Score:** Measures the likelihood that a customer will reference the customer service brand to a friend or family member.
- **Customer Effort Score:** Measures how much effort customers need to exert to get their issues resolved.
- **Customer Satisfaction (CSAT):** Average reported satisfaction of customers.
- **Bottom Box:** Percentage of customers that report their satisfaction to be below a certain threshold.

4.4.7 PRODUCTIVITY AND FINANCIAL KPIS

What: They measure the financial efficiency of the operation by tracking productivity and operational billing efficiency. Their focus is on ensuring that the resources are utilized efficiently and aligned with financial targets.

Why: These KPIs are essential for optimizing the cost structure, ensuring that clients are billed accurately, and driving the financial performance of the operation toward the financial targets.

Example

- **Bill to Pay Productive:** The percentage of billable hours (hours billed to the Client by TP) compared to the total login hours from the CEs.

4.5 Management Control System

The Management Control System should be understood as a set of standardized reports that support operational leaders in managing operations, providing insights for governance meetings (as outlined in TOPS) and supporting LSS, transformation initiatives, and the strategic plan for each account. This system is a fundamental element for guiding Operational Leaders to ensure the quality of their deliverables, with actions based on facts and tailored to actual needs as indicated by insights from the Management Control System.

The TOPS Management Control System is divided into two key components:

- Reporting to monitor the adoption and execution of TOPS.
- Reporting to manage operational performance.

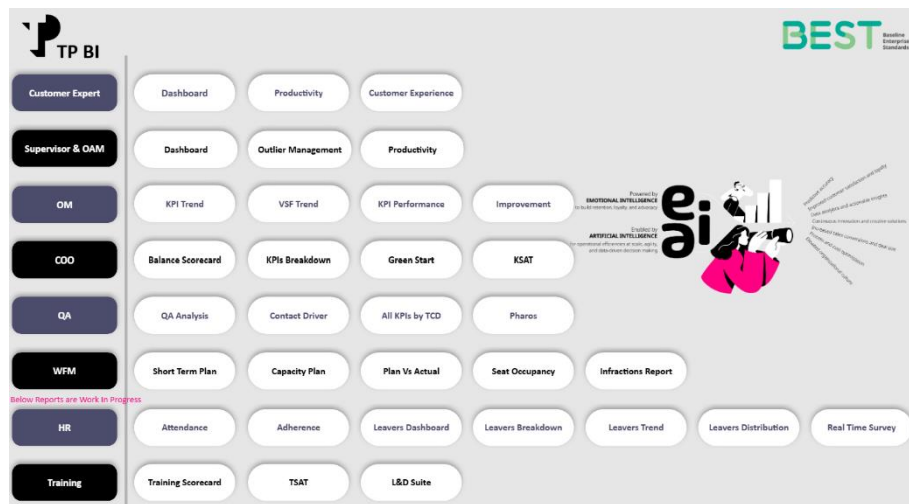

This chapter outlines the list of reports that support both components, and the reports discussed in this chapter are expected to be followed unless a project demonstrates their inapplicability. This means that all reports must be deployed and accessible for every operation, and all roles mentioned in the TOPS team structure must be knowledgeable about these reports, understand their purpose, and be trained in how to use them effectively to support their deliverables.

4.5.1 OPERATIONAL PERFORMANCE MANAGEMENT

Reporting Accessibility and Visualization Requirements

TOPS requirements for operational reporting availability and visualization align with BEST BI standards and definitions. It specifies that certain reporting visualizations must be available at various levels: for the CE layer, for Supervisors and OAMs, and for OM and above. CEs should only have access to the defined reporting views relevant to their role, while higher-level roles can implement broader sharing and visibility criteria.

- **CE View: individual** views allowing the CEs to access their own performance, comparing it against targets across multiple KPIs. It also shows their ranking within the team (e.g., rank, quartile vs. overall service/LOB, and outliers vs. the remaining team under the same Supervisor).
- **Supervisor and OAM:** must have access to team view providing the same view as the CE' individual view, but for the entire team and to VSF & Outlier Management View: This view enables Supervisors and OAMs to track metric variations by service, LOB, and team. It also provides quartile data (measured by service/LOB for all agents, not just those within the Supervisor's team).
- **OM Views:** This view offers the OM a high-level understanding of KPIs for the service and allows them to track the evolution of these KPIs over time.

Mandatory Metrics for Operational Reporting (Non-Operational Specific)

- **VSF:** Is the metric TP utilizes to determine the degree of variance in a process by comparing the standard deviation to the mean.
$$VSF = \frac{\text{Standard Deviation} \times 6}{\text{Average}}$$
- **Outlier classification** (at service and/or LOB level) for CEs
- **Impact:** This metric should be included in the operational reporting to describe the impact of each CE compared to targets. It can be calculated at any level of each element's total deviation, weighted by the interactions handled by each element (e.g., CE, Supervisor, etc.). Please see more details on the Outlier Management view below.
- **Quartiles:** This is important for setting targets. Quartiles within the service should define internal targets for CEs. These targets are dynamic and should be adjusted based on time periods. It is recommended to define weekly targets to push the team.

Best Practices for Operational Reporting Usage

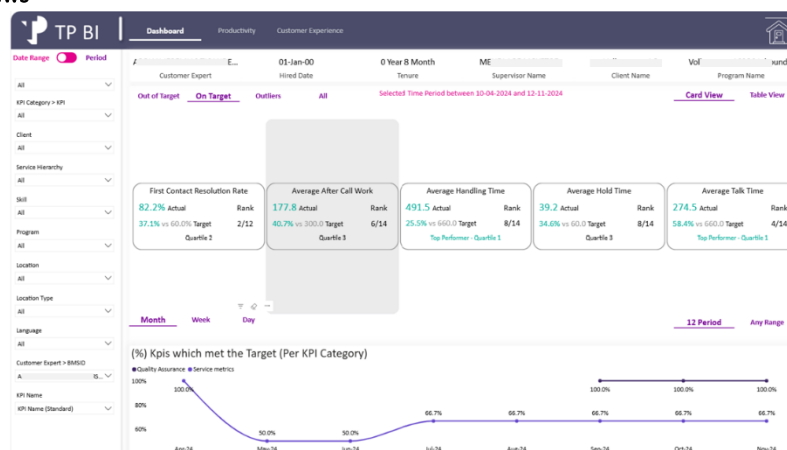

Relevant Notes:

- When utilizing operational reporting, you must exclude CEs with less than 30% volume. For these cases, the volume threshold will be marked as "Not Applicable."
- For the VSF, we exclude new hire CEs (those with 0-30 days of tenure) from the VSF calculation. The new hire CEs should be coached more frequently and require a different approach. Their target setting should align with the learning curve, focusing on how they can achieve targets within the first 90 days of operations. If we include them in the VSF, they will likely fall into the outlier category in most cases, which could defocus efforts from coaching tenured CEs and addressing their issues.

Partial list of reporting visualizations defined in BEST BI

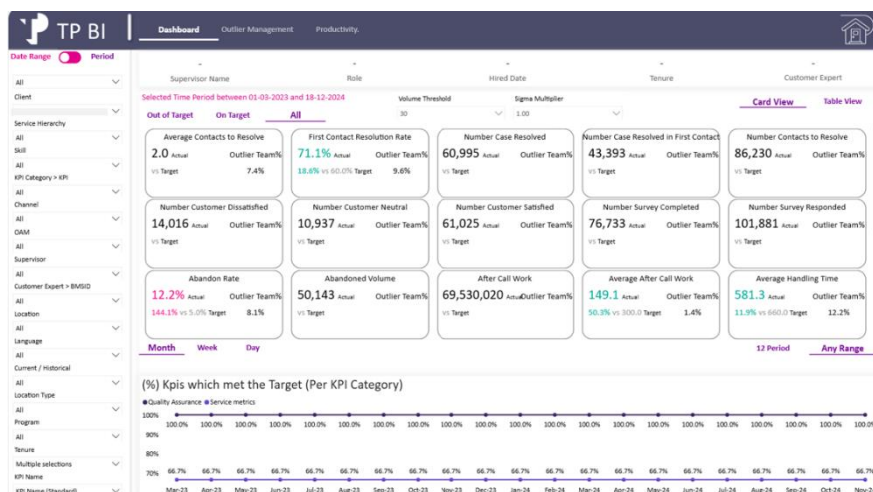

BEST BI introduces the best practices for KPI visualization, aligning with TOPS' required analysis and requirements for various TOPS events and preparations.

CE Reporting Views

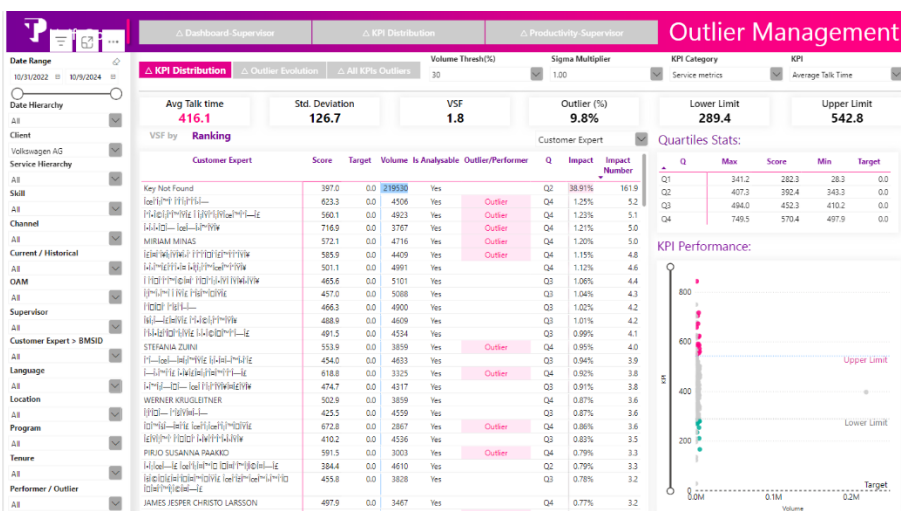

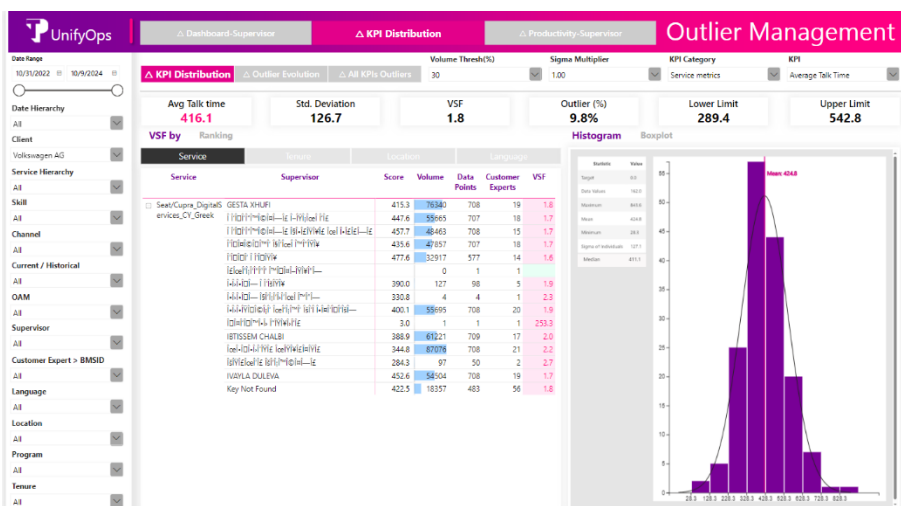

Supervisor and OAM View

- Individual view

- Outlier Management

- Outlier Evolution View

4.5.2 ADOPTION AND EXECUTION OF TOPS

For supporting the operations to monitor the adoption of key TOPS events, global reporting is generated. The tools listed below include a set of predefined views that enable monitoring of TOPS adoption:

- Operations using RISE as Event Management platform: [Power BI](#)
- Operations using BMS as Event Management platform: [Pharos - TOPS 24 Executive Summary - Power BI](#)
- Operations using TOPS App as Event Management platform: connect with the Global TOPS Team.

As part of the TOPS compliance process, teams are required to understand and utilize the metrics included in the global reporting tools linked above, as these are essential for supporting operations to monitor adoption of the defined TOPS events and their frequency.

Although different reporting tools are used, the metrics across them remain similar, regardless of the event management platform. Key metrics for monitoring TOPS adoption must stay consistent. These metrics are required for global teams to approve exceptions when operations request to implement a different platform. Approval to not use a defined platform will only be granted in specific cases, and having these reporting elements is crucial for supporting the exception process.

While the reporting tools mentioned above remain the source of truth for supporting operations and monitoring TOPS adoption, it is important to retain the following points:

1. **Reporting Access:** Operations teams are required to understand and have access to these metrics in a format that best suits their needs. The recommended approach is to use the global reports and notify the global teams of any identified improvements that could enhance overall reporting quality.
2. **Change Requests:** TOPS communities may submit change requests to the global TOPS team for improvements.
3. **Compliance Measurement:** The overall compliance of TOPS and its adoption is measured through global audits and self-assessments, not by the available global reports, which focus solely on supporting operations to track the on-demand adoption of key events. As we mature, this on-demand tracking will begin to automate some of the items currently assessed manually in global audits or self-assessments. Efforts are underway to connect the data points from these global on-demand reporting adoption events into the compliance system.
4. **Reporting Enhancements:** The global reporting continues to be enhanced. As more events become measurable through event management platforms, they will be included in these reports. For example, today, events such as M3, MAP, and others are produced in Excel for those using RISE or BMS, so we cannot measure their adoption via global reporting. As we continue to incorporate all events into a proper management platform, more comprehensive reporting will evolve, ensuring all events are mapped. This is exemplified by the TOPS App reporting, which supports all events and offers more immersive reporting compared to BMS or RISE.

Below is a brief description of the key metrics included in the global reporting tools for monitoring TOPS adoption across event management platforms:

OM Responsibility:

- **OAM Mid-Month Review:** Each OM is expected to complete at least 1 Mid-Month Review: OAM Dev & M3 per OAM/month. This metric shows how the OM meets that target. E.g. 50% means that only half of the OAM received a mid-month review.
- **OAM MPR:** Each OM is expected to complete 1 MPR per OAM/ month. This metric shows how the OM meets that goal. E.g. 50% means that only half of the OAM received their MPR.
- **OAM Touchpoints:** By combining the OAM Dev & M3 Reviews with the MPR, each OM is expected to complete at least 2 reviews with each OAM/month. This metric shows how the OM meets that expectation. E.g. 80% means that, on average, each OAM received 80% of the expected reviews.

OAM Responsibility:

- **SUP Shadowing:** Each OAM is expected to complete 1 SSF with each Supervisor / month. This metric shows how the OAM meets that minimum requirement.

- **SUP Observation:** Each OAM is expected to complete 1 SOF with each SUP / month. This metric shows how the OAM meets that minimum requirement.
- **SUP Shadowing & Observation:** Each OAM is expected to complete 1 SSF and 1 SOF session with each SUP every month (total 2). This metric tracks how OAM fulfills that requirement across all assigned SUPs. E.g. 80% means that, on average, the OAM completed 1.6 out of the 2 required events per SUP.
- **SUP Mid-Month Review:** Each OAM is expected to complete 1 event: SUP Dev & MAP Review with each SUP / month. This metric shows how the OAM meets that target. E.g. 50% means that only half of the SUP received their review.
- **SUP MPR:** Each OAM is expected to complete 1 Monthly Performance Review (MPR) per SUP / month. This metric shows how the OAM meets that goal. E.g. 50% means that only half of the SUPs received their MPR.
- **SUP Touchpoints:** by combining the weekly reviews and the MPR, each OAM is expected to complete at least 2 reviews with each Supervisor per month. This metric shows how the OAM meets that expectation. For example, a score of 80% means that, on average, each Supervisor received 80% of the expected reviews, that is, about 2.4 out of 3 reviews were completed. This suggests that some review sessions were missed during the month.

Supervisor Responsibility:

- **CE Dev Plan:** The CE Development Plan (CEDP) must be updated at least once per month, ideally before the MPR. Although the update is monthly, the CEDP is a living doc that should be used throughout the month to support the SUP's continuous development of their CE's.
- **CE Coaching:** SUP Coaching Expectations: New hires and outliers: Min 3 /month; Other CEs: Min 1 /month. This metric measures the percentage of required coaching sessions completed by the SUP. This metric measures the percentage of required coaching sessions completed by the SUP. A score of 75% means the SUP completed 75% of the expected sessions, indicating some CEs did not receive the full number of sessions required. The monthly coaching target for SUPs average at program level is 1.5 sessions, based on the assumption that 25% of the team consists of new hires and outliers requiring 3 sessions, and 75% consists of other CEs requiring 1 session.
- **CE MPR:** Each SUP is expected to complete 1 MPR per CE / month. This metric shows how the CE meets that goal. E.g. a score of 50% means that only half of the CEs received their MPR.
- **CE Touchpoints:** The metric measures monthly 1:1 touchpoint between SUPs and CEs, combining SUP coaching (3 sessions/month for new hires and outliers, 1 session/month for other CEs) and MPR (1 sessions/month/CE), with a score indicating the percentage of completed sessions. The target at the program level is 2.5 sessions, as it comes 1.5 from coaching and 1 from MPR.

Key TOPS event adoption score (all roles):

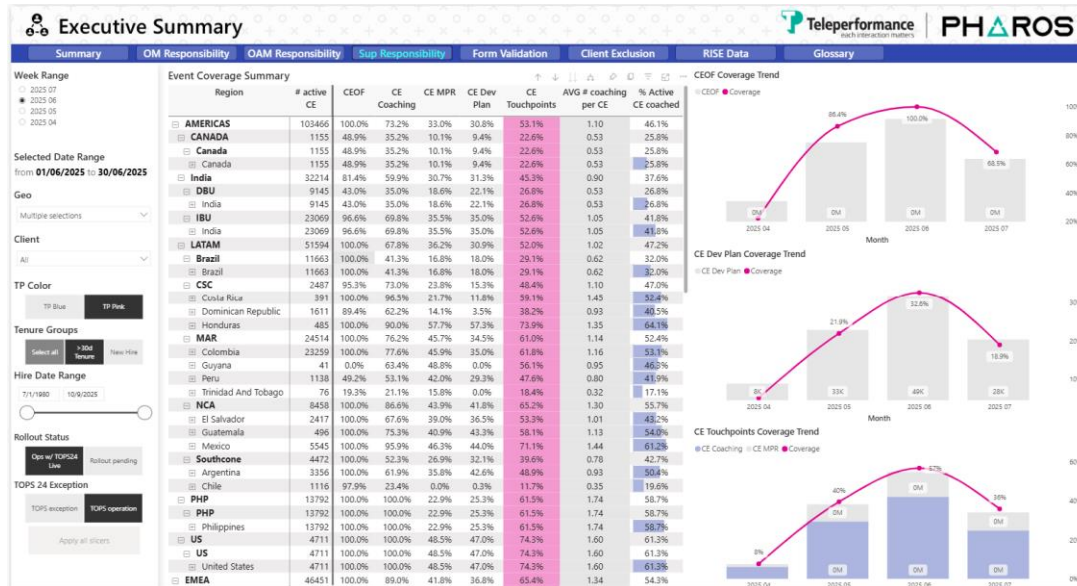

This metric shows how well all required activities are being completed. Each activity is weighted by how often it should happen, and the score reflects overall compliance with all expectations. 100% means all required actions were completed as expected.

Please refer to the tools above to learn more about global TOPS reporting, which will assist you in monitoring on-demand adoption of your operations and exploring additional available metrics.

4.5.3 PHAROS: MEASUREMENT ADOPTION FOR BMS BASED OPERATIONS

Below is a snapshot of some of the views available in Pharos, which allow the user to drill down to the program and individual level.

<

4.6 Meetings Cadence and Communication

Below is a high-level summary of the mandatory minimum attendance and frequency requirements for the operational roles, as outlined by the BEST requirements for various support functions.

Capacity Planning Review (Refer to [BEST WFM](#) for details)

- **Minimum Required Frequency:** Weekly.
- **Objective:** To review staffing requirements and new hire requests, as well as to define the implications and needs for forecasting, staffing, scheduling, and real-time management.
- **Mandatory operational attendance:** OM, OAM.

Monthly Calibration Session (Refer to [BEST QM](#) for details)

- **Minimum Required Frequency:** Monthly.
- **Objective:** To ensure all evaluators (Supervisors, Quality Analysts, and Trainers) who evaluate interactions and provide coaching - are calibrated in terms of scoring guidelines.
- **Mandatory operational attendance:** OAM, Supervisors (if performing QA Monitoring).

Weekly Quality Review (Refer to [BEST QM](#) for details)

- **Minimum Required Frequency:** Weekly.
- **Objective:** Drive the alignment between quality, training, and operations, and ensure follow-up on the M3 actions.
- **Mandatory operational attendance:** OM, OAM.

5 TECH AND AI FOR OPERATIONAL EXCELLENCE

This chapter highlights the importance of leveraging TP's robust technology portfolio and teams to enhance operational performance. It provides an overview of essential tools that should be considered for implementation when they offer value for our employees, clients, and TP.

5.1 Introduction

When there is clear value for our employees, TP, and our Clients, we must consider piloting and testing the appropriate solution. Today, more than ever, TP has a strong and robust technology team ready to support and assist you in deploying technologies that can add significant value to your business.

Below are four highly recommended technologies for your operations that you should be aware of, along with their potential and use case applications.

Please engage with your local TOPS POC or your local transformation and technology team to receive support, learn more, and get started!

5.2 TP Client

Purpose: TP's omnichannel solution that seamlessly combines knowledge management, workflow, multilingual support, and cutting-edge AI services to deliver differentiated customer experiences across various communication channels.

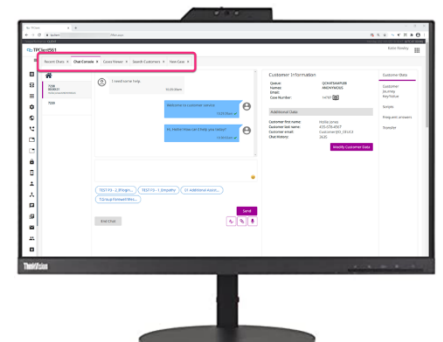

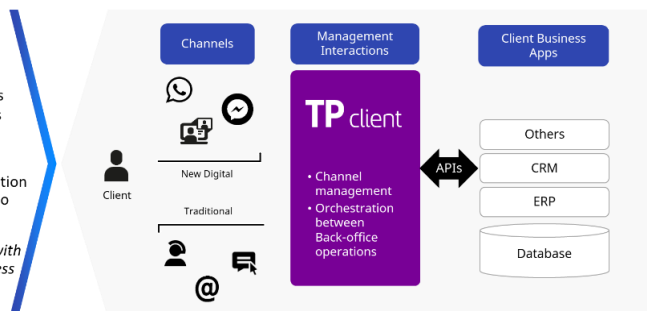

TP Client's infrastructure is sustained into an ecosystem of microservices which allow for seamless integration in operations independently of the main systems of our client or TP.

CLIENT'S GOALS

To improve the customer experience by providing the traditional and new channels preferred by their customers

An efficient stand-alone solution or complementary solution to manage several channels

TP Client can be integrated with business applications to access customer data or perform operations.

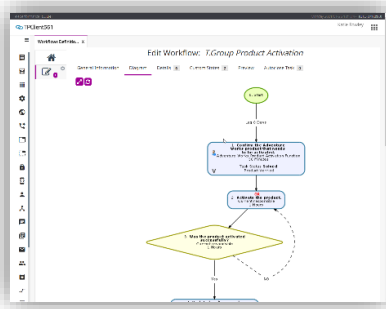

Operational Benefits:

- **Seamless experience for customers and CEs:** TP Client simplifies handling customer interactions across various channels, ensuring smooth experience for customers and an efficient solution for CE. It is modular and flexible, allowing you to add the channels and features you need.
- **Promote team organization:** Organizing the CE into groups by channels, language, skills, line of business, etc. and setting up the best routing options to ensure operational efficiency and accountability. User Groups can be assigned as responsible for cases and tasks so TP Client can disseminate the workload among CEs using routing models.
- **Workflow, Knowledge and Productivity Management:** TP Client's custom, automated, workflows manage pending issues and automatically assign responsibility for case resolution. It also includes knowledge management functions.

Additionally, through TP's microservices ecosystem, it is now possible to leverage its full capabilities independently on the program/client configuration by:

- Integrating seamlessly with existing systems through its robust API.
- AI-enabled microservices availability as:
 - Advanced translation services and StoryfAI integration break down language barriers for global communication.
 - Simplify information overload with AI-powered Mail2Keypoints and Mail2Summary.
 - Turn lengthy emails into concise summaries and actionable insights.
 - Leverage the power of TP Client's GenAI to easily create content and analyze data, driving smarter decisions and better outcomes.

Common Update

Once a User clicks on a Case, it belongs to them and other Users in the User Group will not have the option to work on it.

Common No Update

Once a User clicks on a Case, they can work on it and all the other Users in a User Group can still see the Case and work on it as well. After seeing the Case, a User may decide not to work on it and close it, making it available for another User to take responsibility.

Rotating

TP Client distributes work to Users in a User Group in a sequence. Example: If Agents A, B and C belong to a User Group, as Cases are generated, Case 1 is assigned to A, Case 2 to B, Case 3 to C, Case 4 to A, Case 5 to B and so on.

If the *Recent Agent* setting is enabled, new cases will go to the agent who previously worked with the customer.

The number of Cases assigned to each Agent can be defined or it can be left as an unlimited value.

Take Next

Using the *Group Take Next* menu item, a list of the Take Next queues that the User belongs to will appear, allowing them to enter a Ready state for each queue. Once a User enters a Ready state for a queue, they will begin to receive Cases from the queue.

Tasks that are expired or about to expire will be disseminated to the group before new Tasks.

Preferred agents and related Cases will be prioritized, and TP Client will give those cases preference to the agents that are logged in.

Video: New Case management UI/UX

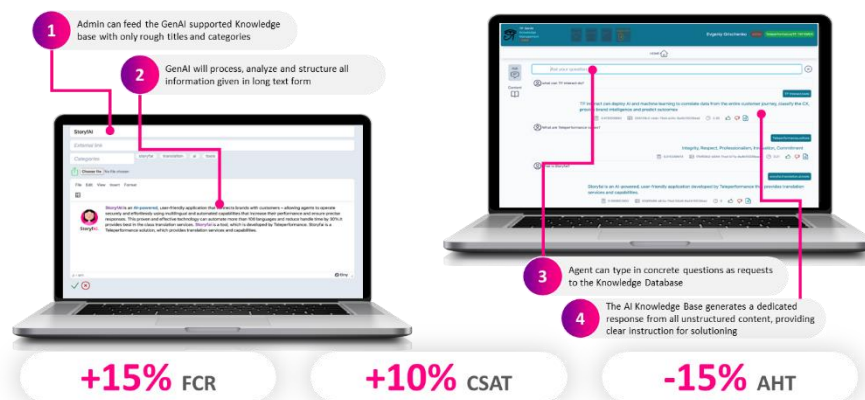

+ Finish pending Case before receiving new one. + Prioritize Case Picking | Priority Weight

Gen AI Knowledge Base Feature

One of TP Client features is the knowledge base. TP Client integrate offers a knowledge base solution that can be integrated with AI that offers summarization and organizes the content based on users' requests using an automated system that self-learns from previous patterns and engagements.

The tool works through subsequent cycles of iterations between the user and tool, where the user engages in a conversation with this knowledge base through a question, and it replies with a personalized answer, in a natural "human" tone conversation. These cycles can be repeated in order to further detail or adapt the questions and answers, as if it was a "normal" human-to-human dialog.

5.3 TP Gamification

Purpose: Create a fun and dynamic learning environment to enhance employee experience. Gamification enhances performance management with features that set goals, track real-time productivity, and promote learning through engaging microlearning. It fosters engagement by recognizing and rewarding employees for their achievements and provides personalized coaching and mentoring to help employees improve their skills. By combining top talent with intelligent technologies, we consistently achieve the business outcomes our clients expect.

Operational Benefits:

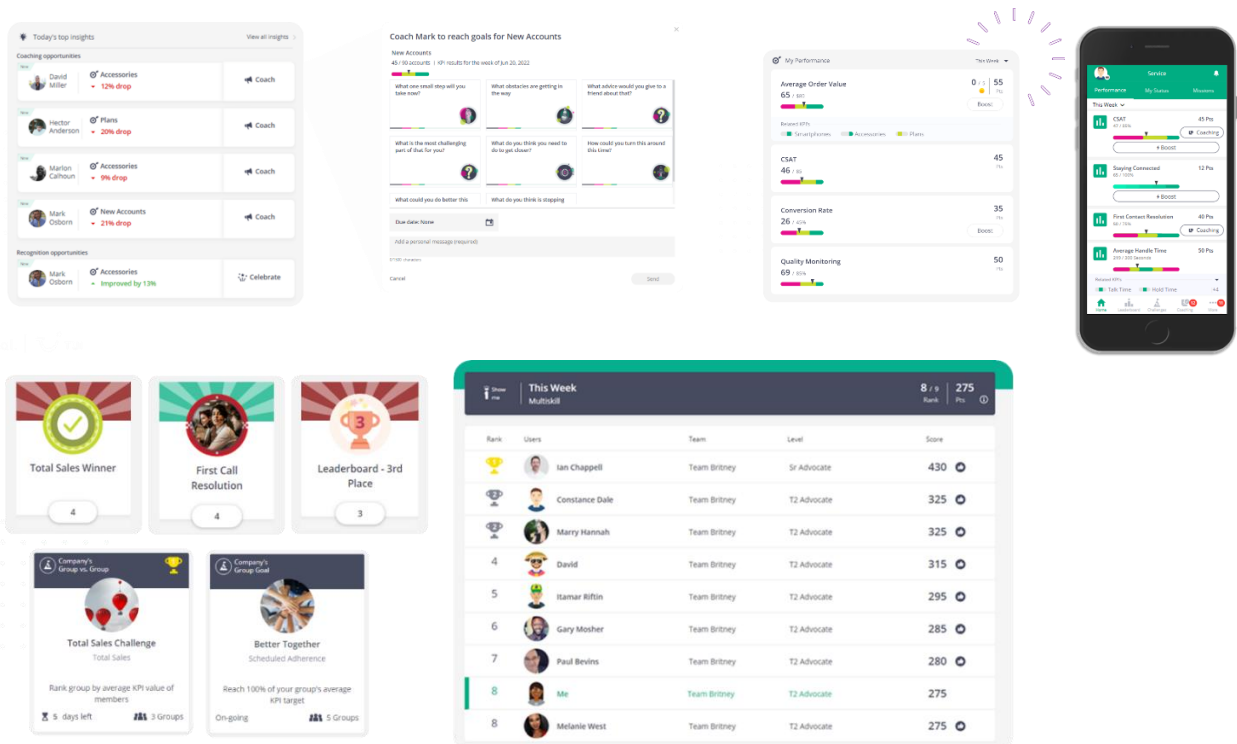

Maintaining the performance and motivation of the teams is one of the most important, yet challenging, aspects of managing an operation. The hurdles that can arise, especially when managing high volumes of customer interactions, as well as the lack of incentives can impact performance, motivation, efficiency, and customer experience. Embracing gamification effectively addresses these challenges by maintaining high levels of engagement from the employees and aligning goals by:

- Boosting knowledge retention and employee engagement during training.
- Creating a seamless learning process.
- Improving employee experience through personalized coaching.
- Gathering valuable feedback to address areas of improvement.

How does TP Gamification work?

TP Gamification applies game-design elements and principles in the day-to-day operation creating a fun and competitive culture and motivating CEs to complete quests and compete with their peers to achieve their goals. The screen captures below shows:

- **Leaderboard:** Displays CE performance compared to the team.
- **Individual Quests:** Personal challenges defined by the Supervisor (e.g., complete 200 sales in one week).
- **Personal Goals:** Tracks individual goals and performance attainment

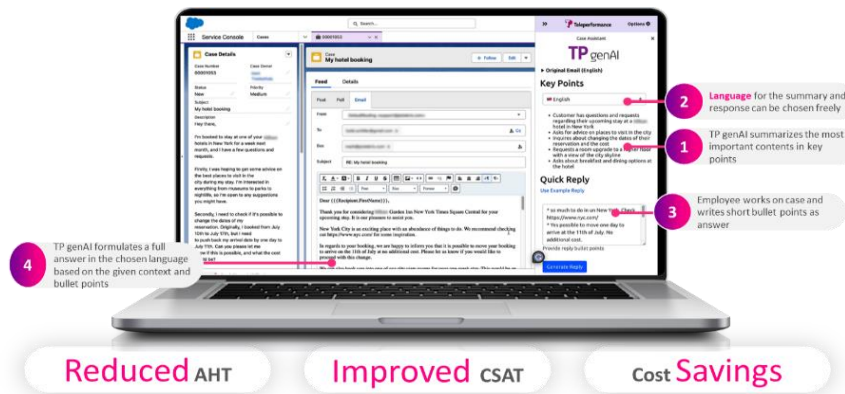

5.4 TP Power Steering

Purpose: Empower CEs with Generative AI to optimize their work, reduce the need to absorb extensive product knowledge, and allow them to focus on customer empathy, thereby enhancing the brand experience on scale.

TP Power Steering employs GenAI to offer real-time responses across touchpoints and knowledge management-based solutions balanced with human oversight to ensure ethical applications and empathy to provide more personalized support.

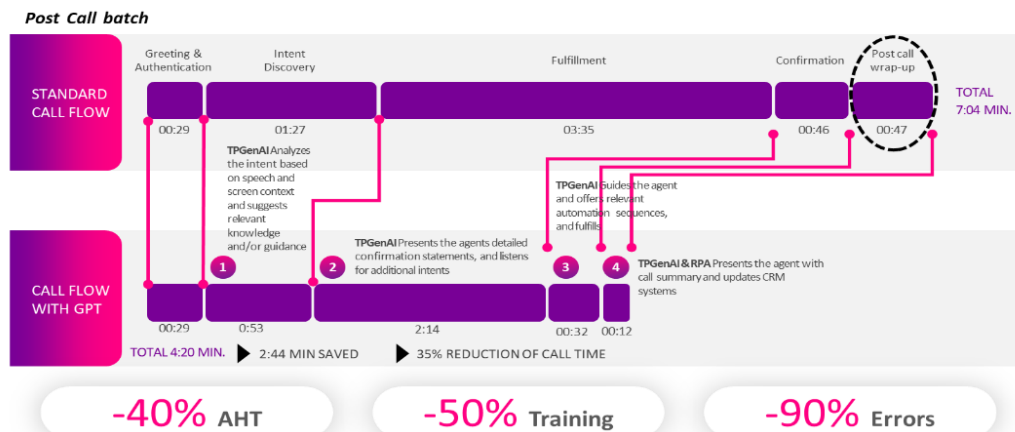

Tools overview: As shown in the image below, the TP Power Steering is displayed as a sidebar on the CE's screen and can be customized. The indicative set of features it might contain must be agreed upon and configured during the implementation process. These features might include:

- Language Translation.
- Summary of customer intent.
- Generate customer replies based on pre-loaded bullet points.
- Connect to knowledge base and provide CE value support information to deal with customer interactions (based on displayed written interaction of connect with voice and speech recognition).
- Provide suggestions for upscale and customer retention guidelines.

Operational Benefits and Use Cases:

- **Mail-to-Summary:** Promotes time optimization by providing CE with a summary of customer interactions, suggesting answers, and generating responses based on bullet points. In addition to saving time, when connected to a customer knowledge base, it enhances the accuracy of responses, thereby improving overall customer satisfaction. It may also be designed to increase the likelihood of sales and customer retention.
- **Call-to-summary:** Analyzes the customer's intent based on their speech and screen context and suggests relevant knowledge or guidance for the CE. It presents CEs with confirmation statements, listens to additional intents, and suggests relevant automation. Integrated with RPA, it can present CE with a call summary and update the CRM, as well as customize the call. The overall solution helps to optimize AHT and ACW, with potential benefits for quality and sales. Below is an illustrative description of the impact of TP Power Steering with the application of the call-to-summary use case:

5.5 StorifyAI

Purpose: Bridge worldwide conversations with multilingual support equipped with AI accuracy and human touch. StoryfAI is an AI-powered, user-friendly application that connects brands with customers – allowing teams to operate securely and effortlessly by using multilingual and automated capabilities that increase performance, ensure accuracy, and foster engagement.

StorifyAI is part of TP's Customer Interactions Management (CIM) ecosystem and due to its microservices architecture is a highly flexible solution that can be used in all operations despite if TP Client or a Client's CRM usage.

Operational Benefits:

StoryfAI translates languages and detects sentiment during conversations, filters profanity, transcribes real-time interactions across channels including voice, stores automated responses, and provides native-language services and support in almost any part of the world.

Such technology allows operations to optimize the usage of resources by cross-blending resources across multiple markets, a practice that could be successful for operations with global practices that are common across markets and other operations.

The screenshot displays the StoryfAI interface, which is used for managing customer service interactions. It features a chat window on the left, a central incident management table, and a right-hand panel for translation and replies.

Chat Window (Left): Shows a conversation with an anonymous user. The user asks for help with a Western Digital drive. The assistant responds, identifying the user as Todd S and offering assistance.

Incident Management Table (Center): A table listing various incidents. The columns include Status, Response Interval, Resolution Interval, Source, Reference #, Subject, and Actions. The table shows a mix of open and answered incidents.

Primary	Status	Response Interval	Resolution Interval	Source	Reference #	Subject	Actions
Open	Open	0h 0m	0h 0m	Web Console Live Chat	230530-000013	Chat Session	Open Print

Right Panel: Contains a 'Translation' section with a dropdown menu set to 'English'. Below it, there's a 'Reply' section with a text input field and a 'Translate Reply' button. A link to a troubleshooting article is also visible.

6 TOPS AUDIT

6.1 Introduction

The audit process at TP, which includes both self-evaluation and global audits, is outlined on the [TOPSBEST Certification - Home](#), with details of the TOPS Audit Grid—used in both types of audits—available in the following chapter and through the SharePoint link above.

6.2 Global Audit

Global audit coverage may vary each year based on specific criteria but generally prioritizes operations in countries with the highest number of CEs, while fewer audits are conducted in countries with smaller CE populations. Within each country, operations are selected based on a defined list of sites with higher CE counts, supplemented by a random selection of others.

As part of the TOPS 24 launch, the global audit approach shifted from auditing clients representing 80% of total CEs in the top 10 countries to auditing a random selection of operations within clients that represent 85% of the total CE population—enhancing both coverage and representativeness.

Subsidiary Size	Selection criteria
Over 5K CEs	10 random sample clients represent 85% and/or are Global Clients regardless their size.
Between 3-5K CEs	4 random sample of clients represent 85% and/or are Global Clients regardless of their size.
Between 300 and 3K CEs	1 random client above 75 HC, Largest Client and/or are Global Clients regardless of their size.

Note: Before random selection, priority given to new clients implemented within the last 12 months (with >3 months production).

6.3 Self-Assessment

For self-assessments conducted locally by each subsidiary, the requirement applies to all clients representing 85% of the subsidiary's total revenue, as well as to all non-domestic clients, regardless of their size or inclusion in the 85% group. For the remaining 15%, it is up to the local CEO to decide whether to apply for the self-assessment or request a global audit.

6.4 Audit Grid

The audit grid below applies to both global audits and self-assessments. It focuses on assessing the efficiency of operational processes as well as evaluating the achievement of client KPIs. The overall score is a weighted composition, with 60% derived from the process assessment and 40% from KPI achievement and improvement.

The evaluation grid is divided into items and sub-items. Each sub-item includes a detailed description of the compliance evidence. The score for each sub-item contributes to the main item's final score, which is calculated as the average of all sub-item scores.

Operations must evaluate all items. "Not Applicable" should only be used if the project provides evidence that compliance is impossible.

Please refer to the [TOPSBEST Certification - Documents](#) to access the latest version of the TOPS Global Audit and respective detailed scoring criteria.

6.5 TOPS Audit KPIs

Operational KPIs account for 40% of the TOPS audit score. The operation must report on KPIs established across five categories: service, quality, efficiency, sales (if applicable), and customer experience.

- **Compliant:** To meet the KPIs, performance must meet the target for at least four of the last six months or show continuous improvement over the past six months prior to the audit or self-assessment.
- **Partially Compliant:** If the KPI meets the target for two or more months and an action plan (LSS/PSS) is in place, it can be considered partially compliant.
- **Not compliant:** If no action plan is available and the KPI does not meet the target, it will be considered non-compliant.

Please refer to the [TOPSBEST Certification - Documents](#) to access the latest version of the TOPS Global Audit and respective detailed scoring criteria.

7 CHANGE LOG

7.1 Summary of changes: Version 25.0.0

#	Impacted Role	Impacted Event	Change Type	Impact Type	Focus on	Change Request Details	Agreed decision	Actions	Approved by	Impact Audit Grid
1	General	Document Steering Committee	Change	General	User clarification	Update TOPS Reference Document Steering Committee	Clarification: The wording has been amended to clarify that contributions to the initial version are not required for upcoming versions.	L2. Improve document / user guide	Christian B. Agustin G.	No
2	General	TOPS Resources	Change	Application	User clarification	Improve summary of all available resources available for the teams to deploy and get enabled on TOPS.	Summary of available resources: Include an entire section for this purpose.	L2. Improve document / user guide	Fábio Luís	No
3	General	TOPS Digital Support Ecosystem	Change	Tools	User clarification	Lack of clarity about digital tools can be used to deploy TOPS.	Summary of Digital Tools for TOPS: Created entire section for TOPS Digital ecosystem.	L2. Improve document / user guide	Christian B. Fábio Luís	No
4	General	TOPS Exclusions and Exceptions	Change	Application	User clarification	Lack of clarity about TOPS application exceptions (if by size, client network, others).	Exceptions Application Clarifications: Included an entire section to provide detailed information and clarify the cases that have been approved as exceptions.	L3. Review Process (not required LS approval)	Fábio Luís	May be
5	General	Monitoring TOPS adoption - RISE	Change	General	Alignment	No mention was included regarding the global reporting tool for operations using RISE.	Created global RISE reporting: Created a global reporting tool to monitor the adoption of TOPS in RISE. The report has been published and referenced in recent communications.	L3. Review Process (not required LS approval)	Fábio Luís	No
6	General	MCS - Operational Performance Management	Change	General	User clarification	Alignment with BEST BI Requirement: when TOPS V24 was launched BEST BI was not yet published, only some recommended views of reporting where mentioned as practice.	Alignment with BEST BI: replaced some views in the document to align with updated BEST BI views.	L2. Improve document / user guide	Fábio Luís	No
7	General	General	Change	General	User clarification	Multiple items need improvement in wording, fluency, updated reference links, and nomenclature.	Improved wording, updated references and links, and revised nomenclature.	L2. Improve document / user guide	Fábio Luís	No
8	Multi-role impact	MSV	Change	General	Alignment	Improve clarity on the requirements for compliance.	MSV Compliance Requirements: Clearly referenced in the document.	L3. Review Process (not required LS approval)	Fábio Luís	No
9	Multi-role impact	Remote Work integration: video requirements	New	Tools	Alignment	Integration of the video communication required for remote teams in TOPS.	Video requirement for remote operations: An additional section has been added to the TOPS document, outlining the requirement for teams to be provided with the necessary hardware to connect via video. Remote staff must also complete the eLearning available in Saba on guidelines for engaging in a remote environment via video.	L3. Review Process (not required LS approval)	Fábio Luís	Yes
10	Multi-role impact	Event Frequency & Sequence Summary	Change	Frequency	User clarification	There's a lack of a clear table summarizing the event frequencies, the exact number of events per month for each event, and a lack of clarity regarding the sequence in which the events occur throughout the month.	Summary table of TOPS event frequency: Include one chapter with clear details on the event frequency ("Events excel file").	L2. Improve document / user guide	Fábio Luís	No
11	OD and above	M3	Change	Application	Alignment	Make the attendance of the OD (OM's direct manager) mandatory for the M3.	OD or similar required to attend M3.	L4. Review Process (require leadership approval)	Christian B. Agustin G.	Yes
12	OD and above	CES	Change	Application	Optimization	OD/VP/COO Requirement: No longer mandatory requirement for these roles.	OD and above exclusion from CES for compliance purposes.	L4. Review Process (require leadership approval)	Fábio Luís	No
13	OM	Operational KPI Definition	New	Application	Alignment	Unclear about the requirement regarding PI and KPI alignment in operations.	Definition of Ops KPIs as a clear requirement for OM, ensuring operational reporting aligns with these KPIs, and the same KPIs must be used for audit purposes.	L3. Review Process (not required LS approval)	Fábio Luís	Yes
14	OM	M3	Change	Application	Alignment	Additional clarity is required on the M3 preparation process, and remove the need to have mandatory deck to support M3 focus more on the M3 tracker as requirement.	Improved the M3 preparation process by incorporating gap analysis as part of the event and pre-identifying root causes before the meeting. Additionally, simplified documentation by using the M3 Tracker as the sole tool for tracking action plans.	L3. Review Process (not required LS approval)	Fábio Luís Karim Zakhari	May be
15	OM	M3	Change	Application	User clarification	Need to improve clarity regarding the OM's responsibilities and accountability for the event and more alignment with M3 tracker.	Improved clarity the OM is the session owner, responsible for organizing, leading, and scheduling the meeting, as well as ensuring the attendance of their direct manager for guidance and support.	L2. Improve document / user guide	Fábio Luís	No

#	Impacted Role	Impacted Event	Change Type	Impact Type	Focus on	Change Request Details	Agreed decision	Actions	Approved by	Impact Audit Grid
16	OM	M3	Change	Application	User clarification	Improve detail on compliance requirements for the M3 completion.	Additional details to ensure M3 generate the correct value for the business and need for PSP: by emphasizing the need for plans to address off-target KPIs and evidence that a PSP was opened when required, as per LSS triggers. Also, improved the guidelines for successful event execution in the M3 Preparation section.	L2. Improve document / user guide	Fábio Luís	Yes
17	OM	M3	Change	Application	Optimization	Remove the need to create support deck for this session, instead increase the promotion and usage of defined operational elements, such as M3 and standardized reporting views, to streamline processes.	M3 Tracker and defined Ops Reporting as key requirements: Eliminated the need to build support decks and instead focus on promoting the use of the M3 tracker and standardized operational reporting to enhance agility.	L3. Review Process (not required LS approval)	Fábio Luís	Yes
18	OM	M3	Change	Alignment with other standards	Alignment	Uncertainty remains about whether the New Hire Success Meeting is still required, given that the topic is now introduced in the M3.	New Hire Success meeting no longer required as part of BEST TD: New Hire Performance and learning curve in M3, aligning with BEST TD. As a result, the New Hire Success meeting is no longer required, as M3 covers all necessary requirements.	L3. Review Process (not required LS approval)	Marina Madgy	No
19	OM	Weekly OAM Dev & M3 Review	Change	Frequency	Optimization	Weekly frequency is too demanding for the OM, followed research about the value.	Moved from weekly to monthly: The event has been renamed and is now called the "Mid-Month Review."	L4. Review Process (require leadership approval)	Christian B. Agustin G.	Yes
20	OM	CES	Change	Frequency	Alignment	Frequency the events for OM when multiple accounts.	Clarified monthly requirement per OM and not per account: one per OM per month, not one per account when multiple accounts under same OM.	L3. Review Process (not required LS approval)	Fábio Luís	Yes
21	OM	CES	Change	Application	Optimization	Ease the requirement of monitor 10 interactions.	Defined a minimum requirement of 5 interactions, with flexibility for the CES executor to increase the sampling as needed.	L3. Review Process (not required LS approval)	Fábio Luís	Yes
22	OM	CES	Change	Application	Optimization	Clarify about the CES action plan and connection with M3 and streamline registration.	CES action plan alignment with M3: The last activity of the CE's protocol (Action Plan) can be directly documented and registered in the M3 Tracker to avoid duplication of work. There is no need to document the action plan in the CE's Excel file protocol and then transfer those actions to M3. Simply by recording the CE's outcomes in the M3 Tracker, compliance is ensured.	L3. Review Process (not required LS approval)	Fábio Luís	Yes
23	OAM	Weekly SUP Dev & MAP Review	Change	Frequency	Optimization	Weekly frequency is too demanding for the OAM, followed research about the value.	Moved from weekly to monthly: The event has been renamed and is now called the "Mid-Month Review."	L4. Review Process (require leadership approval)	Christian B. Agustin G.	Yes
24	OAM	Meetings & Governance - QA, WFM	Change	Alignment with other standards	User clarification	Lack of clarity regarding mandatory attendance at the meeting, as required by BEST QM and WFM, as outlined in the document.	Updated mandatory operational attendance requirements to include the following events: capacity planning, monthly calibration sessions, and weekly/quarterly reviews.	L2. Improve document / user guide	Fábio Luís	Yes
25	Supervisors	Multiple	New	Application	Alignment	TOPS does not reflect certain events defined by B2B Sales Operational requirements for Supervisors.	Introduced specific mandatory requirements for B2B Sales Operations: 1/MPR frequency updated to weekly; 2/Daily Huddles introduced as a mandatory event; 3/ Weekly Team Meetings also introduced as a mandatory event.	L4. Review Process (require leadership approval)	Fábio Luís; Daniel Trueman	Yes
26	Supervisors	Coaching	Change	Frequency	Optimization	Coaching: weekly	Coaching: monthly (minimum) + weekly New Hires & outliers	L4. Review Process (require leadership approval)	Christian B. Agustin G.	Yes
27	Supervisors	Feedback on Failed interactions	New	Alignment with other standards	Alignment	There is a lack of clarity regarding Supervisors' involvement in providing QA feedback for critical fails and failed interactions, as well as limited engagement from EI in delivering Feedback is not defined as a specific task or event within the TOPS flow for Supervisors.	Feedback on failed interactions included as part of Sup Responsibilities in TOPS: The document has been updated to clarify the division of responsibilities between Operations and QA: critical fails must be addressed within 24 hours, and failed interactions within 48 hours.	L3. Review Process (not required LS approval)	Fábio Luís Karim Zakhari	Yes
28	Supervisors	Coaching	New	Application	User clarification	Strategic Seating not included in the TOPS 24as a tool.	Strategic seating included in both the Outlier Management section and the Coaching section.	L3. Review Process (not required LS approval)	Fábio Luís	Yes
29	Supervisors	CEOF & Coaching	Change	Application	Optimization	Main areas of improvement/feedback: 1. Use of different forms for CEOF and coaching 2. Absence of a follow-up model 3. Lack of prioritization for outliers and new hires 4. Inability to track best practices related to positive behaviors	Applied improvements: 1. One single form to document Observation and coaching, that includes follow up model 2. Applied different coaching intensity for outliers and new hires vs. Tenured CE.	L3. Review Process (not required LS approval)	Fábio Luís Karim Zakhari	Yes
30	Supervisors	CEOF & Coaching - Trust & Safety (T&S)	New	Application	Alignment	Behaviors in observation/coaching form not tailored for T&S needs.	Specific coaching form created for T&S: Added form with behaviors list for Trust & Safety.	L3. Review Process (not required LS approval)	Fábio Luís	Yes

7 NEXT VERSION HIGHLIGHTS

We are dedicated to the ongoing improvement of this document, incorporating valuable updates and enhancements with each new version. The table below outlines the key content and features planned for upcoming releases.

1. Integrate the new TOPS platform into the document.
2. Include findings from the Emotional Intelligence pilot.
3. Define glide path and target-setting guidelines.
4. Detail the handover protocol for transitioning new hires from Training to Operations.
5. Outline performance incentive models for CEs, including model references, construction guidelines, and support documentation.
6. Full integration of additional Cloud Campus (remote work) specifics.
7. Summary of COPC vs. TOPS.
